Social information
Governance information
Annexes

How to read this statement

In accordance with the Corporate Sustainability Reporting Directive (CSRD), our 2024 Annual Report integrates financial and non-financial data. The non-financial data is part of this separate section, entitled Sustainability Statement.

Our Sustainability Statement is structured according to the four sections in the European Sustainability Reporting Standards (ESRS): “General disclosures”, “Environmental information”, “Social information” and “Governance information”. Under each of these four sections, you will find the details on the sustainability related matters that are material to OMV Petrom, in line with the results of our Double Materiality Assessment.

Below is a mapping of our material topics and the related ESRS chapter in the Sustainability Statement.

Environment

Chapter	Material topic*
Climate change	Climate change mitigation
	Energy
Pollution	Pollution of air
	Pollution of soil
Water	Water
Biodiversity and ecosystems	Direct impact drivers of biodiversity loss
Process safety	Process safety

Social

Chapter	Material topic*
Own Workforce	Working conditions
	Training skills and development*
Workers in the Value Chain	Working conditions
	Other work-related rights
Affected Communities	Communities economic, social and cultural rights

Governance

Chapter	Material topic*
Business conduct	Corporate culture
	Supplier relationship
Economic value	Economic value
Cybersecurity	Cybersecurity

*may consist of sub-topic or sub-sub-topic as defined by ESRS 1 standard

The structure of the Sustainability Statement chapter is guided by the requirements of ESRS and mostly follows the same format.

- **Governance**, where we describe our governance processes, controls and procedures we use to monitor and manage our material impacts, risks and opportunities.
- **Strategy**, where we describe the approach we take on the respective topic; the interaction of our material impacts, risks and opportunities with our strategy and business model; and how the interests and views of our stakeholders were taken into account when building the strategy;
- **Impact, risk and opportunity management** is the section where we detail the policies we have in place on the respective topic as well as the actions we take in relation to our material impacts, risks and opportunities. For some social topics, you will also find information about how we engage with our stakeholders and channels where our stakeholders can raise concerns;
- **Metrics and targets** include the key performance indicators we use to manage our material negative impacts, advancing positive impacts and managing material risks and opportunities.

At the beginning of each paragraph, you will find the coding of the respective ESRS Disclosure Requirement that it addresses.

General disclosures

Starting with 2024 reporting year, the sustainability related information is included in the Sustainability Statement, section of the Annual Report, and was prepared in accordance with the European Sustainability Reporting Standards (ESRS) introduced by the European Corporate Sustainability Reporting Directive (CSRD) and transposed into the Romanian legislation under Ministry of Finance Order no. 85/2024, which also amended the Ministry of Finance Order 2844/2016. In line with ESRS requirements, OMV Petrom updated its materiality analysis in 2024. This Statement also includes disclosures required by Article 8 of the EU Taxonomy Regulation (Regulation EU 2020/852).

In relation to the preparation of this Sustainability Statement in accordance with ESRS standards, KPMG Audit SRL has performed a limited assurance engagement on the Sustainability Statement, in accordance with International Standard on Assurance Engagements (ISAE) 3000 (Revised), Assurance engagements other than audits or reviews of historical financial information (ISAE 3000 (Revised)).

Basis for preparation

[DR BP-1] **General basis for preparation of sustainability statements**

[ESRS 2-BP-1.5a] This Sustainability Statement has been prepared on a consolidated basis at the OMV Petrom Group level, headquartered in Coralilor Street, no. 22, sector 1, postal code 013329, Bucharest, Romania.

[ESRS 2-BP-1.5b i] The consolidation scope of the Sustainability Statement is the same as for the financial statements, covering all consolidated entities for which OMV Petrom holds a stake of more than 50% and holds operational control. In case of Health & Safety metrics, these are presented for OMV Petrom Group as well as for OMV Petrom Group including OMV Petrom Global Solutions S.R.L. (Romanian entity accounted using equity method).

[ESRS 2-BP-1.5b ii] For details regarding the OMV Petrom Group structure, please see Note 32 from the Consolidated Financial Statements.

[ESRS 2-BP-1.5c] Within the present Sustainability Statement, OMV Petrom has also included information related to its upstream and downstream value chain, where identified as relevant as part of the Double Materiality Assessment. Relevant information related to the value chain includes material impacts, risks and opportunities that may affect or arise from upstream and downstream business relationships, policies and actions that extend over value chain and metrics, that may consolidate value chain data. Where information presented includes value chain information it shall be stated so, unless explicitly required by the data point.

[ESRS 2-BP-1.5d] OMV Petrom has not used the option to omit a specific piece of information corresponding to intellectual property, know-how or the results of innovation.

[ESRS 2-BP-1.5e] OMV Petrom has not opted to withhold information about impending developments or ongoing negotiations due to the exemption allowed in articles 19a(3) and 29a(3) of Directive 2013/34/EU.

[DR BP-2] **Disclosures in relation to specific circumstances**

[ESRS 2-BP-2.9, ESRS 2-BP-2.9a] When preparing this sustainability statement, the same definitions of time horizons as prescribed by ESRS 1 paragraph 6.4 were used. As such, the short-term time horizon refers to the period adopted as the reporting period in the financial statements; the medium-term time horizon: from the end of the short-term reporting period up to 5 years; and respectively the long-term time horizon: more than 5 years.

[ESRS 2-BP-2.10a, b, c, d]. Scope 3 GHG emissions – encompasses indirect emissions that occur in the upstream value chain, which are reported under Category 3.1 Purchased good and services, as well as in the downstream value chain, namely the emissions reported under categories 3.10 Processing of sold products and 3.11 Use of sold products.This data is estimated using indirect sources.

[ESRS 2-BP-2.11a, b] In 2024, all disclosed data related to quantitative metrics and monetary amounts were measured.

[ESRS 2-BP-2.13a, b, c] Where changes in the preparation and presentation of sustainability information occurred compared to the previous reporting period, such changes are disclosed alongside the respective metrics.

[ESRS 2-BP-2.15] For entity-specific topics, OMV Petrom has considered the application requirements (AR) provided by the ESRS, while also relying on GRI standards for disclosures.The references to the Taskforce on Climate-Related Financial Disclosures (TCFD) were discontinued, due to the overlap of these disclosures with the European Sustainability Reporting Standards. For the Double Materiality Assessment, SASB and GRI were used as a reference to identify potentially relevant topics. This Sustainability Statement also serves as our Communication on Progress for the United Nations Global Compact (UNGC).

[ESRS 2-BP-2.16] OMV Petrom has incorporated by reference the following data points:

- General disclosures - ESRS 2-SBM-1.40 f: assessment of current significant products and services and significant markets and customers groups in relation to sustainability goals
- Climate change - E1-SBM-3.19 b,c: how resilience of strategy and business model in relation to climate change has been conducted and results
- Climate change - E1-3.29 c; ESRS 2 MDR-A69b: CAPEX for actions taken in 2024
- Pollution - [MDR-A.69 b] CAPEX for actions taken in 2024
- Economic value, ESRS 2 MDR-A 69b:Total Capex allocated in 2024 in addressing the action regarding OMV Petrom's support in Romania's energy transition through the 2030 Strategy;

Governance

[DR GOV-1] **The role of the administrative, management and supervisory bodies**

[ESRS 2-GOV-1.21a] OMV Petrom is governed in a two-tier system, with the Executive Board managing the daily business and operations of the Company, under the supervision of the Supervisory Board.

The Supervisory Board is made up of nine non-executive members appointed by the General Meeting of Shareholders, with the exception of interim members, who are appointed by the Supervisory Board itself. One of the Supervisory Board members serves as President, after being appointed by the Supervisory Board. The current Supervisory Board tenure is until April 2025.

The Supervisory Board appoints the Executive Board for a four-year term. Currently, the Executive Board is comprised of five members whose tenure is until April 2027.

[ESRS 2-GOV-1.21b] In accordance with the provisions of the collective bargaining agreement and the applicable laws, the Trade Union representatives are invited to attend the meetings of the Supervisory Board, as well as of the Executive Board when collective lay-off projects are approved and can raise matters regarding the rights and interests of the employees.

[ESRS 2-GOV-1.21c] All Supervisory Board members have wide experience in the sectors that are relevant for the company, from energy to mobility and chemicals, working for various companies directly in the core business or in finance, legal or consulting for the sector. Their experience covers a wide array of geographies, with a focus on the Central and Eastern Europe (CEE) region and, for part of the members, on Romania. For more information on their professional qualifications, please also see the relevant section in the Corporate Governance Report.

The five members of the Executive Board of OMV Petrom have a vast experience in the energy sector. Two of them have worked across several geographies, while the other three have worked mainly in Romania or the CEE area. All Executive Board members have a deep understanding of the local markets in which the company is active. For more information on their professional qualifications, please also see the relevant section in the Corporate Governance Report.

[ESRS 2-GOV-1.21d]

Percentage by gender and other aspects of diversity for Supervisory Board members

		2024	2023
Male	%	89	89
Female	%	11	11
<30	%	0	0

		2024	2023
Male	%	60	60
Female	%	40	40
<30	%	0	0
30-50	%	40	40
>50	%	60	60
Total	**%**	**100**	**100**

[ESRS 2-GOV-1.21e] 33% of Supervisory Board members are independent.

For more information on the independence of Supervisory Board members please also see the relevant section in the Corporate Governance Report.

[ESRS 2-GOV-1.22a] The bodies that are responsible for oversight over the company's impacts, risks and opportunities are:

- The Executive Board, through specific task-forces which include all Executive Board members and internal subject matter experts relevant for the sustainability matters discussed in regular meetings.
- The Supervisory Board, through the Audit Committee, with a focus on the EWRM (Enterprise-Wide Risk Management) risks.

[ESRS 2-GOV-1.22b] The Internal Rules for the Executive Board state that the Executive Board shall provide for a risk management system corresponding with OMV Petrom Group's requirements. The potential impacts and risks can be linked with the risks assessed across the organization according to the enterprise-wide risk management process. The Executive Board also approves the company's strategy

and objectives, the annual risk management strategy, as well as the hedging measures in the Group. The Executive Board reports to the Supervisory Board regularly, in a timely manner and comprehensively, all relevant issues of business development, including the risk situation and the risk management of the Company.

The responsibilities of the Audit Committee, as a body of the Supervisory Board, as per its Terms of Reference, are, amongst others, to:

- undertake an annual assessment of the system of internal control, while the assessment should consider the effectiveness and scope of the internal audit function, the adequacy of risk management and internal control reports to the Audit Committee, management's responsiveness and effectiveness in dealing with identified internal control failings or weaknesses and the submission of relevant reports to the Supervisory Board and
- evaluate the efficiency of the internal control system and risk management system.

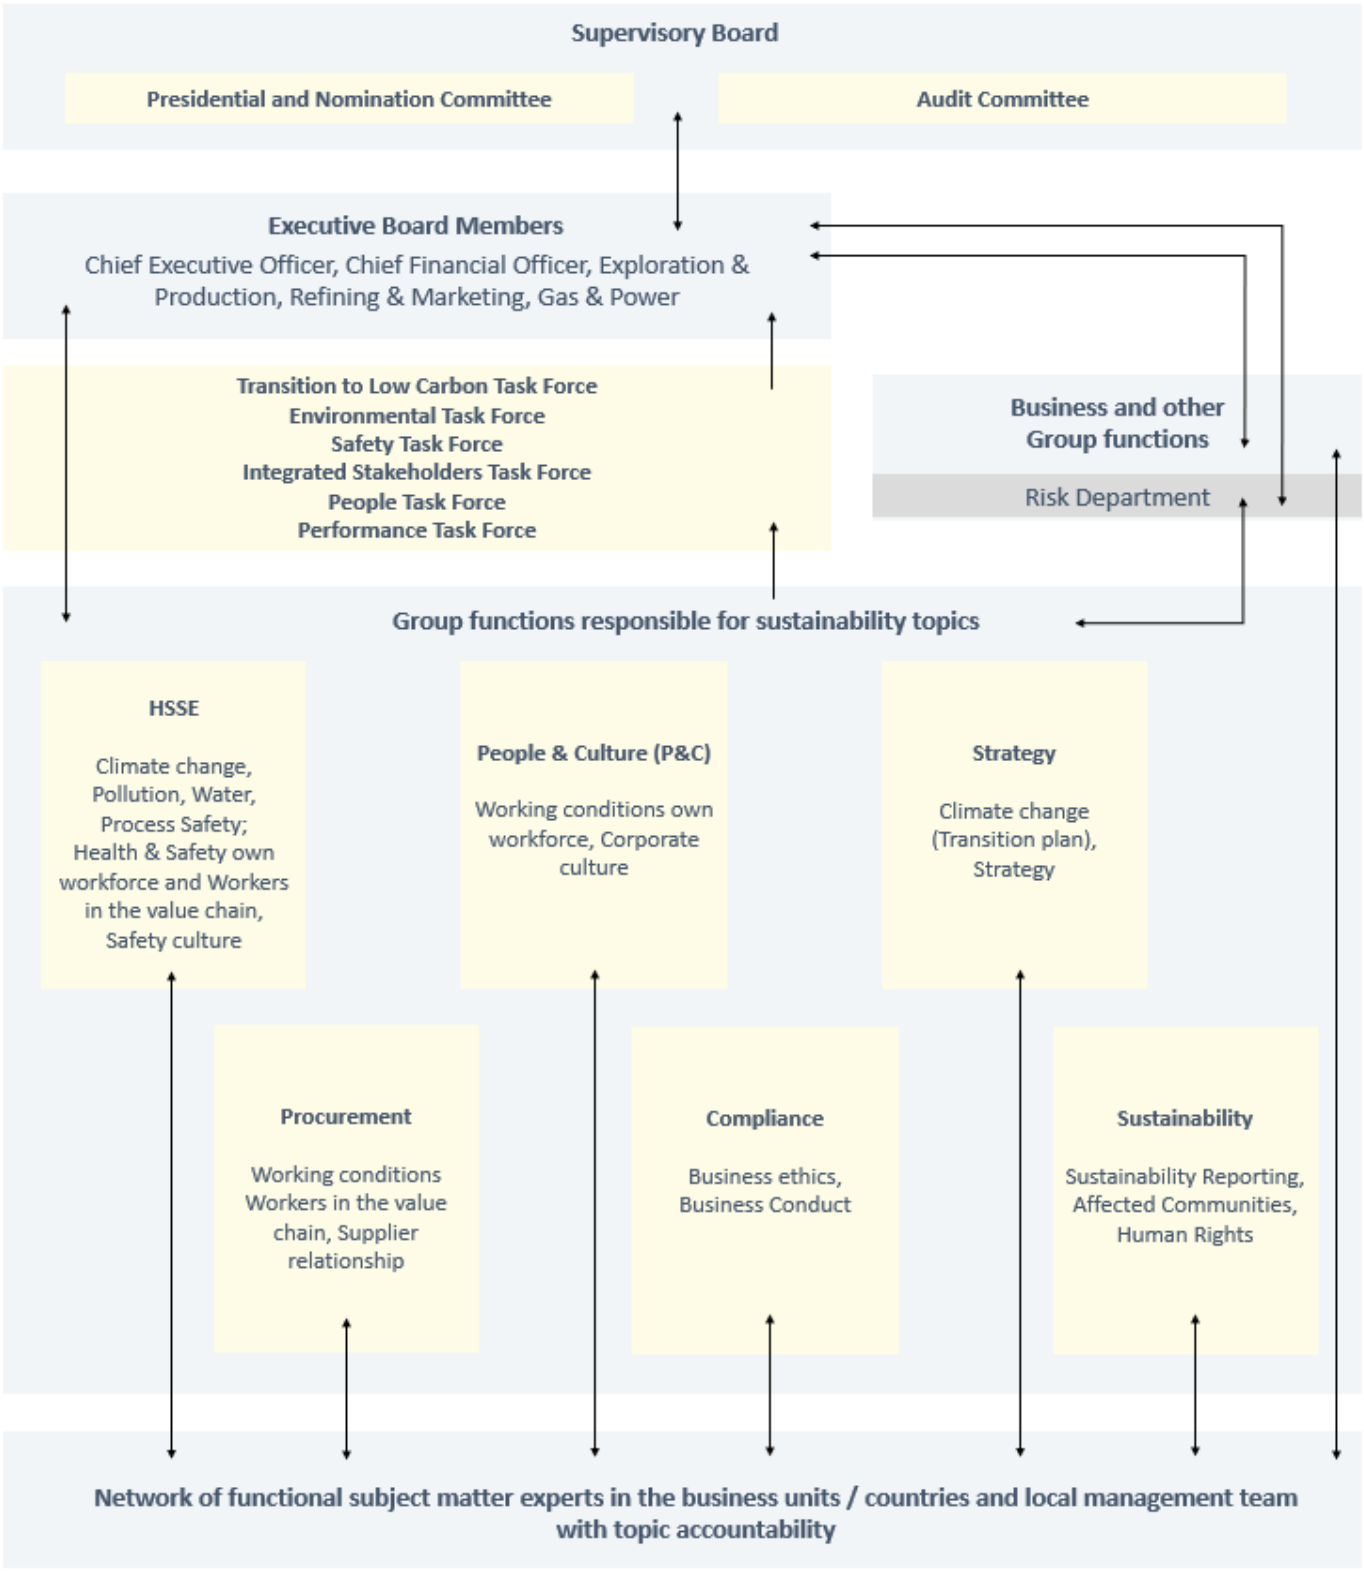

[ESRS 2-GOV-1.22c i] The two-tier system of management allows the company to assess all material economic, social, environmental and governance impacts, risks and opportunities.

The Executive Board manages the organization's impact on the economy, environment, and society. This responsibility includes supervision over all material topics outlined, such as climate change, human rights, and safety, among others.

The Executive Board determines the development strategy and policies, ensures adherence to corporate governance principles within the Group and provides regular updates to the Supervisory Board on all important business matters, including strategy implementation, company risk profile, and risk management. Matters related to sustainability, including key material aspects like Health, Safety, Security, and Environment (HSSE), climate change, and business ethics, are discussed in Executive Board meetings and integrated into the Company's daily operations and management processes.

Sustainability topics are on the agenda of regular Executive Board meetings, as well as of OMV Petrom's dedicated task-forces. The Executive Board manages, monitors and oversees impacts, risks and opportunities by approving the Sustainability Statement. The Supervisory Board exercises its oversight role by approving the Sustainability Statement.

The Sustainability sub-department is part of the Communication and Sustainability Department that reports directly to the CEO and it is responsible for the integration, coordination, and publishing of the Sustainability Statement. See below a graphical representation of the reporting lines to the administrative, management and supervisory bodies, in relation to sustainability matters.

Network of functional subject matter experts in the business units / countries and local management team with topic accountability

The Audit Committee oversees the main risks and mitigation measures and evaluates the efficiency of the internal control and risk management systems, validating their adequacy. The Audit Committee reviews and makes recommendations to the Supervisory Board in relation to matters such as financial reporting, external auditing, internal auditing, internal controls, risk management, as well as compliance, conduct and conflicts of interest. The Audit Committee oversees, among others, the following sustainability areas: Climate change, Affected communities and Own workforce.

[ESRS 2-GOV-1.22c ii] The subject matter experts within OMV Petrom monitor the implementation of policies, actions, targets and the progress on metrics, in relation to material impacts, risks and opportunities. They report to the heads of functions who own the material topics, which in turn report to the respective Executive Board members.

[ESRS 2-GOV-1.22c iii] Management of impacts, risks and opportunities is covered by policies in place, described in the topical chapters of the Sustainability Statement, related to environmental, social and governance topics. Such policies, that include a broad set of internal regulations, are monitored through the internal control system available at OMV Petrom Group level.

Moreover, through the existing taskforces, progress on impacts, risks and opportunities is monitored by the Executive Board. More details on roles and responsibilities of the Executive Board are included in the relevant section of the Corporate Governance Report.

[ESRS 2-GOV-1.22d] Accountability for the OMV Petrom Sustainability Framework and its targets resides with the Executive Board. Specific functions are nominated as responsible for setting and implementing OMV Petrom's short- and medium-term sustainability targets within various task-forces. The setting and monitoring of targets is performed regularly through the special task-forces and regular Executive Board meetings. The Supervisory Board oversees the setting of climate related targets and progress towards them within their meetings. For all other sustainability matters, the Supervisory Board oversees the target achievement as part of the Sustainability Statement approval process.

[ESRS 2-GOV-1.23] All sustainability-related matters are managed by experts in their respective fields, from HSSE to People & Culture or Compliance. These internal subject matter experts and the managers of the functional teams responsible for the respective sustainability topic are part of the special task-forces mentioned above, which give oversight to the Executive Board on sustainability matters.

In cases where the Executive Board needs to gain a deeper understanding of the required skills, assessments are performed either internally or with external support. For instance, the Low carbon business capabilities assessment program was undertaken to identify the skills necessary for the company to be prepared for new lines of business supporting the energy transition.

[ESRS 2-GOV-1.23b] The skills and experience available in the company are related to sustainability impacts, risks and opportunities through the actual qualifications and expertise of the people involved in proposing and reviewing policies, actions and targets.

[DR GOV-1 G1] **Business conduct matters**

[G1.GOV-1.5a] Business conduct topics are regularly included in discussions at Supervisory Board level, in Audit Committee meetings, ensuring ethical considerations are a constant focus in financial and operational oversight. This also ensures access to expertise on business conduct matters.

The Executive Board formally supports the Code of Business Ethics, which outlines a strict zero-tolerance stance on bribery, fraud, theft, and other corrupt activities.

[G1.GOV-1.5b] Members of the Executive Board receive continuous education and updates on business ethics, managed by the Compliance Officer through quarterly Executive Board reporting updates. Such reports may refer to policy developments in relation to business ethics, international sanctions, whistleblowing reports, various external consultant reports on matters related to business ethics, and other topics. Access to expertise related to business ethics is ensured through the Compliance Officer who reports directly to the CEO of OMV Petrom.

Additionally, every three years, the Executive Board members receive business ethics training. The training is facilitated directly by the Compliance Officer. The Compliance Officer can also attend Audit Committee meetings.

[DR GOV-2] **Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies**

[ESRS 2-GOV-2.26a] The Executive Board of OMV Petrom manages the organization's impact on the economy, environment, and society. This responsibility includes supervision over all material topics outlined in this Sustainability Statement.

The Executive Board of OMV Petrom is informed by the material topic owners and subject matter experts about the material impacts, risks and opportunities and the implementation of due diligence, and the results and effectiveness of policies, actions, metrics and targets adopted through its regular weekly meetings, as well as its task-forces. These task-forces are organized with varying frequencies depending on the topic, ranging from bi-monthly to quarterly or to every semester.

In 2024, the Executive Board was informed about all material impacts, risks and opportunities resulted from the Double Materiality Assessment in a stakeholder's management task-force meeting in Q3. Also, throughout 2024, the CEO and CFO had regular meetings with the internal subject matter experts to discuss material impacts, risks and opportunities, as well the policies, actions and targets to mitigate or advance them.

The Executive Board provides regular updates to the Supervisory Board on various business matters, including strategy implementation, actions, metrics and targets related to sustainability topics. In 2024, these topics included updates on Low Carbon business development, methane emissions and GHG targets.

[ESRS 2-GOV-2.26b] When making decisions on major transactions, the Executive Board of OMV Petrom considers a series of criteria: business strategic targets, financial metrics, risk profile, and climate targets impact. This set of criteria assists the Executive Board in objectively identifying and reviewing OMV Petrom's projects, enabling a comprehensive portfolio optimization across the Group in support of its strategic goals, including greenhouse gas emissions reduction pathway. The same criteria are applied when major decisions are submitted for approval to the Supervisory Board.

At OMV Petrom, we have also internally defined Sustainability CapEx as investments that meet either of two criteria: alignment with the EU Taxonomy Regulation or investments that assist in implementing OMV Petrom's 2030 Sustainability Framework.

[ESRS 2-GOV-2.26c] All impacts, risks and opportunities related to own operations, as listed in paragraph SBM-3.48 of this chapter, were addressed at Executive Board level in their various regular meetings or in task-forces throughout the year 2024.

All climate change related impacts, risks and opportunities are discussed during Supervisory Board meetings.

In 2024, all impacts, risks and opportunities related to Climate change, Affected communities and Own workforce were discussed in the Audit Committee, which is a consultative committee at Supervisory Board level.

[DR GOV-3], [DR GOV-3 E1] **Integration of sustainability-related performance in incentive schemes**

[ESRS 2-GOV-3.29a] The Executive Board remuneration at OMV Petrom consists of fixed and variable remuneration elements as well as benefits. The variable remuneration, which includes a Long-Term Incentive Plan (LTIP) and annual bonus, is aligned with the Strategy 2030 and places a strong emphasis on sustainability performance, including Environment, Social, Governance (ESG) related key performance indicators, such as carbon emission reduction.

For more information regarding the Remuneration Policy , please see the Corporate Governance Report under the Report of the governing bodies chapter.

[ESRS 2-GOV-3.29b] The Long-Term Incentive Plan (LTIP) focuses on sustainability targets and links the remuneration of the Executive Board members also to the achievement of the greenhouse gas emissions reduction target of OMV Petrom.

[ESRS 2-GOV-3.29c, ESRS 2-GOV-3.29d, E1-GOV-3.13] In LTIP, the GHG emissions reduction target of OMV Petrom has a weight of 25%. Increase of the proportion of women at management level has a weight of 10%.

Various Safety KPIs, including Zero-work related fatalities and Process Safety Event Rate and Total Recordable Injury Rate are included in the 2024 annual bonus scheme with a cumulated 15% weighting.

[ESRS 2-GOV-3.29e] The Remuneration Policy in place applies to the Executive Board and Supervisory Board since 2021. The Supervisory Board remuneration is fixed. Following the launch of the Strategy 2030, an updated Remuneration Policy was prepared by the Presidential and Nomination Committee and approved by the Ordinary General Meeting of Shareholders in April 2022, with a majority of 92% of votes cast.

The definition of the climate-related consideration is based on the reduction of direct GHG emissions (Scope 1) and indirect GHG emissions from energy purchased (Scope 2) from operated and/or majority owned assets in 2024 against 2019.

[DR GOV-4] **Statement on due diligence**

[ESRS 2-GOV-4.30; 32] OMV Petrom's mapping of the information provided in its sustainability statement about the due diligence process is provided in the table below:

Core elements of due diligence	Paragraphs in the Sustainability Statement
a)Embedding due diligence in governance, strategy and business model	i.ESRS 2 GOV-2: Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies; ii.ESRS 2 GOV-3: Integration of sustainability-related performance in incentive schemes; and iii.ESRS 2 SBM-3: Material impacts, risks and opportunities and their interaction with strategy and business model
b)Engaging with affected stakeholders in all key steps of the due diligence	i.ESRS 2 GOV-2; ii.ESRS 2 SBM-2: Interests and views of stakeholders; iii.ESRS 2 IRO-1; iv.ESRS 2 MDR-P; and v.Topical ESRS: reflecting the different stages and purposes of stakeholder engagement throughout the due diligence process
c)Identifying and assessing adverse impacts	i. ESRS 2 IRO-1 (including Application Requirements related to specific sustainability matters in the relevant ESRS); and ii. ESRS 2 SBM-3
d)Taking actions to address those adverse impacts	i.ESRS 2 MDR-A; and ii. Topical ESRS: reflecting the range of actions, including transition plans, through which impacts are addressed.
e)Tracking the effectiveness of these efforts and communicating	i. ESRS 2 MDR-M; ii. ESRS 2 MDR-T; and iii. Topical ESRS: regarding metrics and targets

[DR GOV-5] **Risk management and internal controls over sustainability reporting**

[ESRS 2-GOV-5.36a] The main features and components of the risk management and internal control systems in relation to sustainability reporting follow the OMV Petrom's Internal Control framework section, as described in the Director's Report, part of the Report of the governing bodies chapter.

In scope of risk management and internal controls in relation to sustainability reporting process are the environmental, social and governance areas.

[ESRS 2-GOV-5.36b] Our risk assessment and internal control systems are designed to identify, assess, and mitigate risks that could affect our financial and sustainability reporting. We perform periodic reviews for each end-to-end process defined in the risk and internal controls matrixes at least every three years, or sooner if triggered by internal/external factors. This approach enables us to detect emerging risks and update the existing ones, if needed, prioritizing risks based on materiality, process complexity, and likelihood of errors.

OMV Petrom's internal control framework encompasses policies, procedures, and controls that are reviewed periodically and updated to address risks and comply with regulatory requirements.

[ESRS 2-GOV-5.36c] Potential risks related to the sustainability reporting process refer mainly to completeness and accuracy of data used. In line with Internal Control System Directive, mitigation strategies are established, which consist in various control activities.

The Sustainability sub-department, together with support functions responsible for the content, perform various data checks, in order to ensure completeness and integrity of the data.

[ESRS 2-GOV-5.36d] Monitoring activities are ongoing, as part of OMV Petrom's internal control system framework.

The findings of such activities are assessed and communicated, and further mitigated through remediation actions, together with responsible internal functions.

[ESRS 2-GOV-5.36e] The Executive Board of OMV Petrom is responsible to establish an internal control system, including independent assurance functions. Internal audit function evaluates the effectiveness of the internal control system, during audits, based on the internal audit plan, and provides recommendation for improvements based on identified deficiencies.

The Audit Committee of the Supervisory Board evaluates the efficiency of OMV Petrom internal control system. Details on the main duties and powers of the Audit Committee, including its functioning, are described in the relevant section of the Corporate Governance Report.

A yearly presentation to the Executive Board and to the Audit Committee of the Supervisory Board is prepared, focused on the general framework, the execution of the annual work program and priorities for the next year, in relation to the internal controls system.

Strategy

[DR SBM-1] **Strategy, business model and value chain**

[ESRS 2-SBM-1.40a i, ESRS 2-SBM-1.40a ii] OMV Petrom's ambition is to lead the energy transition in Romania and South-East Europe, capitalizing on emerging markets opportunities, while delivering value for all its stakeholders. Our goal is to become a partner of choice for all the customer groups we serve: from retail customers of our filling stations, to gas and power wholesale customers represented by small, medium and large businesses in various industries, such as construction, aviation or oil companies.

Our Strategy 2030 sets out the path we plan to take to reach our ambitions, through three key pillars, which refer to the products and services we offer as well as the markets we serve.

- **Transition to low and zero carbon**

A greener and more diversified portfolio will be reached by investing in renewable power generation, biofuels, alternative mobility and by assessing the potential for other new technologies, such as carbon capture and storage (CCS), energy storage, geothermal energy, and biogas. All these will pave the way to achieving Net Zero operations (Scope 1 and Scope 2 emissions) by 2050 and will support our customers to decarbonize. Approximately EUR 3.7 bn is to be invested between 2022 and 2030 to ensure cleaner energy. These investments enable us to achieve the following by 2030:

- The largest new solar and wind power portfolio in Romania: installed capacity of ~2.5 GW, of which 60% solar and 40% wind.
- The first major producer of sustainable fuels in SE Europe: 300 kt/year production of biofuels supported by the 15 kt production of green hydrogen.
- A consolidated position as 1st choice mobility provider in Romania: more than 5,000 electric charging points (own and in partnership) to be installed in the operating region.
- Unique opportunities, in addition to renewables, sustainable fuels, e-mobility, such as: carbon capture and storage (CCS), energy storage, geothermal, biogas.

- **Grow Regional Gas**

Natural gas is a key enabler for decarbonization. In this regard, Neptun Deep is a strategic project for OMV Petrom, for Romania and for the region, with plans to develop 100bcm of natural gas. The extensive knowledge acquired in more than 40 years of offshore operations can help unlock potential for further growth beyond Romania, in the Black Sea region. In terms of our product portfolio, we will transform the oil-gas mix in our E&P portfolio, with gas expected to reach 70% in 2030.

- **Optimize traditional business**

While demand for green energy grows, traditional energy is expected to stay in demand due to the gradual nature of transition to greener energy. Therefore, OMV Petrom will continue to modernize and further integrate its current assets, to ensure security of energy supply and generate value.

For more information regarding our Strategy 2030: Transforming for a lower carbon future, please see the OMV Petrom Strategy 2030 chapter.

[ESRS 2-SBM-1.40a iii] Our own workforce plays a crucial role in the successful delivery and support of our company's strategy. Please see information on the headcount of employees by region in the Own Workforce chapter, DR S1-6 Characteristics of the undertaking's employees.

[ESRS 2-SBM-1.40a iv] OMV Petrom does not have any products and services that are banned in certain markets.

[ESRS 2-SBM-1.40d i] OMV Petrom is active in oil and gas exploration and production, processing, refining and marketing of refined petroleum products, as well as in power generation and marketing of gas and electricity. In 2024, the revenues derived from fossil-fuel related activities are

disclosed in note 19 “Sales revenues”, line “Total sales revenues” to the consolidated financial statements.

[ESRS 2-SBM-1.40d ii, iii, iv] OMV Petrom’ activities do not fall under division 20.2 regarding Manufacture of pesticides and other agrochemical products as per Annex I to Regulation (EC) no. 1893/2006. Also, the company is not active in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons), nor in the cultivation and production of tobacco.

[ESRS 2-SBM-1.40e, f] OMV Petrom aims to transform its portfolio of products and services in order to keep supplying the energy needs for today, while transitioning towards low and zero carbon. We have set targets for reducing the carbon footprint across all scopes and reaching carbon neutral operations (Scope 1 and Scope 2) by 2050.

The planned sustainability-related business portfolio goals are outlined in sections ESRS 2-SBM-1.40a i and ii.

Our sustainability-related goals address both internal and external stakeholders and they are reflected in our 2030 targets.

For targets and progress related to:

- Health and safety, training and development, human rights and level of engagement for own workforce, please see Own Workforce and Business conduct chapters.
- Health and safety for workers in the value chain and ESG screening of new suppliers, please see Workers in the value chain chapter.
- Yearly spend with local suppliers and affected communities’ coverage by social investments, please see Affected communities chapter.
- Carbon footprint reduction, please see Climate change chapter.

For details regarding the assessment of OMV Petrom’s products, markets and customer groups as of end of 2024, please see the Strategy 2030 section of the Annual Report.

[ESRS 2-SBM-1.40g] Our Sustainability framework is fully embedded in the 2030 Business Strategy, with a focus on transition to low carbon business, running responsible operations, fostering people & communities and innovation & digitalization.

Through 2030, we will continue to have as priority the health and safety of our employees, customers and partners.

As part of our 2030 commitments, we plan to assemble and maintain a skilled, diverse and committed team, while persistently creating a positive influence in our communities. OMV Petrom stands by the basic principles of a just transition, concentrating on social dialogue, protection, and retention, along with re-skilling or up-skilling of employees. The firm is devoted to fostering a diverse workforce and an inclusive work culture, which is considered critical to its success.

We endorse the development of technology, research, and innovative practices to facilitate broader incorporation of technologies that will help us realize our business and climate objectives. CCS has a key role to play in decarbonization, however the pace imposed by recently approved regulations at EU level is challenging. While we are working with our stakeholders to make CCS projects commercially viable, the development of CCS projects requires high investments, fit for purpose regulatory framework and public acceptance.

[ESRS 2-SBM-1.42, ESRS 2-SBM-1.42a] This section covers the key aspects of our business model and value chain included in the Double Materiality Assessment for the current reporting year.

OMV Petrom is the largest integrated energy producer in Southeastern Europe. The company is active along the entire energy value chain: from exploration and production of oil and gas, to refining and marketing of refined petroleum products, and further on to power generation and marketing of gas and power. The company is organized into three operationally integrated business segments Exploration & Production (E&P), Refining & Marketing (R&M) and Gas & Power (G&P).

Our company has a leading position in the fuels and natural gas markets in Romania and an important contribution to the country’s security of electricity supply.

In E&P, OMV Petrom is present in Romania and Bulgaria. In Romania, OMV Petrom’s E&P activities are centered around six local assets, operating 149 commercial oil and gas fields. These include both onshore and shallow offshore exploration and production, as well as deep offshore exploration. By the end of 2024, our portfolio included 395 million boe in proved oil and gas reserves. Annual hydrocarbon production reached 39.91 million boe, which included 2.65 million tons of crude oil and natural gas liquids and 3.18 billion cubic meters of natural gas. In the Han Asparuh block, Bulgaria, we signed an agreement to transfer a 50% interest, while maintaining our role as operator, and continue exploration activity.

In R&M, OMV Petrom operates the Petrobrazi refinery, which has a capacity of 4.5 mn tons per year and primarily processes domestically produced crude oil in order to obtain petroleum products, thus maximizing the company's integration value. Additionally, the Company continuously evaluates the economic benefits from processing imported crude oil. During 2024, around 35% of crude oil processed by OMV Petrom was imported.

We are present on the oil products retail market through a network of 778 filling stations located in Romania, Moldova Republic, Bulgaria, and Serbia. In some of our filling stations in Romania, Bulgaria and Serbia we complemented the offer to our customers by installing charging points for electric vehicles (end-2024: ~900 charging points, own and in partnerships).

In Gas & Power (G&P), we are engaged in electricity production, as well as gas and power sales. In Romania, we operate the Brazi gas fired power plant, which has a capacity of 860 MW. We carry out gas and power marketing operations in seven countries, while expanding market access in Romania's geographical proximity.

OMV Petrom's sales to third parties are split by geographical areas, Romania and Central and Eastern Europe represent the Group's most important geographical markets. 83% of the Group's total sales were in Romania in 2024, while the remaining 17% sales were registered in the rest of Central and Eastern Europe.

[ESRS 2-SBM-1.42b] OMV Petrom is present on relevant markets as a producer and supplier of crude oil and natural gas, petroleum products and electricity, thus contributing to energy security. Our activities strengthen Romania's and Southeastern Europe's security of supply, as well as the EU's energy resilience.

- Crude oil: OMV Petrom accounts for almost the entire oil production in Romania.
- Natural gas: OMV Petrom accounts for around a third of the gas production in Romania. Gas equity volumes are complemented with third party supply gas volumes, and are placed on the market, to industrial end-users, as well as to wholesalers, while also delivered to internal consumers (such as the Brazi power plant). In compliance with the legislation in force, OMV Petrom has been supplying volumes to the regulated market for households and district heating consumption since 2022 from its equity production.
- Petroleum products: These products are either produced in the Petrobrazi refinery or supplied from third parties and are sold to both Romanian and international markets. In 2024, our refined product sales accounted for approximately one third of Romania's demand.
- Electricity: In 2024, our Brazi power plant covered around 10% of the national power generation mix. For the full year, Brazi power plant net electrical output reached 4.9 TWh.

We are part of the Romanian social and economic fabric, as a major investor, employer and contributor to the state budget and also through our involvement in social causes that are relevant for the country, as mentioned in the Affected communities chapter. We will continue to invest to capture market opportunities, generating value for all stakeholders.

Our proposition to shareholders is clear: growth in investment, increase in profitability and dividends – all while securing a sustainable long-term business through our energy transition.

For more details regarding benefits for stakeholders, please see the Own workforce, Affected communities and Economic value chapters.

[ESRS 2-SBM-1.42c] Our value chain encompasses suppliers and contractors, forming the upstream value chain; owned assets and own workforce, forming own operations and partners and wholesale customers, forming the downstream value chain.

- Upstream value chain: For the E&P segment, supplies and contracted services largely relate to operations such as exploration, drilling of new wells and production of hydrocarbons, including maintenance and workovers and abandonment jobs. In the G&P segment, energy and trading companies account for majority of the spend. For the R&M segment, purchases include conventional feedstocks and non-fuel business products.
- Own operations: More information on our own operations can be found in this chapter, under paragraph ESRS 2-SBM-1.42, which includes a description of our business segments and products.
- Downstream value chain: All the sales volumes of oil and gas from E&P are distributed to own operations in R&M and G&P segments. External customers of G&P and R&M range from energy companies and wholesalers to industry and, indirectly, through our retail partners, to end customers.

[DR SBM-2] **Interests and views of stakeholders**

[ESRS 2-SBM-2.45a i-iv] Our commitment is to respect our entire range of stakeholders, and to engage with them

through transparent communication and open dialogue for win-win relationships.

OMV Petrom's stakeholder engagement sessions have various purposes, depending on the stakeholder and the circumstances.

Specific examples of engagements with stakeholders are provided below, grouped by stakeholder category:

Employees
Purpose: identifying and addressing concerns, identifying impacts, risks and opportunities, strengthening reputation

- Update events with Executive Board members
- Internal online company platform
- Internal newsletter
- Internal blog
- Surveys
- Constant dialogue through Trade Unions

Customers
Purpose: strengthening reputation, identifying impacts, risks and opportunities, strengthening decision-making

- Advertising/ communication campaigns
- Events
- Engagement activities within the filling stations
- Newsletters

Suppliers, contractors & business partners
Purpose: improving business relations, identifying impacts, risks and opportunities

- Negotiations and contracts
- Supplier audits and assessments
- Supplier meetings
- Reporting related to common projects
- Participation in working groups

Capital market participants
Purpose: strengthening decision-making, identifying impacts, risks and opportunities, strengthening reputation, identifying and address concerns

- Quarterly reports and presentations
- Roadshows / Investor conferences
- General Meetings of Shareholders

Competitors & peers
Purpose: identifying impacts, risks and opportunities, strengthening reputation, enhancing decision-making

- Industry meetings
- Contracts
- Participation in working groups

NGOs/ NPOs
Purpose: identifying and addressing concerns, identifying impacts, risks and opportunities, strengthening reputation

- Social projects for communities, vulnerable people
- Stakeholder dialogue and grievance mechanisms

Government/central authorities
Purpose: identifying impacts, risks and opportunities, strengthening reputation, understanding and addressing concerns

- Participation to meetings
- Relationship management
- Regular reporting (as required by legislation)

Local communities
Purpose: identifying and addressing concerns, identifying impacts, risks and opportunities, strengthening reputation

- Social investments
- Grievance mechanisms
- Meetings for business projects
- Public debates
- Participation in Town Hall events

Associations/networks
Purpose: identifying impacts, risks and opportunities, strengthening reputation, enhancing decision-making

- Regular reports and presentations
- Roadshows
- Meetings/ Debates
- Workshops/ Conferences

Media
Purpose: strengthening reputation, identifying impacts, risks and opportunities

- Press releases
- Conferences/ Events
- Interviews
- Workshops

Education, science and research organizations
Purpose: strengthening decision-making, identifying impacts, risks and opportunities, strengthening reputation

- Joint projects with industry partners, scientific organizations, schools and universities
- Conferences and lectures
- Sustainability projects
- Employer branding activities

[ESRS 2-SBM-2.45a v] We use the outcome of our stakeholder engagements to inform and adapt our decision-making processes, to adjust our plans, or to analyse and mitigate or advance our impacts, risks and opportunities.

[ESRS 2-SBM-2.45b] As part of OMV Petrom's due diligence processes, engagement with stakeholders occurs on a regular basis.

During the Double Materiality Assessment process for the 2024 Sustainability Statement, we engaged with various stakeholder groups, both internal and external, such as employees, customers, suppliers/contractors/business partners, capital market participants, NGOs, authorities, communities, associations/networks, media, and education, science and research organizations. The purpose of this engagement was to inform the impact assessment process. The input was used for validation and to potentially review the internal impact assessment.

[ESRS 2-SBM-2.45c i, ESRS 2-SBM-2.45d] In 2024, OMV Petrom revised its low carbon business targets and the Strategy 2030 plans, and as such the company updated the capital markets both on the revisions, as well as on the progress of Strategy 2030 implementation. OMV Petrom's strategy update was well received by major external stakeholders such as capital markets, media and business partners. To address investor's feedback, in 2024 we updated our dividend policy and revised up the minimum internal rates of return for low and zero carbon business projects, also reflecting the feedback received.

The Executive Board of OMV Petrom is informed about the views and interests of affected stakeholders as part of the approval process of the Double Materiality Assessment. The Executive Board members are also constantly being informed on the views and interests of our stakeholders through the results of the Pulse Check and direct engagement with employees and through direct meetings with representatives of investors, media, business partners or academia. The Executive Board is informed about the views and perspectives of stakeholders also by company experts who are directly in touch with these stakeholders. Informing Supervisory Board members takes place via the Executive Board.

[ESRS 2-SBM-2.45c ii] No further steps regarding amendments to the strategy or business model to address the interests and views of stakeholders, are to be communicated at this time.

[ESRS 2-SBM-2.45c iii] We do not foresee a change in the relationship with and views of stakeholders.

[DR SBM-2 S1] **Interests and views of Own Workforce**

[SBM-2 S1.12] OMV Petrom's commitment is to explicitly integrate human rights in its engagement with affected stakeholders – own employees, workers in the value chain and communities. Respect for human rights is a core principle in all our business activities and relations, as also reflected in OMV Petrom's Code of Conduct and Human Rights Policy Statement. These policies also affirm the values and rules the company acts by, in line with the United Nations Guiding Principles on Business and Human Rights.

OMV Petrom's own workforce is a key group of affected stakeholders. Through the Pulse Checks, regular engagements with the trade unions, as well as direct engagement with our workforce (through Executive Board webcasts, People & Culture roadshows and events, etc.), we ensure that the interests, views and rights of our people are taken into account when developing our People Strategy. Our people strategy supports the delivery of our Strategy 2030 and contributes to the adaptation of our business model.

[DR SBM-2 S2] **Interests and views of Workers in the value chain**

[SBM-2 S2.9] Value chain workers represent a key group of affected stakeholders with which OMV Petrom continuously engages, as reported in the Workers in the value chain chapter. Respect for human rights of value chain workers is a core principle that is inscribed in our Code of Conduct. We have not yet identified a need to adjust our strategy or business model as a result of the engagements conducted with this category of stakeholders as described in the Workers in the Value Chain chapter.

[DR SBM-2 S3] **Interests and views of Affected communities**

[SBM-2 S3.7] One of the key pillars of OMV Petrom's Sustainability Framework is "fostering people and

communities", through which the company recognizes the importance it places on the role of its local communities.

OMV Petrom's commitment is to explicitly integrate human rights in its work, in the community at large as well as sharing these values in the company's value chain. The standards set by the company are incorporated in the OMV Petrom Group Human Rights Policy Statement, that also affirms the values and rules the company acts by, in line with the United Nations Guiding Principles on Business and Human Rights.

We have not yet identified a need to adjust our strategy or business model as a result of the engagements conducted with this category of stakeholders as described in the Affected communities chapter.

[DR SBM-3] **Material impacts, risks and opportunities and their interaction with strategy and business model**

[ESRS 2-SBM-3.48a, ESRS 2-SBM-3.48c iii]

Sustainability Matter	Material Impact, Risk or Opportunity	Type	Value chain	Time horizon
Climate change	Emissions increased by continuing to perform high carbon and energy intensive operations in OMVP sites	Negative impact	OO	Long-term
Climate change	Emissions increased by continuing to market fossil-based products	Negative impact	DVC	Long-term
Climate change	Emissions reduced by using more renewable energy for own operations; implementation of decarbonization/ energy efficiency projects.	Positive impact	OO	Long-term
Climate change	Emissions reduced by increasing the share of low and zero carbon products sold by OMV Petrom, by decreasing the fossil fuel sale and increasing the low and zero carbon sales	Positive impact	DVC	Long-term
Climate change	Not achieving emissions reduction targets for own operations and products portfolio could result in penalties / fines / carbon taxes and reputational damage.	Risk	OO	Long-term
Climate change	Decoupled energy transition pace (market trends vs. EU targets); disruptions in the downstream value chains	Risk	DVC	Long-term
Climate change	Capitalize on higher demand for green energy and avoided carbon costs. Benefit from incentives and some regulatory framework clarity	Opportunity	OO	Long-term
Climate change	Reduce the carbon intensity of products in Company's portfolio and secure revenues as an early mover in the green energy economy; positive reputational impact.	Opportunity	DVC	Long-term
Climate change	Increased energy consumption and emissions in atmosphere by continuing to operate large facilities with significant energy consumption as an integrated oil and gas company	Negative impact	OO	Long-term

Sustainability Matter	Material Impact, Risk or Opportunity	Type	Value chain	Time horizon
Climate change	Contribute to the increase of emissions in atmosphere by continuing to provide fossil fuels on the regional markets; ensure energy security during energy transition	Negative impact	DVC	Long-term
Climate change	Contribute to the decrease of emissions by marketing more renewable energy and low-zero carbon fuels	Positive impact	DVC	Long-term
Climate change	Customers' demand for fossil fuels as energy source might decrease with loss of sales/revenue for OMV Petrom traditional business pillar	Risk	DVC	Long-term
Climate change	Transitioning to low carbon businesses, by innovating, developing, and introducing new products and services with high-energy-efficiency and low-emissions will ensure long-term value generation for OMV Petrom's business and will contribute to a sustainable transition for all customers from the energy system in Romania and SE Europe	Opportunity	DVC	Long-term
Pollution	Incidents that lead to hydrocarbon spills in soil	Negative impact	OO	Short-term
Pollution	The release of non-GHG emissions in the atmosphere directly negatively impacts air quality, while also indirectly impacting other environmental aspects (such as ecosystems) and human health	Negative impact	UVC, OO, DVC	Short-term (UVC and OO), Medium-term (DVC)
Water	Impact on water resources due to high volumes of freshwater extracted that can negatively impact the availability of water resources for other uses	Negative impact	OO	Short-term
Biodiversity and ecosystems	Negative impacts by losing habitat and alteration through land use for exploration, production, disposal of drilling wastes and associated by-products, and decommissioning of onshore and offshore oil wells	Negative impact	OO	Long-term
Own workforce	Exposure to chemicals, pollutants, constant noise, light, other stressors as well as low to severe injuries, with short to long term effect or even fatalities, due to operational profile	Negative impact	OO	Long-term
Own workforce	Provision of medical healthcare services, training, awareness programs and regular medical check-ups	Positive impact	OO	Long-term
Own workforce	Injuries (both high and low consequence) lead to a decrease of employee commitment, as well as work-days lost and decrease of productivity	Risk	OO	Long-term

Sustainability Matter	Material Impact, Risk or Opportunity	Type	Value chain	Time horizon
Own workforce	Providing opportunities for the workforce and increased employment and retention through career opportunities, long-term employment, flexible working conditions, upskilling, various benefits and well-paid employment	Positive impact	OO	Medium-term
Own workforce	Ensuring adequate wages and secure employment for our own workforce, as well as decent pay and working conditions for non-employees, not only differentiates us in the market, but also enhances attractivity as employer and customer appeal, demonstrating the company's commitment to long-term sustainability and ethical business practices that attract like-minded partners	Opportunity	OO	Long-term
Own workforce	Providing comprehensive training programs to result in a highly skilled and knowledgeable workforce	Positive impact	OO	Medium-term
Own workforce	Ensuring proper training for employees for increased efficiency and effectiveness in their roles, leading to improved operational performance, innovative ideas that can lead to more impactful products and better customer experiences	Opportunity	OO	Medium-term
Workers in the value chain	Fair payment practices provide greater job security and better working conditions for upstream value chain workers.	Positive impact	UVC	Medium-term
Workers in the value chain	Compliance with minimum human and labour rights for upstream value chain workers is ensured through OMV Petrom's policies	Positive impact	UVC	Medium-term
Workers in the value chain	Supplier engagement, pre-qualification, assessment and audits lead to improved working conditions for upstream value chain workers	Positive impact	UVC	Short-term
Workers in the value chain	Ineffective supplier engagement may lead to poor labour practices or violation of human rights	Negative impact	UVC	Medium-term
Workers in the value chain	Safety hazards associated with the activities of the upstream own operations, for contractors on OMV Petrom sites	Negative impact	UVC	Long-term
Affected communities	Creation of opportunities for communities around suppliers and own operations	Positive impact	UVC, OO	Long-term
Affected communities	Community dependence on OMV Petrom	Negative impact	OO	Short-term
Affected communities	Noise and disturbance of surrounding communities	Negative impact	UVC, OO	Short-term
Affected communities	Process safety incidents that could result in spills	Negative impact	OO	Medium-term

Sustainability Matter	Material Impact, Risk or Opportunity	Type	Value chain	Time horizon
Business conduct	Defining OMV Petrom's values and behaviours is supporting the company's purpose and strategy	Positive impact	OO	Long-term
Business conduct	A corporate culture that values safety, ethics, responsibility, and social good contributes to a positive reputation which further creates a potential competitive advantage for the company by attracting customers, attracting and retaining talent, enhancing innovation, increasing productivity, and creating long-term value	Opportunity	OO	Long-term
Business conduct	Maintaining fair relationships with suppliers and ensuring timely payments can lead to positive impacts, including improved working conditions and greater job security for their employees	Positive impact	UVC	Medium-term
Business conduct	Late payments of suppliers can lead to loss of jobs and for the small suppliers or contractors who are depending on us, this can lead to their bankruptcy	Negative impact	UVC	Medium-term
Entity specific – Process safety	Critical incidents related to the oil and gas sector include loss of control or containment of hydrocarbons, well blowout, explosions, fires, unplanned plant disruption and shutdown	Negative impact	OO	Short-term
Entity specific - Cybersecurity	Increased security of personal information and protection of right to privacy	Positive impact	OO	Long-term
Entity specific - Cybersecurity	Lack of protection against cyberthreats	Negative impact	OO	Short-term
Entity specific – Economic value	High tax contributions to the Romanian State	Positive impact	OO	Long-term
Entity specific – Economic value	Regulatory changes resulting in higher taxes impacting the company's financial position	Risk	OO	Medium-term
Entity specific – Economic value	Investments' multiplier effect (direct and indirect) in the Romanian economy	Positive impact	OO	Long-term

UVC Upstream Value Chain; OO Own Operations; DVC Downstream Value Chain

[ESRS 2-SBM-3.48c i, ii, iv] For all details regarding our impacts, risks and opportunities, please see the topical chapters.

[ESRS 2-SBM-3.48b, d] The material risks and opportunities did not have any material, measurable impact on OMV Petrom Group's current financial position, financial performance, and cash flows. There are no foreseen current financial effects of material risks and opportunities for which there is a significant risk of a material adjustment within the next annual reporting period to the carrying amounts of assets, considering the base case scenario which is used for mid-term planning as disclosed in the Consolidated Financial Statements, Note 2 - Effects of climate change and energy transition.

[ESRS 2-SBM-3.48f] The resilience of OMV Petrom's strategy and business model is crucial in addressing material impacts and risks, while seizing opportunities. OMV Petrom's strategic framework is designed to be adaptable, enabling the Company to navigate the dynamic market environment and energy transition. We have identified climate change as a strategic risk and it is annually reviewed as part of strategic risk management process. More details can be found in the Strategic Risks section in the Director's Report, part of the Report of the governing bodies chapter. In addition, our Company's resilience is sustained by investments in renewable energy and technological innovation, positioning us to capitalize on emerging opportunities in the green energy sector. More details on 2030 GHG emissions targets to mitigate impacts and advance opportunities related to energy transition, can be found in Strategy 2030 chapter and in the Climate change chapter of the Sustainability Statement section. In the longer-term, the Company's ambition to achieve net zero operations by 2050 (Scope 1 and Scope 2) emissions highlights its long-term vision and dedication to environmental stewardship.

[ESRS 2-SBM-3.48h] Refer to the topical chapters Climate change, Pollution, Water, Biodiversity and ecosystems, Own workforce, Workers in the value chain, Affected communities and Business conduct for the lists of impacts, risks and opportunities covered by ESRS Disclosure Requirements.

Other impacts, risks and opportunities which are not covered by the ESRS Disclosure Requirements, are entity specific and they are included in the following chapters: Process safety, Economic value and Cybersecurity.

Impact, risk and opportunity management

[DR IRO-1] **Description of the processes to identify and assess mateial impacts, risks and opportunities**

[ESRS 2-IRO-1.53a] The Double Materiality Assessment process was carried out taking into consideration all fully consolidated entities where OMV Petrom is the operator and/or where OMV Petrom has a stake of more than 50% and exerts controlling influence.

The Double Materiality Assessment was conducted in five steps, which considered the impacts, risks, and opportunities, as well as stakeholder expectations applying the ESRS methodology of Double Materiality Assessment (DMA).

Step 1 consisted of the development of a long list of all topics included in the ESRS and other topics from relevant guidelines. The relevance of each topic was analysed by the subject matter experts considering the nature of activities, business relationships, geographies or other factors related to OMV Petrom. The short-listed topics were further considered in the following steps.

Step 2 consisted of interviews with internal subject matter experts to identify and formulate the impacts, risks, and opportunities for the different topics.

In step 3, we conducted the stakeholder engagement, in which ten stakeholder groups (internal and external) were consulted to determine sustainability topics that are of highest relevance to them. The results were used to validate and inform the internal subject matter experts' assessment. The following groups of stakeholders were consulted: employees, customers, suppliers/contractors/business partners, capital market participants, NGOs, authorities, communities, associations/networks, media, and education, science and research organizations.

Step 4 consisted of the assessment and scoring of the impacts, risks, and opportunities identified across sustainability topics to further determine the Impact materiality and Financial materiality. The assessment was undertaken by subject matter experts, in dedicated workshops.

In step 5, the prioritization of topics was made by using a threshold previously defined and by taking into consideration the results of the previous steps.

[ESRS 2-IRO-1.53b i-iv] The assessment of impacts as part of our Double Materiality Assessment followed the 5-step process described above, in compliance with disclosure requirement ESRS 2-IRO-1.53a.

OMV Petrom leveraged its subject matter experts' experience and knowledge of the topics to make sure the focus is placed on the company's specific activities, business relationships and geographies that may give rise to heightened risk of adverse impacts.

Consultation with affected stakeholders was included to validate and inform the process performed by internal experts.

The impacts were assessed throughout the company's own operations and as a result of our business relationships, against the following set of criteria: Scale (level of seriousness of an impact), Scope (how wide-spread the impact is), Irremediability (whether and to what extent the negative impacts can be remediated, restoring environment or affected people to their prior state) and Likelihood (for

potential impacts). The evaluation took place based on the predominant positive or negative impact and various time horizons.

We applied a threshold of 8 for environmental topics, and 5 for social and governance topics.

[ESRS 2-IRO-1.53c i, ESRS 2-IRO-1.53c ii, ESRS 2-IRO-1.53c iii, ESRS 2-IRO-1.53e, ESRS 2-IRO-1.53f] The assessment of risks and opportunities as part of our Double Materiality Assessment followed the 5-step process described above.

The risks and opportunities assessed refer to the possible future events that could adversely affect or positively enhance the Group's objectives for various time horizons as defined in ESRS 2-BP-2.9a. Risks and opportunities stemming from dependencies on natural, human and social resources were considered, such as "regulations related to emissions, energy efficiency, and increasing share of renewables in the energy mix, that might result in a decrease of fossil fuels production with loss of sales/revenue".

The existing risk management principles were applied in the impacts, risks and opportunities assessment process, as part of the Double Materiality Assessment. The potential impacts and risks can be linked with the risks assessed across the organization according to EWRM process. Sustainability-related risks can appear in various forms within the organization and intersect with different risk management activities across the Company. Prioritization of such risks is supported by step 5 described in ESRS 2-IRO-1.53a. For details on EWRM process, please see Risk Management section in the Director's Report, part of the Report the Governing Bodies chapter. Opportunities are part of strategic planning, operational reviews, and investment decisions processes.

The risks and opportunities were assessed against the following set of criteria: magnitude of financial effect (how severe a financial effect is to be, on a scale of 0-none to 3-high) and likelihood of occurrence (how likely a risk or opportunity is to occur, on a scale from 0-never to 5-guaranteed).

The financial materiality threshold was defined at 1.5, thus setting high and upper range of medium financial effects as material.

[ESRS 2-IRO-1.53d] The Double Materiality Assessment process was coordinated by the Corporate Sustainability sub-department, while the internal subject matter experts were responsible for providing input and assessment in relation to their respective topic. Senior management has been involved throughout the process by their subject matter ex-perts, who provided consultation and pre-alignment.

The results were shared for feedback with the senior management and internal subject matter experts in Q4/23. The final results referring to the material topics and sub-topics that include material impacts, risks and opportunities, were presented to and approved by the Executive Board through a motion in December 2023. The results of the Double Materiality Assessment were thoroughly reviewed in 2024 by internal subject matter experts, with a more granular view on impact, risks and opportunities connected to the material topics. No material changes were identified at topic level. The results were presented to the Executive Board.

The sustainability reporting process, informed by the results of the Double Materiality Assessment, is guided by the Sustainability Directive. The Directive as well as the Process are part of the overall management process of OMV Petrom. The Sustainability Statement, as part of the OMV Petrom Annual Report, is approved by the OMV Petrom Executive Board and Supervisory Board, as well as subject to approval and presented to shareholders in the Annual General Shareholders Meeting.

[ESRS 2-IRO-1.53g] For the Double Materiality Assessment, OMV Petrom has used available information from internal reports and operational data. The information was sourced mainly from existing reporting on ESG topics and workshops with internal subject matter experts dealing with ESG management. Additionally, sector/industry standards have been reviewed to inform the double materiality process regarding sector-specific impacts (GRI, SASB etc). External and internal stakeholders were also included in the process. Each value chain segment (upstream, own operations, downstream) was included in the assessment.

[ESRS 2-IRO-1.53h] For the 2024 Sustainability Statement, OMV Petrom conducted a full Double Materiality Assessment, in accordance with ESRS requirements. The assessment was conducted in 2023 and reviewed in 2024. Compared to the prior reporting periods, this is the first time OMV Petrom has used the ESRS methodology to determine its sustainability materiality. In the previous years, OMV Petrom used the GRI guidelines to determine its sustainability materiality, as disclosed in the specific sections in its previous Sustainability Reports, which are public on the company's website.

OMV Petrom will assess for each reporting period whether material changes have occurred either internally or

externally that could result in changes to its list of material impacts, risks and opportunities, and revise the double materiality process as such. OMV Petrom has not planned the future revision date of the materiality assessment.

[DR IRO-1 E1] **Description of the processes to identify and assess material climate-related impacts, risks and opportunities**

[E1-IRO-1.20a, E1-IRO-1.AR 9] The assessment of climate-related impacts, risks and opportunities, as part of the Double Materiality Assessment, followed the 5-step process described above.

The impact assessment for the climate change topic was performed by the environmental management team. Leveraging expert judgement and historical experience within the company, OMV Petrom's own operations were screened for current and planned activities to identify actual and potential climate change and energy impacts. Related GHG emissions and their sources are described in DR E1-6 – Gross Scopes 1, 2, 3 and Total GHG emissions section. The process of identification and assessment is following the internal policy framework, as described in DR E1-2 – Policies, which is based on industry specific guidelines and applicable legislation, including but not limited to Intergovernmental Panel on Climate Change (IPCC), IEA, IOGP, IPIECA and Concawe reports.

The Strategy department, in collaboration with the environmental management team, assessed the risk and opportunities following the same approach as for impacts.

OMV Petrom's entire value chain was included in the assessment, with the objective to identify actual and potential impacts, as well as risks and opportunities.

[E1-IRO-1.20b i-ii, E1-IRO-1.AR11, E1-IRO-1.AR13, E1-IRO-1.21] OMV Petrom performed an analysis of climate-related physical risks, focusing on several aspects. This started by selecting a list of climate-related hazards specific to the geographical locations of OMV Petrom's business operations, based on Commission Delegated Regulation (EU) 2021/2139. Next, OMV Petrom's assets and activities were assessed to better understand how these may be impacted by climate change hazards. The approach to risk management was then developed with the awareness that the potential impacts of climate change risks may change over the duration of the business or asset's life.

With the support of an external consultant, OMV Petrom's assets were modeled for climate-related physical risks, focusing on perils including surface water and riverine flooding, coastal inundation, soil movement, extreme wind, wildfire, freeze-thaw, and extreme heat. The climate change model projects how selected climate-related perils could evolve over time and quantifies the physical damage that could be expected for the asset portfolio. The peril severity is mapped with the percentage of the property damage for each asset included in the analysis, to understand the potential estimated financial loss, considering the standardized archetypes used to represent OMV Petrom asset specifications. The climate-related physical risk assessment assumes no significant changes in the replacement value of the assets at risk.

The frequency and severity of the climate-related hazards were determined according to the following IPCC Representative Concentration Pathways (RCP): RCP 8.5, a high emission scenario referred to as "business as usual" and RCP 4.5, an intermediate emission scenario where global emissions peak around 2040 and decline, stabilizing greenhouse gas concentration by 2100.

For 2024, the result of the climate-related physical risk assessment indicates that the assets analyzed will be largely unaffected by any of the climate-related hazards until the middle of the century. Up to 2030, the OMV Petrom assets analyzed will not need to adapt to unavoidable impacts of climate change, which confirms that the OMV Petrom portfolio is climate-resilient until 2030.

For the supply chain, an indication of exposure to climate-related physical risks was obtained using a set of climate change risk indicators mapped to the suppliers and their geographical location, in conjunction with the type of services and products supplied.

The outcome of this analysis supports the Double Materiality Assessment.

[E1-IRO-1.20c i-ii, E1-IRO-1.AR12, E1-IRO-1.21] Please see information in Climate change chapter, section, [E1-SBM-3.19].

[E1-IRO-1.AR 15] For further information on base case and IEA "Net Zero Emissions by 2050" scenarios, please refer to Note 2 to the Consolidated financial statements for the year-end December 31, 2024.

[DR IRO-1 E2] **Description of the processes to identify and assess material pollution-related impacts, risks and opportunities**

[E2-IRO-1.11a] The assessment of impacts, risks and opportunities related to pollution as part of the Double

Materiality Assessment followed the 5-step process described above.

The assessment has been concluded based on industry specifics and considering the internal formal assessment for environmental risks, which are done under the provisions of Environmental Management Standard. During the process, OMV Petrom's site locations and business activities were assessed for identification of actual and potential impacts, risks and opportunities. This screening is grounded in past experiences with incidents, meaning particular attention was given to activities and sites where impacts have occurred before, incidents which are recorded in the company's reporting system. The impacts, risks and opportunities were assessed based on the environmental governance framework, with business division-level information considered for the top-down qualitative assessment.

The value chain was also included in the assessment.

[E2-IRO-1.11b] We used the conclusions of our consultations with affected communities, to understand their concerns, needs and priorities. These consultations are conducted through various communication channels, including public forums and/or direct discussions, to ensure transparent and inclusive communication. In addition, affected communities, through their proxies, were also involved during the Double Materiality Assessment process, as described in ESRS 2-IRO-1.53a.

[E2-IRO-1.AR 4] The Double Materiality Assessment was performed at sub-topic level, as described in ESRS 1.AR16.

[E2-IRO-1.AR 9] Our material impacts arise from business activities related to the production and processing of oil and gas. Such locations include the Petrobrazi refinery, the oil and gas production units within Exploration & Production segment, and the Brazi power plant.

[DR IRO-1 E3] **Description of the processes to identify and assess material water and marine resources-related impacts, risks and opportunities**

[E3-IRO 1.8] The assessment of impacts, risks and opportunities related to water and marine resources as part of the Double Materiality Assessment followed the 5-step process described above.

[E3-IRO 1.8a] The assessment was performed by OMV Petrom's environmental management team of experts. In the process, our site locations and business activities were assessed for actual and potential impacts, risks and opportunities.

The impacts, risks and opportunities were assessed based on a robust environmental governance framework, with business division-level information considered for the top-down qualitative assessment, including the value chain, with details described in ESRS 2-IRO-1.53a-c.

To identify activities in areas at risk of water scarcity or water stress, international tools and indexes including Verisk Maplecroft's "Water Stress Index" as well as other assessment tools were considered, with the aim to screen the state of nature including water resource:

- EUROSTAT WEI+ water exploitation index (included in national Water Management Plan at river basin).
- Water Footprint Assessment (WFA) Tool, based on Hogeboom's global model for water quantity.
- Worldwide Fund for Nature (WWF) Water Risk Filter, evaluation tool for areas at water risk.

Risk assessments conducted so far indicate a minimum to medium water risk level. The assessment process to scientifically delimit areas at water risk, is ongoing, with further details to be analysed also in other tools such as the WWF Water Risk Filter.

[E3-IRO 1.8b] We used the conclusions of our regular consultations with affected communities, to understand their concerns, needs and priorities. Our engagement process with the affected communities is described in the Affected communities chapter. In addition, affected communities through their proxies were also involved during the Double Materiality Assessment process.

[E3-IRO.1.AR 15] The Double Materiality Assessment results will be consolidated with a more specific approach in the next years.

[DR IRO-1 E4] **Description of the processes to identify and assess material biodiversity and ecosystems-related impacts, risks and opportunities**

[E4-IRO 1.17a] The assessment of impacts, risks and opportunities related to Biodiversity and ecosystems as part of the Double Materiality Assessment followed the 5-step process described above.

Our own site locations and the value chain were included in the analysis. The assessment has been concluded on industry specifics and considering the internal formal assessment for environmental risks, which are done under the provisions of Environmental Management Standards.

[E4-IRO 1.17b, E4-IRO 1.17d] The Double Materiality Assessment results will be consolidated with a more specific approach in the next years, which will follow the guidance and phases of Locate, Evaluate, Assess, Prepare (LEAP) as recommended by Taskforce on Nature-related Financial Disclosures (TNFD).

[E4-IRO 1.17c] Following the same scenario used for climate change analysis, IPCC highlighted the way climate change could alter the ecosystems, and loss of biodiversity exacerbated by pollution or land use change.

Biodiversity initiatives that OMV Petrom commits to are meant to ensure ecosystems protection or restorations that reduces the risk to biodiversity. Also, the company commits to further understand the impact of fossil fuel-based business on biodiversity. Details are included in DR E4-3, Biodiversity and ecosystems chapter.

[E4-IRO 1.17e i-ii] We used the conclusions of our consultations with affected communities, to understand their concerns, needs and priorities. Communities were involved in the Double Materiality Assessment, as described in [ESRS 2-IRO-1.53a].

[E4-IRO 1.17e iii] The company has not identified any actual or potential impact related to ecosystem services. As such, [E4-IRO 1.17e iii] is not applicable.

[E4-IRO 1.19a] We operate inside various types of National Protected Areas (NPA), Natura 2000 and Key Biodiversity Areas. For a clear determination of whether our activities related to these sites negatively affect these areas, we have started an evaluation and assessment over all activities, following a LEAP assessment guided by TNFD and considering local and national public information on the state of nature for each regional area. The assessment is in progress. For more details regarding the progress on the TNFD LEAP assessment, please see Biodiversity and ecosystems chapter.

[E4-IRO 1.19b] Impacts and mitigation measures are defined in accordance with the permits obtained for each of our sites. Additional measures implemented are included in ISO 14001 Environmental Management System (EMS). Mitigation measures are applied for significant impacts identified during the regulatory assessment procedure. Permitting and assessment procedures are applicable in all countries in which OMV Petrom Group operates.

When significant impacts are observed or predicted, the mitigation hierarchy is followed, and action planning prioritizes the avoidance and minimization of impacts rather than restoration and offsetting.

[E4-IRO-1.AR 4-6] The Double Materiality Assessment was performed at sub-topic level, as described in ESRS 1.AR16. Details are included in ESRS 2-IRO-1 section.

[DR IRO-1 E5] **Description of the processes to identify and assess material resource use and circular economy-related impacts, risks and opportunities**

[E5-IRO 1.11a, E5-IRO-1 AR 7a-f] The assessment of impacts, risks and opportunities related to Waste & Circular Economy as part of the Double Materiality Assessment followed the 5-step process described above. The top-down qualitative assessment took into consideration business division-level information related to waste management.The value chain was also included in the analysis.

Following the assessment, no impact, risk and opportunity related to Waste & Circular Economy resulted as material (E5-IRO 1 AR 7a-f are not applicable).

[E5-IRO 1.11b] We used the conclusions of our consultations with affected communities, to understand their concerns, needs and priorities. Our engagement process with the affected communities is described in the Affected communities chapter. In addition, affected communities, through their proxies, were also involved during the Double Materiality Assessment process.

[E5-IRO-1.AR 4] The Double Materiality Assessment was performed at sub-topic level, as described in ESRS 1.AR16.

[DR IRO-1 G1] **Description of the processes to identify and assess material business conduct-related impacts, risks and opportunities**

[G1-IRO 1.6] The assessment of impacts, risks and opportunities related to Business conduct, as part of the Double Materiality Assessment followed the 5-step process described above. During the process, various elements were considered, such as: types of transactions, stakeholders, locations and regulatory frameworks, associated risks.

[DR IRO-2] **Disclosure requirements in ESRS covered by the undertaking's sustainability statement**

[ESRS 2-IRO-2.56] The list of the Disclosure Requirements complied with in preparing the sustainability statement, including the page numbers where these are located (content index), as well as the table of all the datapoints that derive from other EU legislation (Appendix B of the ESRS 2

General disclosures standard), are included as Annexes after the Governance information chapter.

[ESRS 2-IRO-2.59] For the first year of reporting sustainability information according to the CSRD and ESRS, minimum disclosure requirements as per ESRS 2, as well as the reporting requirements that are mandatory starting with the first year of reporting, were included.

All disclosure requirements and data points corresponding to topics and sub-topics that resulted as immaterial during the Double Materiality Assessment, are not included in this statement.

EU Taxonomy

The EU Taxonomy Regulation, established under Regulation (EU) 2020/852, provides a classification framework for environmentally sustainable economic activities. OMV Petrom's reporting aligns with this regulation, emphasizing its role in identifying eligible and aligned activities that contribute to the EU's environmental objectives. The Complementary Climate Delegated Act (Regulation (EU) 2022/1214), which includes provisions for certain gas and nuclear energy activities, has been integrated into the assessment methodology. This update reflects OMV Petrom's commitment to adhering to the most recent regulatory advancements.

In June 2023, the European Commission adopted the Taxonomy Environmental Delegated Act, establishing technical screening criteria for economic activities contributing to the remaining four environmental objectives (Sustainable use and protection of water and marine resources, Transition to a circular economy, Pollution prevention and control, Protection and restoration of biodiversity and ecosystems). These criteria, published in the Official Journal on November 21, 2023, have been applied starting with January 2024. Additionally, the Taxonomy Climate Delegated Act was amended to include further economic activities in the manufacturing and transport sectors that contribute to climate change mitigation and adaptation. These developments have been incorporated into OMV Petrom's reporting framework for the upcoming period.

OMV Petrom's process for identifying and assessing EU Taxonomy activities

EU Taxonomy eligibility assessment
An economic activity is eligible for the EU Taxonomy if it matches the specified activity description provided in the EU Taxonomy Delegated Acts. OMV Petrom undertook a comprehensive screening of its portfolio of activities for comparison against the descriptions of the economic activities outlined in Annex I or II of the EU Taxonomy Climate Delegated Act and in Annexes I-IV of the EU Taxonomy Delegated Acts. This assessment used both bottom-up and top-down approach, involving interdisciplinary teams (both corporate and business segments) for effective identification of eligible activities, assets, projects, and their corresponding capital and operational expenditure and turnover.

All OMV Petrom's identified EU Taxonomy-eligible economic activities are directly related to the environmental objective of climate change mitigation. Analysis of all our economic activities is done on an annual basis and includes an update of the previous year assessment.

EU Taxonomy alignment assessment
OMV Petrom's alignment assessment includes the following criteria:

- Substantial contribution to climate change mitigation. Evaluations include the application of technical screening criteria for eligible activities to ensure they contribute meaningfully to climate objectives. Evidence is collected by project managers, supported by the Sustainability sub-department, for each eligible activity. Few examples of such activities are electricity generation using solar photovoltaic technology and infrastructure enabling low-carbon road transport public transport.
- "Do No Significant Harm" (DNSH) criteria: Compliance is assessed for each DNSH objective, covering water and marine resources, circular economy, pollution prevention and control, biodiversity, and ecosystems. Physical and climate risk assessments for DNSH are conducted centrally, by sustainability experts, using the Enterprise-Wide Risk Management approach, with external validation where necessary.
- Minimum social safeguards: Compliance with international standards, including human rights, labor law, anti-corruption policies, and tax governance, is ensured through an evaluation of OMV Petrom's key policies, such as the Human Rights Policy, Code of Conduct, and Tax Strategy. Processes such as grievance mechanisms and community consultations are reviewed to ensure conformity with global standards.

To ensure comprehensive assessments aligned with EU Taxonomy standards, the evaluation process involves corporate functions, business segments representatives (such as sustainability experts, project managers) and external consultants.

Definition of financial KPIs

OMV Petrom's Key Performance Indicators (KPIs) are calculated based on OMV Petrom Group's consolidated IFRS financial statements. KPIs are computed based on the consolidated sales revenues (equivalent with the turnover indicator from taxonomy), CAPEX, and OPEX of OMV

Petrom SA and its fully consolidated subsidiaries. Subsidiaries that are not fully consolidated, associated companies and joint ventures were excluded from the assessment. These KPIs (turnover, CAPEX, OPEX) reflect the eligibility and alignment of economic activities under the EU Taxonomy framework and are derived from consolidated IFRS financial statements. The following principles and methodologies based on the Delegated Act 2021/2178 for Reporting („Disclosure Delegated Act") apply:

The proportion of taxonomy-aligned economic activities in the sales revenues, CAPEX, and OPEX (the "alignment ratio") has been calculated as the part of sales revenues, CAPEX, and OPEX derived from products and services associated with taxonomy-aligned economic activities (numerator) divided by the total sales revenues, CAPEX, and OPEX (denominator). The same logic applies to the calculation of the "eligibility ratio".

Turnover Denominator: Based on OMV Petrom's consolidated sales revenues, as reported in the OMV Petrom Consolidated Financial Statements (2024, Note 19). For further details on our accounting policies regarding consolidated sales revenues, see OMV Petrom Consolidated Financial Statements 2024, Note 5.3.q).

CAPEX Denominator: Includes additions to intangible assets, tangible assets (excluding decommissioning costs), and right-of-use assets. It includes also the additions due to business combinations (except for goodwill which is excluded from the CAPEX KPI). Relevant details are included in Notes 7 and 8 of the Consolidated Financial Statements (2024). Additional details on accounting policies are described in Notes 5.3.d), e), f), and g).

OPEX Denominator: Consists of research and development (R&D) expenses, maintenance and repair costs, other direct expenditures for day-to-day servicing of assets, and short-term leases.

R&D expenses under "Other operating expenses" in the income statement include the research and development expenses. These expenses are detailed in the Consolidated Financial Statements (2024, Notes 22 and 5.3.h).

Maintenance and repair costs and other direct expenditure related to day-to-day servicing of assets are found under "Production and operating expenses" and "Selling, distribution, and administrative expenses" lines in the income statement.

Expenses for short-term leases are determined and accounted for in accordance with IFRS 16 "Leases".

Direct costs for training and human resources improvements are excluded due to immateriality.

In cases where joint production occurs (e.g., fuels and organic basic chemicals), allocations are made using specific keys that reflect plant yield, size, and operational complexity (Activity 3.14).

EU Taxonomy – Overview KPIs 2024

	Turnover		Capital expenditure		Operating Expenses	
	RON mn	%	RON mn	%	RON mn	%
Environmentally sustainable (taxonomy-aligned) activities	8.90	0.02	997.74	14.49	1.25	0.12
Taxonomy-eligible, but not taxonomy-aligned activities	3,084.53	8.63	1,000.87	14.54	156.32	15.35
Taxonomy-non-eligible activities	32,671.26	91.35	4,886.53	70.97	861.22	84.53
Total	**35,764.69**	**100.00**	**6,885.14**	**100.00**	**1,018.79**	**100.00**

EU Taxonomy – Overview KPIs 2023

	Turnover		Capital expenditure		Operating Expenses	
	RON mn	%	RON mn	%	RON mn	%
Environmentally sustainable (taxonomy-aligned) activities	-	-	74.81	1.57	-	-
Taxonomy-eligible, but not taxonomy-aligned activities	2,914.07	7.51	946.75	19.92	173.25	16.21
Taxonomy-non-eligible activities	35,893.84	92.49	3,732.12	78.51	895.39	83.79
Total	**38,807.91**	**100.00**	**4,753.69**	**100.00**	**1,068.64**	**100.00**

Taxonomy-eligible and aligned turnover:
In 2024, 8.63% of OMV Petrom's turnover could be classified as taxonomy eligible (2023: 7.51%) and 0.02% as taxonomy aligned turnover (N/A in 2023).

Taxonomy-eligible turnover 2024: Taxonomy-eligible turnover reflects revenues derived from activities that meet the EU Taxonomy's eligibility criteria. These activities include mainly the electricity generation from fossil gaseous fuels in OMV Petrom own facilities (Activity 4.29), manufacture of organic basic chemicals (Activity 3.14) and high-efficiency co-generation of heat/cool and power from fossil gaseous fuels (Activity 4.30).

Taxonomy-aligned turnover 2024: Aligned turnover includes revenues generated from eligible activities that comply with the technical screening criteria, DNSH criteria, and minimum social safeguards. The methodology follows the Group's guidance, ensuring no double counting and proper allocation keys for joint production activities. In 2024 aligned turnover derives from infrastructure enabling low-carbon transport (Activity 6.15).

EU Taxonomy – Taxonomy-eligible and taxonomy-aligned turnover (in RON mn)

	2024		2023	
	Aligned turnover	Eligible (non-aligned) turnover	Aligned turnover	Eligible (non-aligned) turnover
Revenue from contracts with customers (IFRS 15)	8.90	2,816.75	-	2,564.47
Revenue from transactions within the scope of IFRS 9	-	267.78	-	349.60
Total	**8.90**	**3,084.53**	**-**	**2,914.07**

Taxonomy-eligible and aligned CAPEX:
In 2024, 14.54% of OMV Petrom's CAPEX qualified as taxonomy-eligible (2023: 19.92%), and 14.49% was deemed taxonomy-aligned (2023: 1.57%).

Taxonomy-eligible CAPEX 2024: Eligible CAPEX includes investments in tangible and intangible assets related to eligible activities, such as manufacture of organic basic chemicals (Activity 3.14), sea and coastal freight water transport, vessels for port operations and auxiliary activities (Activity 6.10) and electricity generation from fossil gaseous fuels (Activity 4.29) .These investments are directly linked to the EU Taxonomy activities identified during the eligibility assessment.

Taxonomy-aligned CAPEX 2024: Aligned CAPEX reflects investments in eligible activities that meet alignment criteria, including DNSH and social safeguards. The calculation excludes decommissioning costs.

In line with our strategy and our plan to diversify our portfolio with greener investments, we have enhanced our focus on the production of biofuels, on renewable energy projects and on upgrading and modernizing the existing infrastructure to improve efficiency and reduce emissions. Therefore, the significant increase in taxonomy-aligned CAPEX compared to previous years, highlights the company's commitment to sustainable investments and adherence to the EU Taxonomy for sustainable activities.

The activities contributing most to aligned CAPEX for climate change mitigation were the activities related to electricity generation using solar photovoltaic technology (Activity 4.1), infrastructure enabling low-carbon road transport (Activity

6.15) and public transport and manufacture of hydrogen (Activity 3.1).

EU Taxonomy – Taxonomy-eligible and taxonomy-aligned CAPEX (in mn RON)

	2024		2023	
	Aligned Capital expenditure	Eligible (non-aligned) Capital expenditure	Aligned Capital expenditure	Eligible (non-aligned) Capital expenditure
Additions to property, plant, and equipment	997.74	1,000.41	74.81	946.56
Additions to capitalized development costs	-	-	-	-
Additions to other intangible assets	-	0.46	-	0.19
Total	**997.74**	**1,000.87**	**74.81**	**946.75**

Taxonomy-eligible and aligned OPEX: In 2024, 15.35% of OMV Petrom's operating expenses (OPEX) qualified as eligible (2023: 16.21%) and 0.12% qualified as aligned (N/A in 2023).

Taxonomy-eligible OPEX 2024: Eligible OPEX includes expenditures related to the maintenance and operation of assets directly supporting eligible activities, such as repairs for assets involved in electricity generation, research and development and manufacture of organic basic chemicals.

Taxonomy-aligned OPEX 2024: Aligned OPEX includes operational expenses linked to activities meeting alignment requirements as infrastructure enabling low-carbon road transport and public transport (Activity 6.15). The allocation ensures proper attribution to aligned activities without overlap.

EU Taxonomy – Taxonomy-eligible and taxonomy-aligned OPEX (in RON mn)

	2024		2023	
	Aligned Operating Expenses	Eligible (non-aligned) Operating Expenses	Aligned Operating Expenses	Eligible (non-aligned) Operating Expenses
Research and development expenses	-	21.93	-	40.20
Expenses for maintenance and repairs	1.25	134.39	-	133.05
Short-term lease expenses	-	-	-	-
Total	**1.25**	**156.32**	**-**	**173.25**

For more taxonomy related tables, please see the Annexes section, after the Governance information chapter.

Climate change

At OMV Petrom, the commitment to transitioning to a lower carbon future is aligned with our Strategy 2030, as well as our dedication to achieve long-term growth by capitalizing on higher demand for green energy and on investment opportunities across the value chain while reducing the transition risks.

Our 2030 GHG emissions reduction targets were developed with focus on reducing our impact and the carbon footprint of our operations and portfolio.

Our strategic projects, including Neptun Deep and low and zero carbon business portfolio, support our company's and Romania's decarbonization agenda, as well as our ambition to reach net zero operations by 2050 (Scopes 1 and 2). Furthermore, we have set GHG emissions reduction targets by 2030, enabled by the decarbonization of our current operations through modernization and optimization. Deployment of Carbon Capture and Storage (CCS) is fundamental to achieving the net emissions reduction target.

Sub-topic	#	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain[1]	Policies
Climate change mitigation	1	Emissions increased by continuing to perform high carbon and energy intensive operations in OMVP sites	Act	Negative impact	OO	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework ▶ Environmental Management Standard
Climate change mitigation	2	Emissions increased by continuing to market fossil-based products	Act	Negative impact	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework ▶ Environmental Management Standard
Climate change mitigation	3	Emissions reduced by using more renewable energy for own operations; implementation of decarbonization/ energy efficiency projects	Act	Positive impact	OO	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework
Climate change mitigation	4	Emissions reduced by increasing the share of low & zero carbon products sold by OMVP, by decreasing the fossil fuel sale and increasing the low & zero carbon sales	Pot	Positive impact	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework

Sub-topic	#	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain[1]	Policies
Climate change mitigation	5	Not achieving emissions reduction targets for own operations & products portfolio could result in penalties / fines / carbon taxes and reputational damage	N/A	Risk	OO	▶ Code of Conduct ▶ HSSE Policy ▶ HSSE Risk Management Standard ▶ Human Rights Policy Statement ▶ GHG Management Framework ▶ Enterprise-Wide Risk Management (EWRM)
Climate change mitigation	6	Decoupled energy transition pace (market trends vs. EU targets); Disruptions in the downstream value chains	N/A	Risk	DVC	▶ HSSE Policy ▶ HSSE Risk Management Standard ▶ Human Rights Policy Statement ▶ GHG Management Framework ▶ Enterprise-Wide Risk Management (EWRM)
Climate change mitigation	7	Capitalize on higher demand for green energy and avoided carbon costs. Benefit from incentives and some regulatory framework clarity	N/A	Opportunity	OO	▶ Code of Conduct ▶ HSSE Policy ▶ GHG Management Framework ▶ Environmental Management Standard
Climate change mitigation	8	Reduce the carbon intensity of products in Company's portfolio and secure revenues as an early mover in the green energy economy; positive reputational impact	N/A	Opportunity	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ GHG Management Framework ▶ Environmental Management Standard
Energy	9	Increased energy consumption and emissions in atmosphere by continuing to operate large facilities with significant energy consumption as an integrated O&G company	Act	Negative impact	OO	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework ▶ Environmental Management Standard
Energy	10	Contribute to the increase of emissions in atmosphere by continuing to provide fossil fuels on the regional markets;	Act	Negative impact	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework

Sub-topic	#	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain[1]	Policies
		ensure energy security during energy transition				▶ Environmental Management Standard
Energy	11	Contribute to the decrease of emissions by marketing more renewable energy and low-zero carbon fuels	Act	Positive impact	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ Human Rights Policy Statement ▶ GHG Management Framework ▶ Environmental Management Standard
Energy	12	Customers' demand for fossil fuels as energy source might decrease with loss of sales/revenue for OMV Petrom traditional business pillar	N/A	Risk	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ HSSE Risk Management Standard ▶ GHG Management Framework ▶ Enterprise-Wide Risk Management (EWRM)
Energy	13	Transitioning to a low carbon business, by innovating, developing, and introducing new products and services with high-energy-efficiency and low-emissions will ensure long-term value generation for OMV Petrom's business and will contribute to a sustainable transition for all customers from the energy system in Romania and SE Europe	N/A	Opportunity	DVC	▶ Code of Conduct ▶ HSSE Policy ▶ HSSE Risk Management Standard ▶ GHG Management Framework ▶ Enterprise-Wide Risk Management (EWRM)

Strategy

[DR E1-1] **Transition plan for climate change mitigation**

[E1-1-AR.1] As the largest integrated energy producer in the SEE region, we recognize climate change as one of the most important global challenges today and we support the goals set forth by the Paris Climate Change Agreement; we therefore developed a transition plan for climate change mitigation for 2030 ("Transition Plan") to align our strategy and business model with the transition to a sustainable economy, as follows:

- For our strategic horizon 2030, all our three strategic pillars support the energy transition, while generating value for our business and respond to our customers' needs:
  - Transition to low and zero carbon, by developing new low-emission products
  - Grow Regional Gas, best represented by our deep-offshore gas flagship project, Neptun Deep;
  - Traditional business, for which we are improving the operational efficiency;

This Transition Plan is aligned with our Strategy 2030 which is enabled by a sound capital allocation policy. Our new low and zero carbon business activities are expected to account for around 35% (EUR ~3.7 bn) of the cumulated gross CAPEX earmarked for the period 2022-2030. OMV Petrom remains committed to reducing GHG emissions by 2030 (details in this chapter, DR E1-4 Targets). Based on the benchmarking of our 2030 GHG absolute emissions reduction targets against the IEA climate scenarios trajectories, our emission reductions are in line with limiting the global warming to 2 degrees (details in E1-1.16a). We are already progressing in implementing this Transition plan (details in this chapter, DR E1-1.16j and in the Strategy 2030 section under the Company chapter).

- In the longer term, our company's ambition is to achieve Net Zero operations (Scopes 1 and 2) by 2050 through improvement of operational efficiency (including by constant monitoring of new technologies), increase in zero-carbon energy usage, as well as sustainable feedstock and carbon reduction measures.

In 2024, our updated Strategy 2030 reinforced our commitment to transform for a lower carbon future, with acceleration and increase of renewable energy and e-mobility targets as well as setting green hydrogen targets. For biofuels, we adjusted downwards our 2030 initial capacity target due to technology maturity level and market developments. For more details, see Strategy 2030 section under the Company chapter.

Our commitment to sustainability and our Strategy 2030 are supported in our business model as an integrated energy player (DR 42, General disclosures chapter). We operate across the entire energy value chain, from exploration and production of oil and gas, to refining and marketing of refined petroleum products, as well as to power generation and marketing of gas and power. Our 2030 strategic pillars also enhance vertical integration across the energy value chain, reducing both our own and our clients' carbon footprint. For instance, the renewable energy we generate will not only be sold to our clients, but also used in our own operations. Additionally, it will power our EV charging network and be converted into green hydrogen in our electrolyzers for use by our refinery.

Exposure to coal and oil and gas-related activities

Natural gas is expected to play a pivotal role as a transition fuel in the power mix[xxv] of Romania's, with more than 50% lower CO_2 emissions than coal in power generation. A game-changer for OMV Petrom and Romania, Neptun Deep is foreseen to come on stream in 2027, increasing Romania's and the region's long-term security of energy supply, while contributing to a lower carbon economy through its low carbon intensity footprint. In addition, the flexibility of gas-fired power plants, such as Brazi, support the integration of additional renewable capacities into the power system.

In terms of our traditional oil and gas portfolio, by 2030, the production is expected to decline (<5% production decline / year[xxvi]). However, looking at OMV Petrom's overall hydrocarbon production, after Neptun Deep comes on stream, the share of gas – the cleanest fossil fuel – is expected to increase to 70% (vs. 52% in 2024). With its low carbon intensity operations, below industry average, the Neptun Deep project will contribute to reducing Scope 1&2 carbon intensity[xxvii] in the E&P business division. Beyond 2030, we anticipate an overall reduction in oil and gas production. Throughout this period, we plan to meet our customers' evolving energy needs while advancing our sustainability goals.

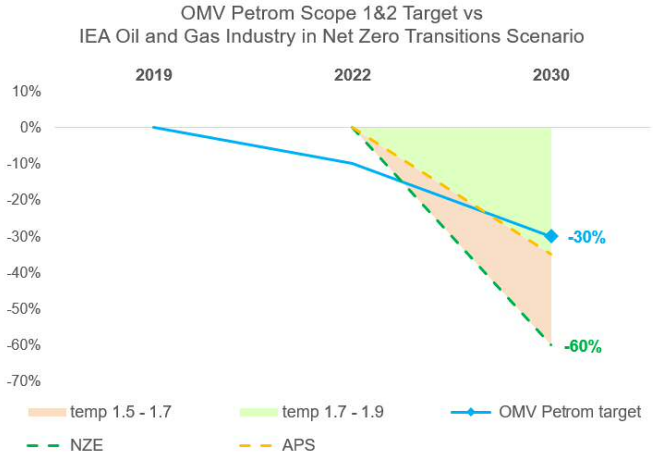

[E1-1.14,16a, AR 2, AR 26, AR 27, E1-4.33] GHG emission reduction targets

OMV Petrom is committed to reducing its absolute GHG emissions by 2030: 30% reduction of Scope 1 and 2 emissions and 20% reduction of Scope 1-3 emissions (only category 11 from Scope 3), compared to the baseline year of 2019. (see details regarding our targets in DR E1-4 GHG Emissions reduction targets).

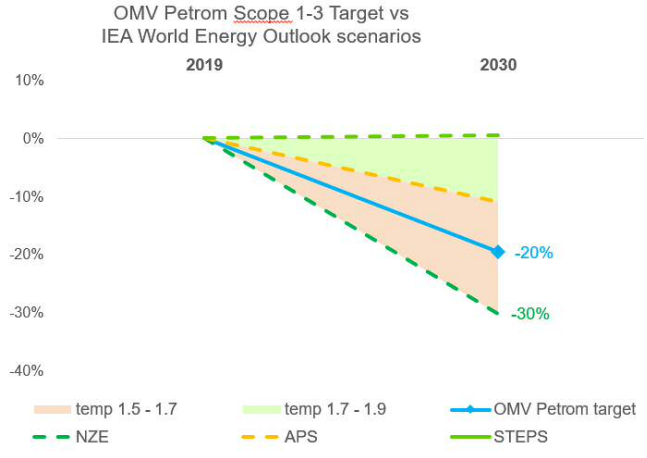

In assessing our 2030 total GHG reduction targets' compatibility with the Paris Agreement objective[xxviii], we compared them to the approximate trajectories implied by International Energy Agency (IEA) scenarios.

[xxv] ANRE Annual Report 2022, page 92;
[xxvi] 2024-2030 average annual decline in traditional hydrocarbon production, before divestments (estimated at 10-15 kboed/d in 2030) and excluding Neptun Deep volumes (70 kboe/d in 2030); source: OMV Petrom website, Capital Markets Day 2024.
[xxvii] Carbon Intensity of operations (Scopes 1 and 2) is calculated as GHG emissions divided by production and expressed in t CO2e / toe
[xxviii] Paris Agreement goal: limiting global temperature rise this century well below 2 degrees Celsius above pre-industrial levels and to pursue efforts to limit the temperature increase even further to 1.5 degrees Celsius.

In the sectoral report on The Oil and Gas Industry in Net Zero Transitions (2023), IEA states that globally, Scopes 1 and 2 emissions from oil and gas operations should fall by more than 60% in the NZE scenario by 2030 and by 35% in the APS (Announced Pledges Scenario) scenario versus 2022. IEA acknowledges however that achieving these targets could be challenging for companies which have already undertaken major emissions reduction efforts in the past. OMV Petrom is committed to a reduction of Scope 1&2 emissions of 30% by 2030 (vs. 2019) which places our target closer to the APS reduction trajectory (and above NZE reduction trajectory).

IEA World Energy Outlook (2024) describes three scenarios regarding global emissions and the associated temperature increase in each scenario until 2050: STEPS, APS and NZE.[xxix] OMV Petrom's GHG Scope 1-3 target reduction of -20% in 2030 vs. 2019 is positioned between the NZE reduction trajectory (associated with 1.5°C temperature increase) and APS (1.7°C temperature increase). In our analysis, the percentage decrease of the global GHG emissions between 2019 and 2030 in each of the IEA scenarios[xxx] was used as proxy for the percentage decrease needed in any company's Scope 1-3 GHG emissions (so that the company's emissions trajectory can be compared to the corresponding temperature trajectory).

According to the benchmarking analysis performed with the two IEA reports mentioned above, our 2030 GHG reduction targets are compatible with the Paris Agreement's goal of limiting global warming to below 2°C, however our targets are situated above a trajectory compatible with limiting the global temperature increase to 1.5°C. In the long term, OMV Petrom is committed to achieving Net Zero operations (Scopes 1 and 2) in 2050, in line with the IEA NZE by 2050 sectoral scenario.

Currently, there are no sectoral oil and gas pathways defined through public policies and no sectoral science-based target-setting methodologies which would facilitate a more precise evaluation of the alignment of GHG reduction targets with the Paris Agreement goal. Provided new guidance and methodologies become available, OMV Petrom will revisit the 1.5°C compatibility assessment and adjust related conclusions as needed.

[E1-1.16b, cross-reference to E1-4.34f, AR 30a-c]
Decarbonization levers

To achieve our 2030 strategic GHG total emission reduction targets, OMV Petrom has identified climate change mitigation actions across its entire value chain (details in DR E1-3 Actions), aggregated in the decarbonization levers described below. These decarbonization levers group the investments identified as part of OMV Petrom's mid-term planning toward the OMV Petrom Strategy 2030 and its climate targets.

- Lower fossil fuels sales: main decarbonization lever for the reduction of absolute Scope 3 emissions, by lowering

[xxix] Stated Policies Scenario (STEPS), corresponding to a temperature increase of more than 1.9°C by 2050; Announced Pledges Scenario (APS) corresponding to a temperature increase of around 1.7°C in 2050; Net Zero Emissions by 2050 Scenario (NZE) corresponding to a temperature increase of around 1.5°C, with peak temperature rise being less than 1.6 °C around 2040 before falling back to below 1.5 °C by 2100.
[xxx] We used 2019 as baseline year for computing 2030 reduction percentage: -30% in the NZE scenario, -11% in APS and +1% in STEPS.

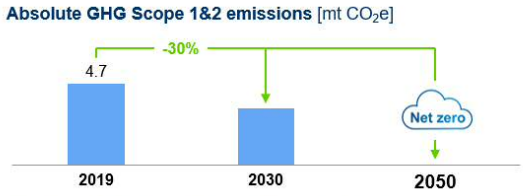

fossil fuels sold to customers in Romania and in the region; it also contributes to the improvement of carbon intensity of energy supply Scope 1, 2, 3.

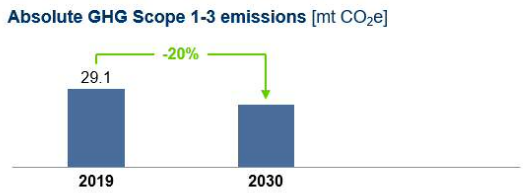

- Improve operational efficiency: this decarbonization lever includes initiatives aiming at optimizing and decarbonizing our operational processes by increasing energy efficiency, electrifying operations (green electricity generation from small on-site photovoltaic systems, generation of heat/cool from waste), reducing flaring and venting, and reducing methane emissions through leak detection and improvements to asset integrity. All these key actions contribute to reducing the absolute Scope 1&2 emissions (including to reduce methane emissions) and to improve the carbon intensity of energy supply Scope 1, 2, 3 indicator.

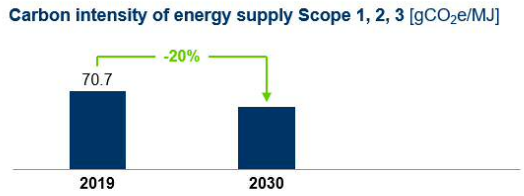

- Increase in zero carbon energy sales: with impact on the achievement of our carbon intensity of energy supply (Scope 1, 2, 3) target. This will be achieved by increasing sales of sustainable fuels and renewable power. Additionally, we are assessing the potential for other new low and zero carbon energy technologies (including hydrogen, geothermal energy, and biogas).

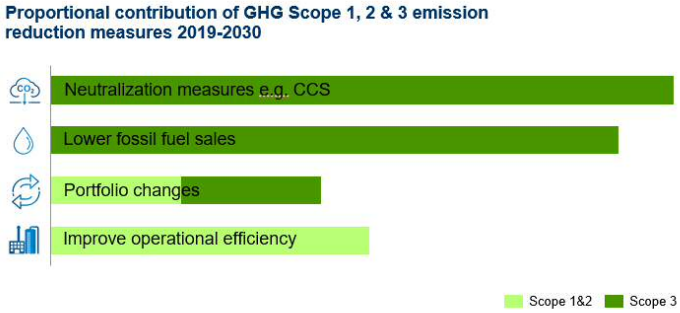

- Portfolio changes: implementing strategic portfolio changes through acquisitions and investments, decommissioning, divesting assets, and optimizing our oil and gas portfolio focusing on gas as a transition fuel will help us reduce emissions and achieve our climate targets.

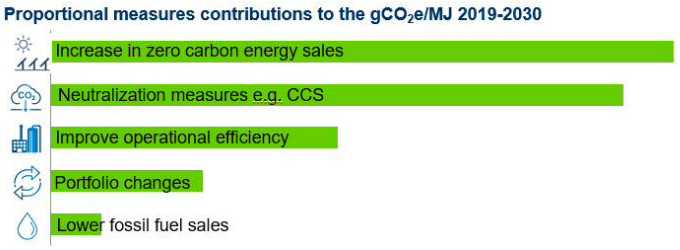

- Neutralization measures e.g. CCS: GHG emission reduction measures such as using Carbon Capture and Storage (CCS) technologies will play a key role in decarbonization. We target to store around 2 million tons of CO2 in 2030.

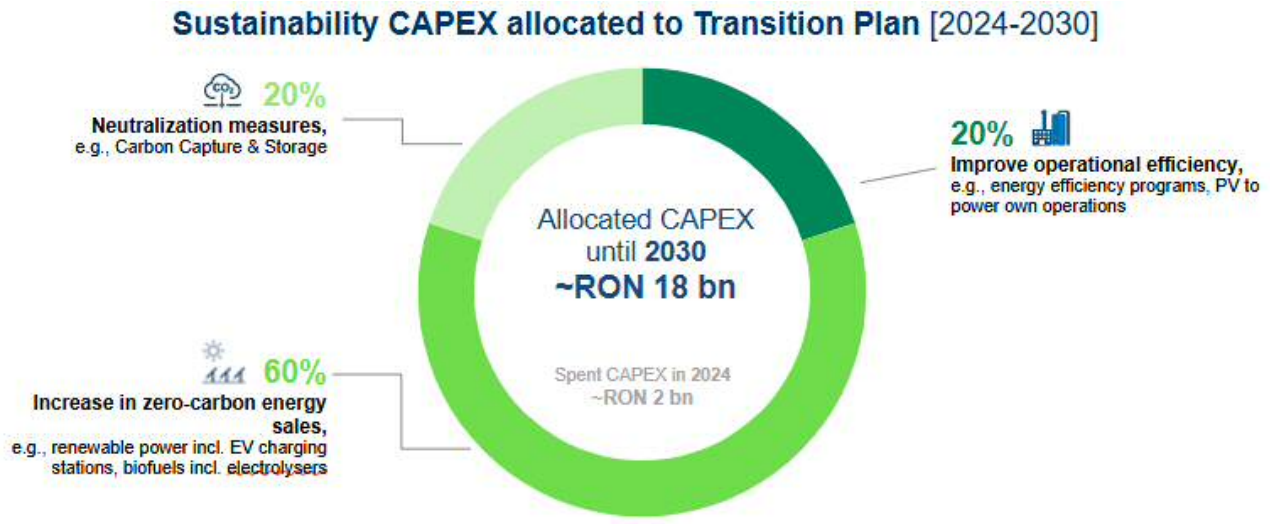

[E1-1.16c, E1-3.29c (reference to EU Taxonomy KPI), E1-3.AR 21-AR 22] Investments and funding supporting the implementation of the Transition Plan. To support OMV Petrom's climate targets, the company allocated approximately RON 18 bn gross for the period 2024-2030 (more details in this chapter, DR E1-3 Actions).

[E1-1.16d] Locked-in emissions refer to future GHG emissions that are likely to be caused by OMV Petrom's active and firmly planned key assets as well as the GHG emissions coming from the products sold. OMV Petrom's key assets regarding their locked-in emissions include the following assets:

- Petrobrazi refinery
- Brazi power plant
- Exploration & Production assets

Petrobrazi refinery has an annual refining capacity of 4.5 mn tons/year of crude oil. The GHG emissions generated by Petrobrazi consist mainly of emissions from processing of crude oil into a wide range of petroleum products (gasoline, diesel, LPG, aviation fuel and other petroleum products).

Brazi power plant is a combined cycle power plant with a total capacity of 860 MW, allowing to cover approximately 10% of Romania's electricity generation mix. Its locked-in emissions are directly related to the gas consumption for electricity generation over its lifetime.

In E&P, we operate 149 commercial oil and natural gas fields in Romania, among which the Domino and Pelican South offshore gas fields from the Neptun Deep block. The emissions associated with E&P assets are from thermal and electrical production, flaring, venting, fugitive emissions and other specific processes.

The locked-in emissions associated with the products OMV Petrom sells are represented by Scope 3, Category 11, in line with the targets set for 2030. These emissions are directly related to the combustion of the sold oil and gas products for energy use.

The locked-in emissions stemming from our key assets and products do not jeopardize the achievement of our emission targets, as their emissions profile over the coming years is accounted for in our Strategy 2030 (see details on decarbonization levers and key actions that support the achievement of our GHG targets 2030 in section E1-1.16b)

[E1-1.16e, E1-3.29c.iii] More than half of planned Sustainability CAPEX will go to zero carbon products. Planned projects considered within the Increase in zero-carbon energy sales lever mostly comprise of activities that have been aligned in 2023 and 2024.

[E1-1.16f] Significant CAPEX invested in 2024 related to oil- and gas related economic activities amounted to RON 4.9 bn, of which RON 0.1 bn represent Sustainability CAPEX.

[E1-1.16g] As an oil and gas company, OMV Petrom is excluded from EU Paris-aligned benchmarks.

[E1-1.16h] Our Transition Plan for climate change mitigation is aligned with our Strategy 2030. It sets our ambition to be at the forefront of the energy transition ("Transition Plan") in Romania and the SEE region: lowering our carbon footprint while serving the society's increasing energy demand and need for energy security.

Our decarbonization plan is reflected in total GHG reduction targets for 2030 (-30% Scope 1 and 2 emissions, -20% Scope 1-3 emissions, -20% Carbon Intensity of Energy

Supply, compared to baseline year 2019) (for details regarding the methodologies used to define our targets, refer to DR E1-4 under this chapter). Additionally, we aim to achieve Net Zero operations (Scopes 1 and 2) by 2050.

Our ambition to decrease our carbon footprint is supported by our financial frame. By 2030, the company's portfolio is being expanded to include new low and zero carbon business activities, which together will account for around 35% of cumulated gross CAPEX (EUR 3.7 bn) for the 2022 – 2030 period. Most of this CAPEX will have been spent in the period 2025 – 2030.

[E1-1.16i] Set forth in 2021, our Strategy 2030, which included our Transition Plan, was updated by the Executive Board and reapproved by our Executive Board and Supervisory Board in 2024.

In addition, all Transition Plan related disclosures (included in this report) are approved by the OMV Petrom Executive Board and Supervisory Board within the overall approval process for the 2024 Annual Report.

[E1-1.16j] The progress made in implementing our Transition Plan can be best recognized by looking at the implementation progress of our Strategy 2030 (details in chapter Strategy 2030), especially for the Transition to low and zero carbon business. Our ambitions in the low and zero carbon business are backed by investments (35%) over the course of the decade (EUR 3.7 bn gross between 2022 2030), out of which EUR 0.4 bn were already spent in the period 2022 – 2024.

Our 2030 GHG reduction targets and Net Zero operations in 2050 ambition remain unchanged, reinforcing our commitment to mitigate climate change (more details in Disclosure Requirement E1-4). In 2024, OMV Petrom continued to improve its energy and operational efficiency, reducing absolute Scope 1 and 2 emissions by 17% compared to 2019. During the same period, the E&P methane intensity decreased by approximately 80% along with significant reductions in flaring and venting. Scope 1-3 emissions were reduced by 11% compared to 2019, driven by lower gas sales and increased operational efficiency.

[ESRS 2 SBM-3] **Interaction with strategy and business model**

[E1-SBM-3.18] OMV Petrom's overall risk management process also covers climate change-related risks. These are analysed and addressed in a systematic way, according to adopted sustainability-related policies and targets. Climate change risk identification and assessment at OMV Petrom consider various sources of uncertainty associated with physical and transition risks for our own operations and along the value chain.

As an integrated oil and gas company, OMV Petrom's business and its key assets are more exposed to transition risks in 2030 and beyond, rather than physical risks. Following the double materiality assessment, OMV Petrom has identified the following material climate-related transition risks:

- Not achieving emissions reduction targets for own operations and products portfolio could result in penalties / fines / carbon taxes and reputational damage;
- Decoupled energy transition pace (market trends vs. EU targets);
- Disruptions in the downstream value chains.

[E1-SBM-3.19a-b, E1-SBM-3.19 AR 6; E1-SBM-3.19.AR7a] OMV Petrom's resilience framework for managing potential climate change crises or unpredictable threats adheres to the principles of assessment, testing, monitoring, and continuous improvement. This framework includes a stress test based on a "net zero emissions by 2050" scenario to identify the challenges OMV Petrom may face before 2030 related to the energy transition, including the risk of stranded assets, and to develop the necessary capabilities to address these challenges. The assumptions for this scenario are consistent with the IEA Net Zero Emissions (NZE) scenario, where available. Details about the macroeconomic trends and energy consumption and mix are disclosed in the Business Environment chapter of the Annual Report 2024.

[E1-SBM-3.19b-c, E1-SBM-3.19.AR7b-c, E1-SBM-3.19.AR8a] The resilience analysis was performed in line with the consolidated financial statements prepared in accordance with IFRS as of December 31st, 2024. Further details can be found in the Note 2 to the consolidated financial statements for the year end December 31, 2024, in the Annual Report 2024.

The critical assumptions for a low carbon and resilient economy were set for OMV Petrom using sensitivities calculated based on the IEA Net Zero Emissions (NZE) price assumptions. Further details about time horizons and financial effects, as well as the mitigation measures and resources needed, can be found in the Note 2 to the consolidated financial statements for the year end December 31, 2024, in the Annual Report 2024.

Details about the uncertainties of the resilience analysis and to what extent the assets and business activities at risk are

considered within the definition of the OMV Petrom's 2030 strategy, investment decisions, and current and planned mitigation actions can be found in the Note 2 to the consolidated financial statements for the year end December 31, 2024, in the Annual Report 2024.

[E1-SBM-3.19.AR8b] OMV Petrom has committed to addressing climate change and reducing the carbon footprint of its operations and portfolio by 2030, with details provided in E1-4 section of SS 2024, supporting its ambition to achieve net-zero operations by 2050 (Scopes 1 and 2). While energy transition poses risks to oil and gas companies, it also triggers increases in demand for green energy which lead to investment opportunities across the value chain. OMV Petrom is well positioned to take advantage of these opportunities, while managing transition risks.

OMV Petrom continues to be in close dialogue with financial institutions and the investor community regarding its transformation toward net zero operations by 2050 and the necessary steps to follow the decarbonization pathway. OMV Petrom reports on its ESG performance and provides insights on its active approach to shaping its business strategy to ensure alignment with sustainability climate goals. This also supports access to attractive debt and equity financing.

While aligning with ESRS requirements and enhancing sustainability practices, OMV Petrom is targeting a broad diversification of its investor base. OMV Petrom fosters investor confidence and assesses ESG-aligned funding options to ensure access to funding and liquidity at attractive rates, if needed, in line with market developments.

Impact, Risk and opportunity management

[DR E1-2] **Policies**

[E1-2.24,.25. E1-MDR-P] Key objectives addressing climate change mitigation and energy IROs include continuously improving carbon efficiency, supporting and accelerating the energy transition and achieving net-zero operations by 2050. We actively engage with stakeholders to develop and comply with the highest operating standards. Our monitoring process ensures transparency and continuous improvement in our sustainability efforts, aligning with our broader commitment to building a sustainable world for everyone.

Furthermore, climate change mitigation and energy efficiency are addressed within our company through policies that support the development and implementation of activities which are aligned with an inside-out perspective of reducing impacts on climate and enhancing the efficiency of our operations. In this sense, our material impacts, risks and opportunities are primarily addressed by the following policies:

- OMV Petrom Group Code of Conduct

[MDR-P-65a] The OMV Petrom Group Code of Conduct serves as a central guideline applicable to all our employees, business partners, and representatives of OMV Petrom Group. It lays out OMV Petrom's specific commitments on transition to low carbon business, run responsible operations, foster people and communities, ethical business practices, corporate values and existing reporting channels. The policy promotes sustainable and responsible behavior toward employees, the environment, and society, ensuring comprehensive adherence across the organization. [MDR-P-65b]. The Code of Conduct is applicable across the OMV Petrom Group, its consolidated subsidiaries and its supply chain. Adherence to the Code of Conduct is mandatory for everyone working for OMV Petrom or acting on behalf of, with, and for OMV Petrom. All business partners, and other individuals acting on behalf of OMV Petrom must comply with all relevant laws and regulations and follow our Code of Conduct or equivalent standards if they have their own adequate regulations in place. [MDR-P-65c]. The Executive Board of OMV Petrom assumes accountability for implementing the Code of Conduct. The fundamental values established in the Code of Conduct are guided by recognized best practices and international standards such as the goals set forth by the Paris Agreement, the UN Sustainable Development Goals (SDGs), the International Labour Organization (ILO), the UN Guiding Principles on Business and Human Rights, and by adherence to the United Nations (UN) Global Compact [MDR-P-65d]. Key internal stakeholders are directly engaged in setting the policy [MDR-P-65e]. The Code of Conduct is publicly accessible on the corporate website. The policy is communicated through internal channels to ensure all employees are aware of and understand its contents [MDR-P-65f]. An updated version of the Code of Conduct was approved by the Executive Board in December 2024 and will be made publicly available beginning 2025.

- Human rights Policy Statement

[MDR-P 65a] The policy outlines the company's commitment to upholding human rights across its business operations and supply chain. The Policy is aimed at advancing the company's positive impact related to creating opportunities for communities around suppliers and own operations, and at preventing the negative impacts of community dependence on OMV Petrom. This commitment is a guiding principle for handling human rights issues in

daily business activities, encompassing specific obligations like workers' rights, protective measures, vulnerable groups, environmental and climate change effects. The policy also details the company's due diligence process, grievance management, awareness, and communication strategies. [MDR-P-65b, f] The Policy Statement is applicable across the OMV Petrom Group, its consolidated subsidiaries and its supply chain and it is accessible through the company's internal regulatory platform and our corporate website.

[MDR-P-65c] The most senior level in OMV Petrom that is accountable for the implementation of the policy are the EB members. Business Heads (General Managers, VPs or Asset Managers)] hold responsibility for its implementation. [MDR-P-65e] The process for defining policies is informed by multiple internal stakeholders and their expectations in relation to the company.

▶ HSSE Directive and HSSE Policy

MDR-P-65a]. The HSSE Directive establishes the principles and rules for managing Health, Safety, Security & Resilience, and Environment (HSSE) across all stages of the company's business and activities, including capital projects and mergers and acquisitions. It serves as a framework for managing HSSE aspects with the aim of safeguarding people, the environment, assets, and the company's reputation, in accordance with OMV Petrom's HSSE Policy and its vision and mission of "Committed to Zero Harm – Protect People, Environment and Assets" The HSSE Policy states high level objective for OMV Petrom's approach in the areas of health, safety and environment. [MDR-P-65b].The directive covers OMV Petrom Group [MDR-P-65c]. The directive lays down minimum expectations and requirements for different levels of functions, such as all staff, line management, senior management, corporate and divisional HSSE functions [MDR-P-65f].The Directive's requirements are communicated through internal channels, including training when major revision appears.

▶ GHG Management Framework

[MDR-P-65a]. The Greenhouse Gas (GHG) Management Framework outlines the commitment to achieving net-zero operational emissions by 2050, covering all GHG scopes, with specific targets set for 2025 and 2030. It includes systematic monitoring, reporting, and auditing of emissions, ensuring that operations are screened for GHG reduction and energy efficiency opportunities, implementing all financially viable measures. The framework mandates the quantification and documentation of impacts on GHG emissions (Scope 1-3) and energy efficiency potential, with a commitment to achieving net-zero for operations (i.e. Scope 1-2) by 2050 and developing a pathway for Scope 3. It also addresses the identification, analysis, and evaluation of climate change risks and opportunities, following the HSSE Risk Management Standard, and ensures that all climate-related risks are assessed in investments and M&A activities. The overarching objective is to systematically reduce emissions, enhance energy efficiency, and manage climate-related risks and opportunities through rigorous monitoring and adherence to best practices. [MDR-P 65b] The framework is applicable at OMV Petrom Group. [MDR-P 65c] Specific responsibilities are laid down for line management and senior management. [MDR-P e] Input and interests of key internal stakeholders were considered during the setting of the policy. [MDR-P 65e] The document is made available to the employees through the internal regulations' platform on company's intranet. For other interested parties such as authorities and auditors, the document is made available on request.

▶ Environmental Management Standard

[MDR-P 65a] The OMV Petrom Environmental Management Standard mandates that all its businesses and activities use energy responsibly, conserve primary energy resources, and implement energy management plans that are consistent with ISO 50001. It stipulates the assessment of environmental impacts and risks, ensuring adherence to performance requirements related to energy use, emissions, water use and discharge, raw materials, waste management, hazardous substances, and biodiversity protection. Key objectives include identifying and mitigating environmental impacts and risks, systematically monitoring and documenting GHG emissions, setting targets and KPIs for effective GHG management, and developing GHG forecasts aligned with business plans. The policy addresses material impacts, risks, and opportunities related to climate change and energy efficiency, requiring the implementation of financially viable carbon reduction measures. The process for monitoring includes systematic assessment and screening of GHG-related reduction risks and opportunities, ensuring compliance with the highest environmental standards. [MDR-P 65b] The Standard applies to all OMV Petrom group businesses and activities.[MDR-P 65c] Line management is responsible for the effective implementation of this standard in their operations/businesses. Asset Development Managers and Project Managers are responsible for the implementation of this standard in all relevant projects. [MDR-P-65d] For sites/operations holding a certificate according to ISO 14001 the requirement of the standard is covered by the certification.[MDR-P-65e] Within the setting of the Environmental Management Standard, all key internal stakeholders were consulted and their feedback

was taken into consideration.[MDR-P 65e] The document is made available to the employees through the company's internal regulations platform. For other interested parties such as authorities and auditors, the document is made available on request

- HSSE Risk Management Standard

[MDR-P 65a] The HSSE Risk Management Standard sets the framework and minimum requirements for managing health, safety, security, and environmental risks. It allows OMV Petrom to seize opportunities while prioritizing the protection of people, the environment, and assets, thereby maintaining business integrity. The standard outlines a process for identifying, assessing, controlling, documenting, and communicating HSSE risks.

- Enterprise-Wide Risk Management Standard (EWRM)

[MDR-P 65a] The aim of this standard is to define and support OMV Petrom's EWRM activities through: (1) clear, continuous and consistent risk management process across OMV Petrom Group, from the operational level to the OMV Petrom Executive Board), (2) documentation of clear accountability and ownership of risk and EWRM activities and (3) explanation of the relationship between EWRM and related directive, procedures and committees. This standard addresses all major risks within our organization.

[MDR-P b-f] For further information regarding the Enterprise Wide Risk Management Standard, please refer to Economic value chapter.

[DR E1-3] **Actions and resources in relation to climate change policies**

[E1-3.29a, b, ESRS 2 MDR-A68 a-c] To prevent and, wherever applicable, mitigate the impacts and risks identified in relation to Climate change, OMV Petrom has defined the following key actions, as described in the table below. By increasing zero carbon sales, implementing neutralization measures such as Carbon Capture and Storage (CCS), and improving operational efficiency, we address the negative impacts related to GHG emissions from our operations and products sold. These efforts help mitigate the emissions and energy consumption that result inherent to the oil and gas industry. This has a positive impact on reducing GHG emissions through the energy transition, supporting society's shift from a linear to a sustainable economy by offering diversified products with a lower carbon footprint.

[ESRS 2 MDR-A.69a; AR21] Projects selection and prioritization could be influenced also by regulatory and market developments and might end up in different allocation between technologies. The overall planning of relevant investments for the implementation of the action plan includes non reimbursable financial support.

[E1-3.29 c; ESRS 2 MDR-A69b] The CAPEX required to implement the actions taken in 2024 as shown in the table below is included in the Group total CAPEX; for the Group's total CAPEX and its reconciliation to the investments shown in the cash flow statement, refer to Director's Report chapter, section "Capital Expenditure (CAPEX)" and the Consolidated Financial Statements, Consolidated statement of cash flows".

Key actions are defined as those requiring CAPEX of EUR > 5 mn for their implementation. CAPEX includes additions to property, plant and equipment and to intangible assets (including IFRS 16 right-of-use assets) and expenditures for acquisitions as well as equity-accounted investments and other interest for pre-defined Sustainability CAPEX categories. Decommissioning assets, government grants and other additions that by definition are not considered capital expenditure are not included in gross CAPEX figures. Within the boundaries of applicable accounting standards, expenditure incurred during project implementation is generally capitalized, thus included in the CAPEX figures. Figures are not validated by external bodies. For the material topic Climate change, the key actions mainly refer to activities in Europe, the majority of them in Romania.

Due to the threshold of > EUR 5 mn per project, the CAPEX figures in the table below do not represent the total CAPEX OMV Petrom allocated to addressing climate mitigation.

Decarbonisation lever	Key actions	Status	Expected outcome	Contribution to policy objective / target	Scope	Time horizon	CAPEX 2024 (bn RON)	CAPEX 2025-2030 (bn RON)	Related IRO[1]	Achieved GHG reduction 2024 vs. 2019 [mn tCO2e]	Expected GHG reduction 2030 vs. 2019 [mn tCO2e]

Metrics and targets

[DR E1-4] **Targets related to climate change mitigation**

[E1-4.33, E1-4.34a, b, c,d, f, AR 23, MDR-T-d, j]

GHG Emission Reduction Targets

GHG Emission Reduction Targets	M.U.	Base year (2019)	2024 Progress	2030 target
Scope 1-3 GHG Emissions (market based)				
GHG Scope 1 & 2	%	100	(17)	(30)
GHG Scope 1 & 2 & 3	%	100	(11)	(20)
E&P Methane Intensity	%	n.a.	0.32	0.2
Carbon Intensity of Energy Supply	%	100	1	(20)

[MDR-T-80a, e] Mitigating climate change is a strategic priority for our business. To this end, we have set decarbonization targets to support our strategic objective to decarbonize our operations and reduce our environmental impact on climate. The decarbonization targets are part of OMV Petrom's Strategy 2030, reflecting our commitment to driving the energy transition in Southeastern Europe (SEE) and achieving Net Zero operations by 2050. This commitment and subsequent targets are in line with the objectives of our GHG Management Framework and Code of Conduct.

[MDR-T 80 f, g] While the methodology for targets setting did not rely on a science-based approach, sectoral decarbonization pathways or climate scenarios, we have considered future market and regulatory developments and taken into consideration business-related parameters that are relevant for our strategic development, such as:

- Regulatory and legal context: the main regulatory requirements identified at EU level, which have a direct impact on our business, are the EU's decarbonization targets, such as the ones set for the transport sector. These are part of the broader European Green Deal and Fit for 55 package which aim to reduce the net greenhouse gas emissions by at least 55% by 2030, compared to 1990 levels.
- Shareholder needs for setting GHG targets that balance sustainable long-term value by transitioning to cleaner energy sources while ensuring effective capital allocation and robust financial performance; specific considerations for setting GHG emissions reduction targets for:
  - Scope 1&2: business target to decarbonize own operations by 2030 (relying on several emissions reduction and energy efficiency initiatives), supporting the company's long-term ambition of Net Zero operations by 2050
  - Scopes 1-3 target: CCS investments play a key role in achieving our overall carbon footprint reduction.
- Market research for prognosis of products demands, with specific considerations for setting GHG emissions reduction targets for:
  - Scope 3: portfolio development to meet our clients' demand (ensure continuity of supply for the strong demand forecasted until 2030) while helping our customers to decarbonize, thereby reducing Scope 3 emissions over time;
- High level review of main GHG targets in comparison with industry peers (including by reviewing investments in key initiatives, such as CCS)

Regulatory and legal context, market research for prognosis of products demands and shareholders needs formed the significant assumptions for our operational scenarios and related decarbonization targets setting. The assumptions for target setting were based on market development, internal estimates and a projected slower energy transition in Southeastern Europe compared to Western Europe, while still ensuring security of supply for our market.

The final targets were developed bottom-up (by calculating potential emissions reduction from key decarbonization projects) and adjusted with a top-down ambition established by OMV Petrom leadership.

[E1-4 34f, AR30a] The contribution of the decarbonization levers to achieve the GHG emissions reduction target is covered in sections E1-1 Transition Plan and E1-3 Key actions.

[AR 30b] OMV Petrom tested an innovative technology for carbon capture and utilization at the Petrobrazi refinery. OMV Petrom is a partner in an ambitious European project to address CO2 emissions through carbon capture and conversion technologies. Over a five-month period in 2024, we captured the CO2 from flue gasses released by the cogeneration unit, further converting it electrochemically into a marketable product.

[AR 30c] OMV Petrom's emission reduction activities are organized into decarbonization levers, as detailed above. These levers encompass investments identified during OMV Petrom's mid-term planning aligned with the Strategy 2030 and its climate objectives. Scenario analysis forms the foundation for developing this strategy, setting targets, and planning corresponding investments. The business cases for these investments are evaluated based on a base case scenario, informed by the IEA's Announced Pledges Scenario (APS) and supplemented by other external and internal market analyses. Furthermore, these investments are subjected to a stress test aligned with a "net zero emissions by 2050" scenario, primarily based on the IEA's Net Zero Emissions by 2050 (NZE) scenario.

[E1-4.34c, E1-4.AR 25a-b] Following an internal analysis on operational development in the last years, we identified an operational year that presents a business-as-usual operational scenario that was not influenced by deviations in the economic and market patterns generated by international crises such as the COVID-19 pandemic. Taking into consideration an internal stakeholder review and following benchmarking examples, we have elected to use 2019 as the baseline year for our decarbonization targets, as it best represents the business-as-usual scenario.To reflect the most up-to-date scientific understanding of our emissions, we have updated our calculations by aligning with the latest Global Warming Potentials (GWP) from IPCC's Sixth Assessment Report (AR6). When targets were approved, Scope 1 GHG emissions were calculated using the GWP from AR4, in line with the internal rules. Consequently, baseline year value and monitoring performance against targets were updated to AR6. However, for comparability of our reported emissions, we disclose the baseline value in both scenarios, AR4 and AR6. The baseline value for Scopes 1, 2 and 3 GHG emissions using AR6 is 29.1 million tCO2e (2019 AR4: 28.9 million tCO2e).

In 2024, no base year value recalculation was triggered. The base year will remain unchanged unless significant changes in target or reporting boundaries occur. The updating of the GWPs is not considered a recalculation of the base year value as this update is a recurrent activity, in line with the latest scientific data.

Base year re-calculation: Based on applicable internal rules, should a significant change in GHG emissions occur due to mergers/acquisitions/divestments, a re-calculation of the base year will be done for the GHG reduction targets achievement assessment (including LTIP, senior management remuneration, and Group incentive plans annual bonus target achievement). A significant change means that the cumulative effect of mergers/acquisitions/divestments in the reporting year represents a higher effect than 5% on baseline year absolute Scope 1-3 emissions which are in scope of the GHG targets.

[MDR-T-i] Any changes in targets and corresponding metrics or underlying measurement methodologies will be transparently disclosed on an annual basis. An explanation of the rationale for these changes and their effect on comparability will also be provided, ensuring clarity and consistency in reporting.

Additional notes regarding our methodology for specific targets

- Scope 1-2 GHG emissions target – which refers to OMV Petrom's Scope 1 direct & Scope 2 (market-based) indirect GHG emissions.

[MDR-T-80b] The defined target level to achieve a 30% absolute GHG emissions reduction by 2030, measured in tCO2e (carbon dioxide equivalent), providing a clear and quantifiable benchmark for progress.

[MDR-T-80c] The scope includes OMV Petrom's own operations (Scope 1) and upstream value chain energy generation (Scope 2). We count the Scope 1 direct GHG emissions and Scope 2 indirect GHG emissions for fully owned assets and assets where OMV Petrom's interest is less than 100% but more than 50%, and where OMV Petrom operates a joint venture.The target excludes assets which are not majority owned by OMV Petrom and assets over which the company has no operational control. Geographically, the targets cover all assets and activities of OMV Petrom, ensuring comprehensive coverage of the company's environmental impact.

[MDR-T-80d] The baseline year is 2019, with a recorded baseline value of 4.7 million tCO2e, encompassing Scope 1 and Scope 2 emissions as per IPCC AR6 guidelines (2019 AR4: 4.5 million tCO2e). This baseline provides a reference point from which progress is measured and evaluated over time.

[MDR-T-80f] Achieving Net-zero operations (Scopes 1 and 2) by 2050 includes own measures as well as CCU/S, GHG removals (acc. to ESRS definitions), avoided emissions, carbon credits or any other feasible neutralization measure. GHG removals (acc. to ESRS definitions), avoided emissions and carbon credits are excluded as a means of achieving 2030 GHG emission reduction targets.

[MDR-T-80h] The GHG target was proposed by HSSE and Strategy, discussed with the Investor Relations (IR) team, Supervisory Board (SB), Executive Board (EB) and other relevant business functions. The target was approved by OMV Petrom EB and SB.

[MDR-T-80j] The responsibility for target definition and performance monitoring against disclosed targets lies with OMV Petrom corporate HSSE–Environmental Management and CFO Controlling, with an annual monitoring frequency.

▶ Scope 1-3 GHG emissions target

This target encompasses OMV Petrom's Scope 1 direct & Scope 2 (market-based) indirect & Scope 3 indirect GHG emissions.

[MDR-T-80b] By 2030, OMV Petrom aims to achieve a 20% absolute reduction in Scope 1-3 GHG emissions. The unit of measurement for this target is metric tons of CO2 equivalent (tCO2e).

[MDR-T-80c] The scope of the target includes OMV Petrom Group's own operations, upstream and downstream value chain. Specifically, it covers: Scope 1 direct GHG emissions and Scope 2 indirect GHG emissions for fully owned assets and assets where OMV Petrom's interest is less than 100% but more than 50%, and where OMV Petrom operates a joint venture and Scope 3 indirect GHG emissions from category 11 (use of sold products) to third parties on an equity production basis.

In 2024 the percentage of Scope 3 emissions, covered by the target, out of the total Scope 3 emissions is 89% (2019: 94%).

Scope 1&2 GHG emissions of assets not operated/majority owned by OMV Petrom, intracompany sales, and purely financial traded volumes are excluded.

[MDR-T-80d] The baseline year for these targets is 2019, with a baseline value of 29.1 million tCO2e, as per IPCC AR6 standards (2019 AR4: 28.9 million tCO2e).

[MDR-T-80f] Achieving Net-zero operations (Scope 1&2) by 2050 includes own measures as well as CCU/S, GHG removals, avoided emissions and carbon credits or any other feasible neutralization measure. Achieving Scope 3 GHG emission reduction includes own measures as well as CCU/S in the value chain and any additional established CCS capacity. GHG removals, avoided emissions and carbon credits are excluded as a means of achieving 2030 GHG emission reduction targets.

[MDR-T-80h] The target was proposed by HSSE and Strategy, discussed with Controlling, IR, EB, SB, and other relevant business functions. The target was approved by OMV Petrom EB and SB.

[MDR-T-80j] The responsibility for target definition and performance monitoring lies OMV Petrom corporate HSSE–Environmental Management and CFO Controlling, with an annual monitoring frequency.

▶ E&P Methane Intensity

This indicator refers to the volume of methane emissions from our E&P oil and gas assets as a percentage of the volume of the total gas that goes to market.

[MDR-T-80b] OMV Petrom aims to achieve a methane intensity of less than 0.2%, measured in scm (standard cubic meters) CH4/ scm of gas sold by 2030.

[MDR-T-80c] The target encompasses E&P own activities, from exploration to production, including gas processing. As methane is a greenhouse gas, counted under our Scope 1, the methane estimation follows the same principle mentioned for Scope 1, also meaning that in scope for this target are methane emissions from fully owned assets and assets where OMV Petrom's interest is less than 100% but more than 50%, and where OMV Petrom operates a joint venture. Emissions from fugitives, venting, and incomplete combustion are included, while methane emissions from assets not operated or not majority owned by OMV Petrom, as well as exploration drilling activities, are excluded.

[MDR-T-f, g] The methane intensity reduction target set in 2021 stems from the need to reduce methane emissions in the oil and gas sector, now, also in line with EU requirements (EU methane regulation) and IEA expectations for the oil and gas sector. The approach for calculating the methane intensity is in line with the Oil and Gas Climate Initiative's (OGCI) methane intensity, calculated as the ratio of methane emissions to marketed gas sales. However, the actual methane emissions might be subject for an update, following the recent adoption of the EU Methane Regulation.

According to the legal requirements, the first methane measurement reports are to be available later, in 2025.

[MDR-T-h] This target was proposed by OMV Petrom corporate HSSE, discussed and agreed with SB, EB, Group Strategy and other relevant business function. The target was approved by OMV Petrom EB.

[MDR-T-j] The responsibility for target definition and performance monitoring against disclosed targets lies with OMV Petrom corporate HSSE–Environmental Management and E&P Emissions Management department, with an annual monitoring frequency.

▶ Carbon Intensity of Energy Supply

Carbon intensity of energy supply represents total GHG emissions (scope 1 & 2 & 3) divided by total energy content (of sold energy products: gas to energy, oil to energy, power and biofuels).

[MDR-T-80b, d] OMV Petrom has set a strategic target to reduce the carbon intensity of its energy supply by 20%. The target is measured in grams of CO2 equivalent per megajoule (gCO2e/MJ) and is relative to a baseline year of 2019, which had a carbon intensity of 70.7 gCO2e/MJ as per IPCC AR6 guidelines (AR4 2019: 70.2 gCO2e/MJ).

[MDR-T-80c] The scope of this target includes OMV Petrom's own operations, upstream value chain (energy generation), and downstream value chain (product use). Specifically, it covers Scope 1 direct GHG emissions, Scope 2 indirect GHG emissions, accounted as 100% for fully owned assets and for assets where the OMV Petrom's interest is less than 100% but more than 50%, and where the OMV Petrom's interest is 50% or less if OMV Petrom is the operator of a joint venture, and OMV Petrom (E&P, R&M, G&P) Scope 3 indirect GHG emissions from category 11 (3.11) "use of sold products" to third parties on an equity production basis. Out of scope are Scope 1&2 GHG emissions of assets not operated/not majority owned by OMV Petrom, intracompany sales and purely financial traded volumes, or other Scope 3 indirect GHG emissions. The geographical coverage for this target is the entire OMV Petrom Group.

[MDR-T-80f, g] To achieve this target, OMV Petrom envisages to implement measures such as CCS in its operations and value chain, as well as to investigate other technologies. GHG removals, avoided emissions and carbon credits are excluded as a means of achieving 2030 GHG emission reduction targets.

[MDR-T-80h] The target was proposed by OMV Petrom corporate HSSE-Environmental Management and Strategy, discussed with IR, SB, EB and other relevant business functions. The target was approved by the OMV Petrom EB and SB.

[MDR-T-80j] The responsibility for target definition and performance against disclosed targets monitoring lies with OMV Petrom corporate HSSE–Environmental Management and CFO Controlling, with an annual monitoring frequency.

[DR E1-5] **Energy consumption and mix**

We monitor on a yearly basis the energy produced, purchased, consumed and sold, in order to evaluate the business performance and to identify areas for further improvements. Energy data is used in and by the company to describe performance, enable informed decision making and provide information to internal and external stakeholders according to pre-defined criteria.

[E1-5.37a-c, E1-5.38a-e, AR 34]

Energy consumption

Energy consumption and mix	2024	2023
Fuel consumption from crude oil and petroleum products (MWh)	235,314	438,552
Fuel consumption from natural gas (MWh)	15,813,257	13,588,944
Total fossil energy for own consumption (MWh)	**12,066,045**	**10,561,190**
Share of fossil sources in total energy consumption (%)	**99**	**98**
Total renewable energy consumption (MWh)	**90,491**	**177,987**
Share of renewable sources in total energy consumption (%)	**0.74**	**1.65**
Total energy for own consumption[1] (MWh)	**12,183,460**	**10,764,571**

[1] Refers to the total energy used for operations based on site calculations with specific data, conversion factors, and methodologies.

[MDR-M.77a-c] All energy data is collected for activities that OMV Petrom operates or where it holds more than a 50% stake and has controlling influence. Operational control refers to companies fully controlled by OMV Petrom according to IFRS requirements.

The Energy Consumption metric includes the total direct energy use for work-related activities under OMV Petrom's control. It covers energy consumptions from activities such as exploration, construction, production, transportation, and abandonment in E&P division, refinery in Petrobrazi and electricity production in Brazi. Exclusions are road and rail transport, flaring, venting, and other hydrocarbon losses or disposal. The calculation is based on total energy input plus gross electricity production from non-fuel renewable sources minus total energy output.

Consumption of purchased or acquired electricity, heat, steam, or cooling from fossil sources includes only the purchased and consumed amounts. Electricity, heating, cooling, or steam consumed from own generation is included in fuel consumption.

[E1-5.38,41] For simplification purposes, OMV Petrom accounts all own activities (including the ones performed in office buildings) as being part of the high climate impact sector, as per ESRS understanding.

[E1-5.39]

Total energy sold

Total energy sold - thereof from non-renewable source	2024	2023
Total energy sold - thereof from non-renewable source - thereof fuel sold (MWh)	91,650,598	95,196,588
Total energy sold - thereof from non-renewable source - thereof electricity sold (MWh)	7,089,090	6,537,603
Total energy sold - thereof from renewable source (MWh)	**2,078,350**	**2,442,492**

[MDR-M.77a, c] Gross electricity production from a fuel source, measured in MWh, covers gross electricity generation in all types of power plants. The gross electricity generation at plant level is defined as the electricity measured at the outlet of the main generators. This includes the amount of electricity used in the plant auxiliaries and in the generators. Gross electricity production from non-fuel renewable sources covers gross electricity generation from non-fuel renewable sources, such as photovoltaic or wind. It is defined as the electricity measured at the outlet of the main inverters and includes the amount of electricity used in the plant auxiliaries and in the inverter.

[MDR-M.77b] These metrics are not verified by external third parties.

[E1-5.40]

Energy intensity

Energy intensity per sales revenue	2024	2023	% 2024 / 2023
Total energy consumption from activities in high climate impact sectors per sales revenue from activities in high climate impact sectors (MWh/RON mn)	341	Not reported	n.a.

[E1-5.43, AR 38b] The Net revenue used to calculate the Energy intensity is disclosed in the consolidated financial statements, note 19 "Sales revenues", line "Total sales revenues".

[MDR-M 77 a-c] The energy intensity ratio is calculated as total energy consumption (MWh) divided by total sales revenue (million RON). For details on the methodology of this metric, please refer to the 'Energy consumption' section, above.

[DR E1-6] **Gross scopes 1, 2, 3 and total GHG emissions**

GHG Emissions

		Retrospective		
	2024	**2023**	**% 2024 / 2023**	**Base year (2019)**
Scope 1 GHG emissions				
Gross Scope 1 GHG emissions (tCO_2eq)	3,802,683	3,451,026	110	4,611,046
CH_4 (t)	6,075	8,625	70	40,286
Percentage of Scope 1 GHG emissions from regulated emission trading schemes (%)	77	72	107	54
Biogenic emissions of CO_2 from the combustion or bio-degradation of biomass not included in Scope 1 (tCO2eq)	0	Not reported	n.a.	Not reported
Scope 2 GHG emissions				
Gross market-based Scope 2 GHG emissions (tCO_2eq)	60,676	57,097	106	44,844
Significant Scope 3 GHG emissions				
Total Gross indirect (Scope 3) GHG emissions (tCO_2eq)	24,615,617	23,878,469	103	26,059,024
1 Purchased goods and services	1,243,216	Not reported	n.a.	Not reported
2 Capital goods	72,980	Not reported	n.a.	Not reported
3 Fuel and energy-related activities (not included in Scope 1 or Scope 2)	17,722	Not reported	n.a.	Not reported
5 Waste generated in operations	87,243	Not reported	n.a.	Not reported
10 Processing of sold products	1,203,260	1,151,652	104	1,632,266
11 Use of sold products	21,991,196	22,726,817	97	24,426,758
15 Investments	0	Not reported	n.a.	Not reported
Biogenic emissions of CO_2 from the combustion or bio-degradation of biomass not included in Scope 3 (tCO2eq)	527,895	Not reported	n.a.	Not reported
Total GHG emissions				
Total GHG emissions (market-based) (tCO_2eq)	28,478,976	27,386,592	104	30,714,913

[E1-6.50, AR 40] All greenhouse gas data for Scope 1, Scope 2, and Scope 3 emissions is collected for activities which OMV Petrom operates or where OMV Petrom holds a stake of more than 50% and exerts a controlling influence. Operational control (fully consolidated companies) are companies over which OMV Petrom has full control according to IFRS requirements.

All third party sales are considered for Scope 3 category 10 and 11. When a company participates in joint operations, 100% of the respective company sales are accounted, however this value usually only represents its share in the joint operation. The exception to this is Scope 3 Category 15 (Investments), which follows the equity approach. The share of the investment's Scope 1, 2, and, where relevant, Scope 3 emissions are accounted for in this category. If an investment is made with a business partner in OMV Petrom's upstream or downstream value chain, the respective Scope 3 emissions are included in the appropriate category.

[E1-6.AR 39a, MDR-M.77a] OMV Petrom calculates its corporate carbon footprint (Scope 1, 2 and 3 emissions) following the principles, requirements and guidance provided by the GHG Protocol Corporate Standard (version 2004), the GHG Protocol Scope 2 Guidance (version 2015) and the GHG Protocol Corporate value chain (Scope 3) Accounting and Reporting Standard (Version 2011), expressed in tons CO2e.

We are following our GHG Management Framework standard (in line with GHG Protocol) and actively working to mitigate the GHG emissions along the value chain. To ensure that the approach for GHG accounting and reporting is properly implemented, we perform regular data quality checks.

[MDR-M.77b] The emissions value for the EU-ETS installations, covered by Scope 1, are verified by a third-party accredited company, according to legal requirements. Other metrics are not verified by an external body, except for our assurance provider.

[MDR-M.77c] Total GHG emissions: The total GHG emissions are calculated as the sum of 100% of gross Scope 1, 100% gross Scope 2 (market-based) emissions and 100% of gross Scope 3 GHG emissions (all categories relevant for oil and gas industry that cross the materiality threshold, as defined in our internal regulation). The relevant categories are listed as metrics. Some data included in this metric undergoes verification by an external body when GHG emissions are regulated under an EU-ETS system.

[E1-6.AR 39c] Atmospheric emissions that contribute to global warming are specified in the Kyoto Protocol. There are six greenhouse gases covered by the Kyoto Protocol: carbon dioxide (CO2), methane (CH4), nitrous oxide (N2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF6). HFCs, PFCs and SF6 are of minor relevance for OMV Petrom. The global warming potential (GWP) is a relative scale which compares the gas in question to that of the same mass of carbon dioxide.

[E1-6.AR 39d] OMV Petrom applied the conversion factors defined by the Intergovernmental Panel on Climate Change (IPCC), Fourth Assessment Report AR4, GWP values for 100-year time horizon. However, since 2024 has been applying the global warming potentials from the Sixth Assessment Report (AR6) to calculate CO2e emissions of non-CO2 gases) and API GHG Compendium.

[E1-6.47, AR 42c] The reporting periods of entities within OMV Petrom's value chain covered within this calculation do not differ from the OMV Petrom's general financial reporting dates. Therefore, no significant changes between the undertaking and its upstream and downstream value chain can be mentioned.

▶ Scope 1 GHG Emissions

[MDR-M.77c] Scope 1 emissions are defined as direct emissions from all sources under direct control of the company (owned or operated), such as stationary sources, mobile sources, process emissions, flaring/venting emissions, fugitive emissions. OMV Petrom's Scope 1 emissions (measured in tonnes of CO2eq) from the business divisions (R&M, G&P and E&P) come primarily from fuel combustion, process emissions flaring, venting and fugitive emissions.

[MDR-M.77a, E1-6.AR 39b] Scope 1 GHG emissions are calculated by multiplying activity data with emission factors. OMV Petrom uses emission factors from various sources, such as the IPPC (since 2024 has been applying the global warming potentials from the IPPC Sixth Assessment Report (AR6 – 100 years) to calculate CO2e emissions of non-CO2 gases) and API GHG Compendium. OMV Petrom includes the greenhouse gases CO , CH , and N O in its Scope 1 calculations. OMV Petrom is also subject to EU-ETS report in accordance with the EU-ETS methodology. Four of our operating installations were under the EU Emissions Trading Scheme (EU-ETS) at the end of 2024.

Activity data is derived from site-specific information, utilizing a combination of direct measurements, calculations, and estimations. When direct measurements or calculations are not feasible, estimations are used to determine the energy consumption. Potential limitations of the methodology include the accuracy and reliability of estimations when direct measurements and calculations are not feasible. Potential limitations include the accuracy of measurement devices, the reliability of estimation methods, variations in emission factors, and potential gaps in data collection from all relevant sources.

[MDR-M.77b] Some data included in this metric undergoes verification by an external body when GHG emissions are regulated under the EU-ETS system.

[MDR-M.77a, E1-6.AR 44] The percentage of Scope 1 GHG emissions from regulated emission trading schemes is calculated by dividing the sum of GHG emissions from EU ETS installations by the total Scope 1 GHG emissions. Limitations can arise when emissions are reported in the company's annual sustainability statement before the final verification report is issued by an external body due to differing reporting deadlines. Emission trading systems may also vary in terms of specific deadlines and processes, tailored to their respective regulatory environments. OMV Petrom doesn't own or control any non-EU ETS installation.

Biogenic CO2 emissions are calculated as CO2 released from the combustion or decomposition of organic materials, such as biomass and biofuels used or sold by OMV Petrom. This is reported separately referring to each scope of GHG emissions. Biogenic CO2 emissions not included in Scope 1 GHG emissions is derived by site-specific consumptions of renewable fuels, including biomass, and established emission factors published by IPCC.

▶ Scope 2 GHG Emissions

[MDR-M.77c] Scope 2 emissions are defined as indirect GHG emissions that occur at the point of energy generation (owned or operated by a third party) for electricity, heat, cooling or steam imported (i.e. purchased) for use on site. OMV Petrom's Scope 2 emissions (measured in tonnes of CO2eq) are those related to the production of the energy we

purchased for our operations. The Scope 2 emissions are primarily generated by R&M and E&P business segments.

[MDR-M.77a, E1-6.AR 39b] Scope 2 GHG emissions are calculated by multiplying activity data (MWh of energy purchased recorded and invoiced) with GHG emission factors from suppliers - energy mix or general (country) energy mix (International Energy Agency) of the locations if the supplier label is not available. Latest labels available are used.

▶ Scope 3 GHG Emissions

[MDR-M.77c] Scope 3 emissions are defined as other indirect emissions that are generated by our products or caused by supply chain activities. The metric is an aggregated emissions value of the relevant Scope 3 categories. OMV Petrom's most relevant Scope 3 emissions (measured in tonnes of CO2eq) result from the energy consumption by our customers and stakeholders, including the products use. Scope 3 emissions from the use and processing of sold products (excluding pure "trading margin" sales and intracompany sales) are included in the total Scope 3.

Biogenic CO2 emissions are calculated by measuring the CO2 released from the combustion or decomposition of organic materials, such as biomass and biofuels. This is reported separately referring to each scope of GHG emissions. The value of Biogenic CO2 emissions not included in Scope 3 GHG emissions is derived from energy sales from renewable sources such as biofuels, and established emission factors by IPCC.

[MDR-M.77a, E1-6.AR 39b, E1-6.AR 46g-i, ESRS 2-BP-2.10b, ESRS 2-BP-2.10c] Scope 3 GHG emissions are measured using inputs from specific activities within OMV Petrom's upstream and downstream value chain. Emission factors associated with Category 1 - Purchased goods and services and Category 2 - Capital goods, are calculated using primary data obtained from suppliers or other value chain partners. In 2024, 1% of Scope 3.1 "Purchased goods and services" and 5% of Scope 3.2 "Capital goods" were calculated using data obtained from suppliers. This corresponds to less than 1% of total Scope 3 emissions. This metric is calculated as the share of Scope 3 emissions calculated using emission factors from the clients (category 1 & 2) divided by total Scope 3 emissions.

As for the emission factor used in calculating the remaining Scope 3 categories, OMV Petrom has made use of estimates. OMV Petrom calculates its carbon footprint (Scope 1, 2 and 3 emissions) following the principles, requirements and guidance provided by the GHG Protocol Corporate Standard (version 2004), the GHG Protocol Scope 2 Guidance (version 2015) and the GHG Protocol Corporate value chain (Scope 3) Accounting and Reporting Standard (Version 2011). We use emission factors from different sources, such as the IPCC and Plastics Europe. Detailed information regarding the calculation methodology for each Scope 3 category is presented below.

Category 1 Purchased goods and services: The aggregated Scope 3.1 emissions related to emissions from purchased goods and services and thereof the share of emissions from feedstock is reported separately.

The calculation method for emissions combines an average data method for purchased refinery feedstock and a hybrid method for purchased goods and services, incorporating supplier-specific factors when available. Activity data examples include the net amount of refinery feedstock purchased, mass or volume of goods and services, and the amount spent on goods and services by product type. Emission factors used are based on the energy content of refinery feedstocks, the quantity of purchased goods and services, the economic value of these goods and services, and supplier-specific emission factors per unit of economic value. Using this method carries potential limitations such as inaccuracies in emission factors, especially for supplier-specific data, and variability in data quality across different suppliers and products. Additionally, relying on average data for feedstock might not capture specific emissions accurately. Differences in reporting standards and time lags in data availability can further affect the precision and reliability of the calculated emissions.

Category 2 Capital goods: Scope 3.2 covers upstream (i.e., cradle-to-gate) emissions from the production of capital goods purchased or acquired by OMV Petrom in the reporting year.

Emissions are calculated by multiplying activity data with emission factors. Activity data include amount spent on capital goods by product type. The emission factors used are those associated with the purchased goods & services per unit of economic value and supplier-specific emission factors for the purchased goods and services per unit of economic value.

Category 3 Fuel and energy-related activities: Scope 3.3 is defined as emissions related to the production of fuels and energy purchased and consumed by OMV Petrom in the reporting year that are not included in Scope 1 or Scope 2.

Emissions are calculated by multiplying activity data with emission factors. Activity data include amount of purchased and consumed fuels, electricity, heat, steam and cooling. The emission factors used are based on the average emission factors for upstream emissions per unit of consumption.

Category 5 Waste generated in operations: Scope 3.5 is defined as emissions from third-party disposal and treatment of waste generated within OMV Petrom's operations in the reporting year.

Emissions are calculated by multiplying activity data with emission factors. Activity data include total mass of waste generated in operations per disposal method. The emission factors used are based on the average emission factors based on waste disposal types.

Category 10 Processing of sold products: Scope 3.10 are defined as emissions from processing of sold intermediate products by third parties subsequent to sale by OMV Petrom. Pure trading margin sales as well as intracompany sales are excluded from category 10 and 11.

Emissions are calculated by multiplying activity data with emission factors. Activity data include mass or volume of sold intermediate products per product type and the process(es) involved in transforming or processing sold intermediate products into a usable state final product subsequent to sale by the reporting company. Emission factors used are based on the average emission factors for processes stages required to transform the sold intermediate product into a final product.

Category 11 Use of sold products: Scope 3 Category 11 are defined as emissions from the use of goods and services sold by OMV Petrom in the reporting year. Pure trading margin sales as well as intracompany sales are excluded from category 10 and 11.

Emissions are calculated by multiplying activity data with emission factors. Activity data include mass or volume of sold products per product type. Emission factors used are based on the average emission factors for use of sold products.

Category 15 Investments: Scope 3 Category 15 are defined as emissions associated with OMV Petrom´s investments in the reporting year, not already included in scope 1 or scope 2 including emissions from subsidiaries and joint ventures where OMV Petrom does not have operational control. Emissions quantification follows the equity approach.

Justification for exclusion of certain Scope 3 categories

Category 4 "Upstream transportation and distribution" is excluded based on IPIECA guidelines, which suggest that upstream transportation and distribution emissions should not be counted separately, as the fuels used are already accounted for in Scope 3 Category 11, "Use of sold products". This prevents double counting.

Category 6 "Business travel" is excluded to avoid double counting because the fuels involved are included under Category 11 "Use of sold products" (excluded based on IPIECA guidelines).

Category 7 "Employee commuting" are excluded to avoid double counting because the fuels involved are included under Category 11 "Use of sold products" (excluded based on IPIECA guidelines).

Category 8 Upstream leased assets: OMV Petrom`s leased assets such as offshore platforms and joint ventures are included in Scope 1 emissions. Thus, to prevent double counting these are not accounted for in OMV Petrom.

Category 9 "Downstream transportation and distribution" are excluded to avoid double counting because the fuels involved are included under Category 11 "Use of sold products" (excluded based on IPIECA guidelines).

Category 12 End-of-life treatment of sold products: OMV Petrom products, which are not used as fuels are accounted under Scope 3 category 10 "Processing of sold products". This category is not relevant for OMV Petrom.

Category 13 Downstream leased assets: Scope 3 Category 13 are defined as emissions from the operation of assets that are owned by OMV Petrom (acting as lessor) and leased to other entities in the reporting year that are not already included in scope 1 or scope 2. This category is applicable to lessors (i.e., companies that receive payments from lessees). Emissions of assets that are owned by OMV Petrom are included Scope 1 or 2. Therefore there are no emissions in this category.

Category 14 Franchises: Scope 3 Category 14 are defined as emissions from the operation of franchises not included in scope 1 or scope 2. A franchise is a business operating under a license to sell or distribute another company's goods or services within a certain location. OMV Petrom does not have any franchise activities.

[E1-6.53]

GHG Emissions intensity per sales revenue

GHG Emissions intensity per sales revenue	2024	2023	% 2024 / 2023
GHG emissions intensity, market-based (total GHG emissions per sales revenue, tCO2eq/RON mn)	796	Not reported	n.a.

[E1-6.55, AR 55] The Net revenue used to calculate the GHG Intensity is disclosed in the consolidated financial statements, note 19 “Sales revenues”, line “Total sales revenues”.

[MDR-M a-c] The GHG emissions intensity ratio is calculated as total Scope 1-3 GHG emissions (market based) divided by total sales revenue (million RON). For details on the methodology of this metric, refer to the Gross scopes 1, 2,3 GHG emissions information above.

[DR E1-7] **GHG Removals and Storage**

GHG removals and storage

Removals	2024	2023	% 2024 / 2023
Total GHG Removals (tCO_2eq)	0	-	-

[E1-7.56a, E1-7.58] In 2024, OMV Petrom did not have any GHG removals and storage resulting from projects in its own operations nor in its upstream or downstream value chain.

.

Carbon credits planned to be cancelled

Total amount of carbon credits outside value chain that are verified against recognised quality standards and cancelled (tCO2eq)	139,723
Total amount of carbon credits outside value chain planned to be cancelled in future (tCO_2eq)	74,977

[E1-7, 56b, E1-7-59 a,b] [E1-7, 56b, E1-7-59 a,b] The total amount of carbon credits outside of OMV Petrom’s value chain that are due to be canceled in the future is 74,977 t of CO2e. All of these credits are based on existing contractual agreements.

MDR-M 77 a-c] The total amount of carbon credits canceled iduring the reporting year is determined by documenting the number of carbon credits officially retired or canceled within the year. This involves monitoring credit transactions and ensuring they meet regulatory and voluntary offset program requirements. The total value is reported separately for the share by type of project, the share of projects within the EU, and the share of carbon credits that qualify as corresponding adjustment. Potential limitations include the accuracy and completeness of the records, possible delays in the credit cancelation processing, and adherence to evolving regulatory standards.

The metric relating to the total carbon credits canceled in the reporting year according to recognized quality standard is determined by tracking and verifying the number of carbon credits that have been officially retired or canceled within the reporting period, ensuring they align with established standards such as the Verified Carbon Standard (VCS) or the Gold Standard. This involves thorough documentation and validation of credit transactions against these quality standards. Potential limitations include issues with documentation accuracy and completeness, delays in the validation and cancelation processes, and the consistency in applying and interpreting the quality standards across different projects and registries.

The metric concerning total carbon credits to be canceled in the future is determined by identifying the number of carbon credits allocated for cancelation based on projected future needs. Potential limitations include uncertainties regarding future regulatory changes, market volatility affecting the availability and cost of carbon credits, and the accuracy of estimating future needs.

The metrics are validated by an external body other than the assurance provider in line with the respective recognized quality standards.

[DR E1-8] **Internal Carbon Pricing**

[DR E1-8 63 a,b; AR 65] OMV Petrom applies internal carbon pricing for investment decisions across all business segments. In the base case, the costs of CO2 emissions are included wherever carbon pricing schemes are in place. Additionally, a stress test based on a “net zero emissions by 2050” scenario is conducted, applying shadow prices to all of OMV Petrom’s Scope 1 emissions, except for certain activities in OMV Petrom, which fall outside of the EU ETS until 2030.

From 2030 onward, the internal carbon prices are applied to 100% of Scope 1 emissions.

The internal carbon prices applied are consistent with the carbon prices included in the mid-term planning (MTP). Base case carbon prices are informed by the IEA’s Announced Pledges Scenario (APS) and other external and internal market analyses, while the “net zero emissions by 2050” case prices are largely based on the IEA’s Net Zero Emissions by 2050 (NZE) scenario.

[DR E1-8 63 d] In 2024, the gross Scope 1 GHG emission volumes covered by the pricing schemes amounted to 2.9 mn t CO2 eq, representing 77% of total 3.8 mn Scope 1 GHG emissions.

In 2024, the gross Scope 3 GHG emission volumes were not covered by pricing schemes.

Pollution

Liquid hydrocarbon spills remain a significant environmental concern, with potential breaches of environmental regulations, health and safety issues, and environmental damage. The soils contamination, a common impact in the oil and gas industry, mainly results from accidental spills of hydrocarbon products, leaks from pipelines or contaminated effluent discharge. Pollutants consist mainly of hydrocarbon products (spills).

Air pollutants other than GHG emissions generated from our supplier's activities, our operations and the use of OMV Petrom's products negatively impact air quality and may have adverse effects on human health, biodiversity, and the ecosystems. The pollutants associated with our operations are attributed to various activities such as flaring, venting, fuel combustion for powering machinery, and transportation. In addition to these activities, air emissions can result from evaporation losses, fugitive emissions from tanks, equipment leakages and failures, and process safety incidents.

Health, Safety, Security, and protection of the Environment are embedded in all activities, according to OMV Petrom Group HSSE Policy and also in line with our HSSE Strategy 2030. We aim at preventing spills and appropriately managing the response in case of occurrence and minimizing our non GHG emissions.

Sub-topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Pollution of soil	Incidents that lead to hydrocarbon spills in soil	Act	Negative impact	OO	▶ Code of Conduct ▶ Human Rights Policy Statement ▶ HSSE Directive (including Major Accident Prevention Policy) ▶ Environmental Management Standard ▶ HSSE Risk Management Standard ▶ Incident, Emergency, Crisis and Business Continuity Management (Resilience) Standard ▶ Management of Change Standard
Pollution of air	The release of non-GHG emissions in the atmosphere directly negatively impacts air quality, while also indirectly impacting other environmental aspects (such as ecosystems) and human health.	Act	Negative impact	UVC, OO, DVC	▶ Code of Conduct ▶ Human Rights Policy Statement ▶ HSSE Directive ▶ Environmental Management Standard ▶ HSSE Risk Management Standard ▶ Management of Change Standard ▶ Corporate Procurement Directive ▶ Contractor HSSE Management

UVC Upstream value chain; OO Own Operations; DVC Downstream value chain

Impact, risk and opportunity management

[E2-1] **Policies**

[E2-1.14] OMV Petrom has the following policies in place to manage its material impacts related to pollution.

- Code of Conduct

[E2-1.15a, MDR-P-65a] We are committed to implementing loss prevention and control measures to avoid soil pollution, following regulatory frameworks and industry best practices. This includes promptly cleaning up any spills and conducting immediate assessments to prevent recurrence. Additionally, we aim to improve air quality around operational sites.

In 2024, we updated our Code of Conduct and reinforced our focus on environmental protection. We are committed to implementing loss prevention and control measures to avoid soil pollution, by following regulatory frameworks and industry best practice. Any spill shall be cleaned up promptly and immediate assessment shall be done to prevent further occurrence.

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

- Human Rights Policy

[MDR-P-65a] Our commitments under this policy include enhancing carbon efficiency, supporting the energy transition, and achieving net-zero operations by 2050. We also prioritize responsible management of natural resources and aim to minimize environmental impacts through the reduction of soil pollution and emissions.

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

- OMV Petrom HSSE Directive and the Major Accidents Prevention Policy, as Annex

[MDR-P-65a] The OMV Petrom HSSE Directive mandates that all projects are managed with comprehensive consideration of HSSE aspects throughout their entire lifecycle, from design to execution. This includes engineering facilities to meet relevant codes for safe and environmentally sound operations, conducting HSSE risk assessments, performing health, environmental, and social impact assessments, and ensuring technical integrity and quality assurance during facility development. Through the HSSE Policy, as part of the Directive, we minimize our impact on the environment by minimizing pollution.

The Major Accident Prevention Policy is an Annex to the HSSE Directive and sets out the principles for controlling the risk of a major accident by requiring the following actions: identification and assessment of all major hazards, establishing risk controls to prevent major accidents from occurring and feasible and viable mitigation measures to minimize the consequences of major accidents to people and the environment, independent of the likelihood of occurrence. Measures are put in place to control and limit the impact on people and the environment if such events do occur.

[MDR_P 65 b-f] For more details, please refer to Climate change chapter

- Environmental Management standard

[MDR-P-65a] Our Environmental Management standard aims to minimize environmental impacts from air emissions, and spill management across OMV Petrom operations. Air emissions, both from point sources and fugitive emissions, are systematically monitored or estimated, controlled, and minimized to mitigate potential human health effects and harm to the environment, following the precautionary principle and adhering to international best industry practices and/or Best Available Techniques (BAT). New developments, upgrades, or major changes in existing operations incorporate emissions reduction considerations at all decision-making phases through value improvement practices and engineering. Furthermore, we monitor and control air emissions using best practices. Spill prevention and control measures include hazard identification, risk assessment, and emergency response plans, with any spills managed, cleaned, and reported internally

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

- HSSE Risk Management Standard

[MDR-P-65a] The HSSE Risk Management Standard sets the framework for identifying, assessing, controlling, documenting, and communicating HSSE risks, which includes risks related to the environment. Under this framework, risks for various environmental aspects are identified, including risks to air and soil. The standard also sets out minimum requirements for managing the environmental risks. It allows OMV Petrom to seize opportunities while prioritizing the protection of the environment.

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

- Incident, Emergency, Crisis and Business Continuity Management (Resilience)

[MDR-P-65a, E2-1.15c] The Incident, Emergency, Crisis, and Business Continuity Management (Resilience) Policy provides a structured framework for a rapid and coordinated response to incidents, emergencies, and crises. The policy prioritizes life protection, environmental preservation, asset security, and minimization of business interruptions. Each site has established incident response and management teams to handle emergencies, coordinate responses, and support local authorities.

[MDR-P 65b] The policy applies to OMV Petrom group and all its fully consolidated subsidiaries.

[MDR-P 65e] This standard applies to OMV Petrom's response arrangements for incidents, emergencies, and crises involving people, information, assets, or reputation, ensuring continuity where OMV Petrom holds legal, ethical, community, or business responsibilities.

[MDR P 65c] The Executive Board is accountable for implementing this policy, whereas clear responsibilities are laid down on functional level.

- Management of Change standard

[MDR-65P-a-c, e, f] The Management of Change standard ensures that any modifications to processes, systems, designs or organizational structures are carefully evaluated for potential new hazards or increased risks. Each change undergoes a structured assessment to establish risk controls and requires approval prior to implementation. This policy applies to all changes within OMV Petrom Group that could impact health and safety, the environment, quality, financial and asset integrity, reputation, or compliance, extending to contractors and leased personnel working on OMV's behalf. Accountability for the policy's implementation rests with the Executive Board. All internal regulations undergo an internal consultation process prior to their approvals/release. The policy is published on our internal regulations platform and is available to all stakeholders involved in the Management of Change process, including employees, suppliers, and contractors, who are kept informed of relevant changes and their progress via the OMV Group Management System, applicable to OMV Petrom Group as well.

[E2-2] **Actions**

[E2-2.18a, MDR-A 68-a-d] To prevent and, wherever applicable, mitigate the negative impacts and risks identified for the material topic E2 Pollution, such as the negative impact associated with non-GHG emissions, originating from our own operations, as well as soil pollution resulting from spills, OMV Petrom has defined key actions to address negative impacts regarding pollution.

[MDR-A 69b,c]

Key action	**Status**	**Expected outcome**	**Contribution to policy**	**Scope**	**Time horizon**	**CAPEX 2024** (mn RON)	**CAPEX 2025-2030** (mn RON)	**Related IRO**
Pollution prevention	Actual & Planned	Reducing pollutants into air and soil	Pollution prevention and minimization of environmental impacts	OO	Mid-term	150.3	172.5	Pollution of air - negative impact on air quality, consequently affecting environment, ecosystems and humans

[MDR-A.69 b] The CAPEX required to implement the actions taken in 2024 as shown in the table above is included in the Group total CAPEX; for the Group's total CAPEX and its reconciliation to the investments shown in the cash flow

statement, refer to Director's Report chapter, section "Capital Expenditure (CAPEX)" and the Consolidated Financial Statements, Consolidated statement of cash flows".

Actions presented in the table are defined as those requiring CAPEX of EUR > 5 mn for their implementation. CAPEX includes additions to property, plant and equipment and to intangible assets (including IFRS 16 right-of-use assets) and expenditures for acquisitions as well as equity-accounted investments and other interest for pre-defined Sustainability CAPEX categories. Decommissioning assets, government grants and other additions that by definition are not considered capital expenditure are not included in gross CAPEX figures. Within the boundaries of applicable accounting standards, expenditure incurred during project implementation is generally capitalized, thus included in the CAPEX figures. Figures are not validated by external bodies

In addition, OMV Petrom implements continuous measures that contribute to the mitigation of negative impacts regarding pollution.Such measures are:

Risk Management

[E2-2.18a] The risk management framework of OMV Petrom is aligned to the OMV Group framework, which manages safety and environmental risks to protect people, the environment, and company assets while ensuring business integrity. Pollution risks are central to our corporate and HSSE framework. We address asset integrity risks that could lead to pollution through our Integrated Risk Register (IGRR). Our asset integrity programs focus on identifying and managing risks of pollution, including crude oil spills. When a pollution risk is identified, we implement response measures in line with Group standards and local legal requirements. Such measures are:

Monitoring

[E2-2.18a] We monitor emissions of pollutants in compliance with European and national regulations. If emissions exceed legal or permit limits, we take corrective measures.

Prevention and Treatment

[E2-2.18a, MDR-A68-a-c,e] The LDAR (Leak Detection and Repair) program focuses on reducing air pollution by minimizing losses of containment and the associated air emissions. The program aims to prevent and control air pollution through proactive measures to detect and address leaks.This initiative contributes to environmental policy objectives by ensuring the prevention and control of air pollution and supporting sustainable operations

[MDR-A68-a-c,e)] Tanks modernization Program in Refinery Program targets reducing volatile organic compound (VOC) emissions to the air by upgrading tank systems to align with modern standards. This initiative supports environmental policy objectives by preventing pollution, minimizing environmental impacts, and ensuring the efficient use of assets

[MDR-A68-a-c,e)] Pipeline integrity program focuses on technical improvements for the integrity of onshore conventional oil and gas production, aiming to prevent the loss of containment and establish barriers against pollution. This program addresses risks to soil, air, and potentially water by implementing specific projects, such as risk studies, corrosion management plans, pipeline and equipment replacements, capital repairs, reconstructions, and technological flow improvements. It contributes to environmental policy objectives by preventing pollution, minimizing environmental impacts, and transitioning toward safer and less polluting operational practices. Additional benefits include emissions reduction and improved flow measurements.

[MDR-A68-a-c,d] Surface facilities optimizations program focuses on technical upgrades and optimizations of facilities for onshore conventional oil and gas production to prevent loss of containment and create a more efficient operating regime. These improvements ensure barriers against pollution by controlling, reducing, or enhancing/replacing equipment to prevent pollution, particularly to air and soil, while also lowering utilities and resource consumption. The initiative supports environmental policy objectives by preventing pollution and minimizing environmental impacts. The program is set to commence in 2025.

Metrics and targets

[DR E2-3] **Targets related to pollution**

[ESRS 2 MDR-T.81] Pollution is primarily addressed in our HSSE Policy under our commitment to protect the environment by implementing our vision "Committed to Zero Harm – Protect People, Environment and Assets", with specific focus on the area of minimizing our impact on the environment by minimizing environmental factors pollution.

In this sense, as we have not set specific targets for pollution, we track the effectiveness in this focus area by monitoring our performance using industry specific metrics for pollution monitoring, as required by legislation and described below in the metrics section.

We evaluate our progress on an yearly basis, by assessing the evolution of these metrics and analyzing any abnormalities in the values recorded. This practice enables us to track the effectiveness of our actions for minimizing our environmental impact and to develop new actions where the need arises. While minimization of our environmental impact is a complex and multifactorial topic, it is directly impacted and supported by other actions developed to reach the specific targets our organization has set up on the topics of process safety, energy and GHG emissions reductions.

[DR E2-4] **Metrics related to pollution of air and soil**

[E2-4.26, E2-4.AR 22] The main air pollutants emitted during OMV Petrom's operations are sulfur oxides (SOx), nitrogen oxides (NOx), particulate matter (PM), non-methane volatile organic compounds (NM-VOC), and heavy metals. These emissions arise from activities such as flaring, venting, fuel combustion, transportation, evaporation losses, fugitive emissions from tanks, equipment leaks, and process safety incidents. For the pollutants to air listed in the table below, OMV Petrom employs the pollutant definitions as prescribed in the European Pollutant Release and Transfer Register (EPRTR[xxxi]) regulation. The quantities of pollutants emitted into the air are expressed as cumulative annual values, and the unit of measurement is the kilogram.

[E2-4.28a, ESRS 2 MDR-M.75]

Pollutants emitted to air (kg/year)[1]

Pollutant	2024	2023
Non-methane volatile organic compounds (NMVOC)	1,120,000	Not reported
Nitrogen oxides (NOx/NO)	1,525,156	Not reported
Dust (PM10)	59,000	Not reported
Sulfur oxides (SOx/SO)	632,000	Not reported
Nickel and compounds (as Ni)	103	Not reported
Cadmium and compounds (as Cd)	20	Not reported
Benzene	0	Not reported

[1]In its 2023 Sustainability Report, OMV Petrom has reported the following non-GHG air emissions: (SOx), nitrogen oxides (NOx), particulate matter (PM), non-methane volatile organic compounds (NM-VOC); for the reporting year 2024, a different methodology based on EPRTR is employed and therefore 2023 data was not comparable anymore.

[ESRS 2 MDR-M.77 a, c] Data for air pollutants are derived using data calculated using activity data and standard factors from industry specific regulations on emissions. Assumptions and limitations are related to the use of standard factors.

[ESRS 2 MDR-M.77 b] The measurement of metrics is not validated by an external body.

[E2-4.30 b] The pollution data is obtained from site-specific information and measurements in accordance with national requirements. Data for air pollutants are derived using data calculated using activity data and standard factors from industry specific regulations on emissions.

c) Pollution-related data is gathered in the company's reporting system on a continuous basis or via dedicated data collection campaigns. At local reporting entity level, the 4-eyes-principle is applied, i.e. a different person from the one who entered the data checks the plausibility, then validates and approves the data.This is a precondition for data being used and further consolidated, at divisional or group level. Local management has the ownership over the local data.

[xxxi] EPRTR Regulation (EC) No 166/2006 of the European Parliament and of the Council concerning the establishment of a European Pollutant Release and Transfer Register.

Spills

	M.U.	2024	2023
Spills occurred[2]	Number	2,194	2,161
of which major (i.e., severity levels 3 to 5)	Number	3	1
Spills volume released	th l	109	161

[2]For 2023 spills data, a minor review has been done during reporting year 2024, for 1 spill only and the respective volume

[ESRS 2 MDR-M.77 (a-c)] Spills occurred: Total Number of hydrocarbon Spills refers to the total number of spills registered and documented in the reporting system within reporting boundaries for the reporting year.

Of which major (i.e., severity levels 3 to 5): OMV Petrom incident classification system consists of five severity levels, with severity increasing from level 1 to level 5. A level 3 incident is defined as Medium environmental damage within a large area outside the boundaries for which actions for remediation / restoration are required

Spills volume released: Spills related data is gathered in the company's reporting system on a continuous basis. The measurement unit for the volume released is the liter. Depending on the type and severity of spill and data availability, there are different methods employed to determine the spill volume. For larger volumes of spilled material, process data are used to determine the spill volume (e.g. tank volumes and levels, flow-measurements and alike). For smaller volumes of spilled material, the volume of excavated soil and the specific hydrocarbon loading of the soil is used. For very small volumes of spilled material, that don't require soil recovery, estimates will be employed.

[ESRS 2 MDR-M 77b] The measurement of the metric is not validated by an external body.

Water

Water is an integral part of our operations. Freshwater is withdrawn from all types of sources (groundwater, surface water and public network) and is used in all business segments (E&P, R&M, G&P), mainly for technological processes including: cooling, steam generation, drilling and injection (specific for E&P). Therefore, water is utilised in the entire flow, from drilling to final products distribution and electricity production.

All resulted water effluents are subject to treatment prior discharge into public sewage or surface water bodies.

Produced water is a process by-product generated from oil and gas extraction process and is managed by injection (>94% reinjection in hydrocarbon reservoirs) or treated and discharged (<6%).

As such, the impact of OMV Petrom, across its operations, including E&P, R&M, and G&P, consists in withdrawal and consumption of high volumes of freshwater, with the potential to impact both communities and other local businesses in terms of water resources.

Sub-topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Water	Impact on water resources due to high volumes of freshwater extracted that can negatively impact the availability of water resources for other uses	Act	Negative impact	OO	▶ Code of Conduct ▶ Human Rights Policy Statement ▶ HSSE Policy ▶ Environmental Management Standard

Impact, risk and opportunity management

[DR E3-1] **Policies**

[E3-1.11] OMV Petrom has the following policies in place to manage its material impact related to water:

▶ Code of Conduct

[MDR-P 65-a] [E3-1.AR 17, e, E3-1-12 a.i., E3-1-12.c] According to the Code of Conduct, we are reducing the water intensity of our operations. In 2024, we updated the Code of Conduct to extend our commitment regarding water use. We respect water as a precious limited resource and focus on its sustainable and efficient use. We respect the right to water of our stakeholders, especially local communities, and minimize the impact of water use (for instance by reducing freshwater withdrawals, especially in water-scarce areas) and discharge (for instance by improving (waste) water quality).

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

▶ Human Rights Policy

[MDR-P 65-a]The Human Rights Policy emphasizes our commitment to sustainability by minimizing environmental impacts through prevention of water and soil pollution, reduction of emissions, efficient use of natural resources, and protection of biodiversity, contributing to a sustainable world.

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

▶ OMV Petrom Group HSSE Policy

[MDR-P 65-a] Through the OMV Petrom Group HSSE Policy, which is an Annex of the HSSE Directive, we commit to minimize environmental impacts by reducing pollution, lowering greenhouse gas emissions, efficiently using water

and natural resources, protecting biodiversity, and rehabilitating sites after closure.

[MDR_P 65 b-f] For more details, please refer to Climate change chapter.

▶ Environmental Management standard

[MDR-P 65-a, E3-1-12a.i] This regulation further defines the minimum requirements for environmental management in OMV Petrom Group, establishing the environmental risk assessment, minimum environmental performance requirements for water management and discharges. It mandates that all OMV Petrom activities use water efficiently and minimize impacts on the environment and local communities. Pollution prevention and impact minimization at the source are central to our water management approach.

All operational sites assess water-related risks and opportunities at a river-basin scale, maintain a detailed water balance account and develop management plans to address identified material risks. All operational sites have to create, implement, and maintain a water management plan that includes scope and objectives, applicable legislation, water sources and discharges, water mapping and balance, transport and treatment systems, significant risks and mitigation measures and water conservation and efficiency measures. Direct discharge of untreated wastewater onto land, wetlands, or other water bodies is prohibited, and no discharge may alter or reduce the value of the receiving environment. Discharge quality is managed to meet legal permit limits and mitigate potential impacts on the environment and local communities. Systematic monitoring ensures compliance and appropriate management of environmental impacts.

[E3-1-12.a.ii, E3-1-12.a.iii] Environmental Management Standard requires environmental impact assessments (EIAs) for all projects to avoid, mitigate, and manage potential impacts on water. These assessments address environmental risks, focusing on preserving water quality and preventing water stress, with internal processes ensuring compliance and asset adherence to legal requirements.

[E3-1.12.b, E3-1-12.c] OMV Petrom integrates water management into HSSE policies across the business lifecycle, including projects, procurement, and contracts. Environmental impacts, including those related to water, are assessed in each project through Environmental Risk and Impact studies. Standards for Supplier Performance and Contractor Management further reinforce water and environmental sustainability across the supply chain and contract lifecycle.

[E3-1.14] OMV Petrom has not adopted any specific policies or practices related to sustainable oceans and seas.

[DR E3-2] **Actions**

[E3-2.17] In recent years, we have implemented several Best Available Technology (BAT) measures to minimize freshwater withdrawal and sustainably treat water. These include reducing operational complexity, increasing water recirculation (e.g., at Brazi power plant), using desalinated seawater instead of freshwater (e.g., Petromar), installing recirculating cooling systems, and using alternative cooling agents (air or glycol) instead of water, upgrade and continuous maintenance of equipment to reduce water loss and optimization of pipeline routes for water supply.

In 2024, in the Exploration & Production segment, we have continued our technical improvements for integrity and optimizations of our facilities including water systems thus preventing losses and generating more efficient operating regime. This systematic approach will be continued in the future as part of our actions to address efficient water management.

Various projects and measures contribute to reduce the use and supply of water in our operations. In 2024, specific projects were conducted and finalized:

[MDR-A 68-a, b, c] Modernization of technological water system in Asset Muntenia to ensure proper supply with freshwater.

[MDR-A 68-a, b, c] Rehabilitation of Compressors Station Bustuchin in Asset Oltenia, by replacing of existing cooling tower system with a modular new equipment having high efficiency

[MDR-A 68-a, b, c] Retrofit of cooling system at CHP unit Oprisenesti in Asset Moldova

Additionally, in line also with the requirements of the environmental policies, water management plans which include all our sites are prepared and updated on annual basis, aiming at improving the water use efficiency.

[ESRS 2 MDR-A 69] No significant CAPEX was required for the implementation of the actions related to water. Consequently, this topic is not reflected in the financial statement.

[E3-2.19] Overall water stress assessments are conducted periodically. In order to identify operations in areas affected by water scarcity and water stress, OMV Petrom uses international tools and indexes such as the Verisk Maplecroft's "Water Stress Index", as well as its own assessments as required. So far, no high water stress areas were identified for OMV Petrom operations.

Metrics and targets

[DR E3-3] **Targets related to water**

[ESRS 2-72] We have been monitoring our ambition established in our Code of Conduct, to reduce the freshwater use, through dedicated metric freshwater intensity. In order to set up relevant water-related targets, we are planning to expand our water risk analysis in order to have a solid analysis as a base for development.

[ESRS 2.81] While specific targets for water were not set, OMV Petrom ambition is to efficiently reduce freshwater withdrawal and enhance the quality of wastewater in traditional businesses.

We are committed to treat water as a valuable, limited resource and to use it sustainably and efficiently. We respect the right to water of our stakeholders, especially local communities, and strive to reduce the impact of our water use and discharge. To measure our progress, we track the year-on-year reduction in freshwater withdrawal within our operations, as well as internally assess our overall freshwater intensity against industry benchmarks (eg. IOGP, Refinery BREF, etc).

[DR E3-4] **Water consumption**

[E3-4.28a, c, AR 32] We use the following metrics to monitor our performance & effectiveness in relation to our material impact related to water consumption:

Water Data (c.m.)

	2024	2023
Water Withdrawn	49,275,294	50,027,881
thereof groundwater	4,685,309	3,303,823
thereof surface water	10,198,740	10,285,529
thereof from public supply systems	904,894	919,422
thereof seawater	9,391	8,216
thereof produced water	33,476,960	35,510,891
Water recycled and reused	307,954,451	248,268,528
Water discharged	8,027,398	8,184,445
Water consumption	41,247,896	41,843,436

Water withdrawn (cubic meters) is the sum of all water drawn into boundaries of the undertaking from all sources for any use over the course of reporting period, encompassing the following sources: surface water, groundwater, seawater, public supply systems and produced water resulted from hydrocarbon extraction process.

Water recycled and reused (cubic meters) is calculated based on the total volume of water recirculated in installations (eg. cooling systems); recirculated water is calculated from pump operating hours (hours/year) x pump flow rate (cubic meters /hour) = cubic meters /year volumes of water recirculated (cubic meters)

Water discharged (cubic meters) is the sum of effluents and other water leaving the boundaries of the organization and released to: surface water or to third parties over the course of reporting period, measured and calculated.

[MDR-M 77a] Water consumption (cubic meters) is defined as the amount of water drawn within boundaries of undertaking and not discharged back to the water environment or to a third party over the course of reporting period.Total water consumption is calculated as the difference between total water withdrawn and total water discharged.

[MDR-M 77b, E3-4.28e]]. Metering devices used to measure water flows have EEC label, which is an indicator of external validation. However, the data reading and collection process for offline meters is managed internally and does not involve an independent body.

[E3-4.29]

Water intensity (c.m/mn EUR)

	2024	2023
Water intensity	5,737	-

[MDR-M.77a, b] Water intensity is calculated as total water consumption in operations in cubic meters per million EUR net revenue. Total water consumption includes produced water.

Water intensity = Total water consumption (cubic meters) / Net revenue (million EUR).

The Net revenue used to calculate the water intensity is disclosed in the consolidated financial statements, note 19 “Sales revenues”, line “Total sales revenues”, using the average EUR FX rate from Note 6.

Biodiversity and ecosystems

We acknowledge that some of our operations are located within one-kilometer buffer to Natural Protected Areas (NPAs) and can have impacts on biodiversity. The specific impacts of our industry include habitat loss and alteration through land use for exploration, production, disposal of drilling wastes and associated by-products, and decommissioning of onshore/ offshore wells. In the long term, oil and gas industry specific activities can lead to indirect and cumulative impacts on biodiversity meaning limitations in the availability, accessibility, or quality of natural resources, and this, in turn, may adversely impact the well-being and livelihoods of local communities.

Sub-topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Direct impact drivers of biodiversity loss	Negative impacts by losing habitat and alteration through land use for exploration, production, disposal of drilling wastes and associated by-products, and decommissioning of onshore/ and offshore oil wells.	Pot.	Negative impact	OO	▶ Code of Conduct ▶ Environmental Management Standard

Strategy

[DR E4-1] **Transition plan and consideration of biodiversity and ecosystems in strategy and business model**

[E4-1.11] We are aware that our operations have the potential to generate impacts on biodiversity.

Our approach to biodiversity management is in line with our HSSE Strategy 2030, launched in the last quarter of 2023. The strategy sets a goal to protect people and nature and respect the planetary boundaries. In this direction, the specific biodiversity aim is for net positive impact in new operated projects in sensitive areas. We also commit to restore the used land and bring it back to its original condition at the end of our operations, as outlined in our HSSE Policy and in accordance with have the legal obligations.

[E4-1.13a-f] An understanding of our biodiversity impacts, dependencies, risks, and opportunities, as expected to be revealed through our TNFD (Taskforce for Nature Financial Disclosure) LEAP (Locate, Evaluate, Assess, Prepare) assessment, is essential to inform a resilience analysis of our business model and strategy. As the assessment is still in progress, a resilience analysis has not been performed.

[DR SBM 3] **Material impacts, risks and opportunities and their interaction with strategy and business model**

[4-SBM 3.16] A geospatial analysis revealed that several OMV Petrom sites are located within or near biodiversity areas. For a clear materiality of specific locations, recently we have started a comprehensive evaluation and assessment over the operational activities, following a LEAP assessment guided by TNFD and considering local and national public acknowledgement of the state of nature for each regional area. In order to define a list of potential material sites, we have to finalize the assessment.

[E4-SBM 3.16a i] OMV Petrom recognizes that its operations, particularly those carried out in locations near NPAs (National Protected Areas), as revealed by the geospatial analysis, have the potential to generate impacts on biodiversity. Our operations which could trigger biodiversity related impacts and risks are falling under the major streams in the oil & gas industry. These refer mainly to operations such as exploration activities, including geophysical methods, drilling new wells, oil & gas extraction

and primary treatment of oil, through decommissioning of production infrastructure and sites remediation. Impacts are indirect and cumulative and can include habitat loss or fragmentation and alteration through land use for exploration, production, disposing of drilling and associated wastes, also collaterally coming from pollution of air, soil (degradation).

[E4-SBM 3.16a.ii] Based on the TNFD LEAP assessment initiated in the last quarter of 2023, we will be able to determine site-level impacts and dependencies, by also considering the ecological status of these sites. After working with three pilot sites in the first phase of the project, we plan to continue the roll-out of this assessment to all relevant operational sites (excluding filling stations).

[E4-SBM 3.16a.iii] We operate inside various types of NPAs such as National Protected Areas, Natura 2000 and Key Biodiversity Areas (KBA). The Evaluate and Assess steps of the LEAP assessment need to be completed for all sites in Romania to be able to provide a list of material sites that impact biodiversity sensitive areas. As the process of completing the evaluation is still ongoing, we can provide only an estimated surface of sites in or near biodiversity-sensitive areas, regardless of the potential impact on these areas. For more details, refer to E4-5 section in this chapter.

[E4-SBM 3.16b] As result of the TNFD LEAP assessment project, a complete list of material sites which could be associated with negative impacts with regards to land degradation, desertification or soil sealing will be available. For the existing sites assessed so far, we have not identified material negative impacts with regards to land degradation, desertification or soil sealing.

[E4-SBM 3.16c] We currently have not identified any impact of our operations that would affect threatened species, based on the TNFD LEAP assessment performed so far.

Impact, risk and opportunity management

[DR E4-2] **Policies related to biodiversity and ecosystems**

[E4-2.22, MDRP-A] Potential impacts on biodiversity are managed according to the policies below:

▶ Code of Conduct

[MDR-P 65a] At OMV Petrom Group, we are committed to ensuring sustainable and responsible behaviour towards the environment, and society, recognizing the significant impact of our operations and value chain. We are dedicated to conducting our business responsibly, with respect for the environment and a focus on adding value to the communities where we operate. Guided by high ethical standards, we apply these principles in all aspects of our operations and expect the same from our collaborators.

In December 2024, we updated our Code of Conduct to underpin our commitment to preserving and restoring biodiversity and land and marine ecosystems in alignment with the post-2020 Global Biodiversity Framework (GBF). We apply the mitigation hierarchy, with priority given to avoidance and minimization over restoration and offsetting

[MDR_P 65 b-f] For more details, refer to the Climate change chapter.

▶ Environmental Management Standard

[MDR-P 65a] The standard outlines the criteria for an environmental management system (EMS), emphasizing compliance with environmental laws, minimizing environmental impacts, and using best practices and technology. In terms of biodiversity, the standard mandates all OMV Petrom Group businesses and activities to minimize disturbance and impacts on local plant and wildlife communities. Biodiversity and ecosystem services (BES) screenings are to be carried out within the EMS framework to identify potential threats to species, ecosystems, and legally protected or internationally recognized areas. If significant biodiversity impacts are observed or predicted, a biodiversity action plan should be incorporated into the Environmental Management Plan. This plan should cover the social, regulatory, and ecosystem context, partnerships with external stakeholders, biodiversity baseline survey and impact assessment, and mitigation and biodiversity conservation measures and monitoring. The standard also includes a hierarchy for biodiversity protection: avoid, minimize, restore, and offset impacts.

[MDR_P 65 b-f] For more details, refer to the Climate change chapter.

[E4-2.23a, AR 4a, i-v] The Environmental Management Standard regulates the necessity to minimize disturbance and impacts on local wildlife communities, which could involve re-routing pipelines and re-sitting fixed facilities to avoid impacts, and erosion control to minimize impacts. This

is especially relevant for impacts related to land-use change, pollution, or direct exploitation, even if these direct impact drivers are not explicitly mentioned in the standard. Impacts relating to invasive alien species are not specifically covered by the standard. BES must be considered in the managed activities, either new entries with specific evaluations or in operations cycle through compliance to environmental permits. Water management plans are in place to optimize the use of water resources, according to the Environmental Management Standard. Environmental Risk Assessments are a recurrent revision task, according to the same Standard. Emergency Response plans are in place according to the Water Management permitting framework as well as according to Incident, Emergency, Crisis and Business Continuity Management (Resilience) Standard.

[E4-2.23a AR 4b-d] Potential impacts on the state of species, the extent and condition of ecosystems including through land degradation, desertification and dependencies on ecosystem services have not resulted as material. However, the EMS requires BES screenings to identify the potential presence of nationally or globally threatened species and to describe and analyze observed or predicted impacts on biodiversity within the environmental impact assessment.

The EMS also includes, as part of the hierarchy for biodiversity protection, measures to minimize physical footprints and control erosion, restore sites through rehabilitation, and offset residual impacts through biodiversity compensations. This addresses the extent and condition of ecosystems, including land degradation and desertification. Additionally, it requires the description and analysis of impacts on ecosystem services within the environmental impact assessment and incorporates biodiversity action planning into the Environmental Management Plan, which includes mitigation and conservation measures to protect ecosystem services.

[E4-2.23b] According to the EMS, when significant impacts have been observed or predicted, defined as recognizing effects that severely affect entire habitats or significant portions thereof, impairing their viability or function, the mitigation hierarchy is followed, and action planning prioritizes the avoidance and minimization of impacts rather than restoration and offsetting.

[E4-2.23c] Our EMS requires the assessment of environmental impacts and risks, as well as adherence to environmental performance requirements concerning energy use, emissions into the atmosphere, water use and discharge, raw materials usage, waste management, hazardous substance handling, and biodiversity and ecosystem protection. However, dependencies and the physical and transition risks and opportunities on biodiversity and ecosystems services are not reflected specifically in our policies.

[E4-2.23d] According to the updated Code of Conduct, OMV Petrom Group cooperates with business partners to ensure that the impacts of our value chain do not compromise this commitment to preserving and restoring biodiversity and land and marine ecosystems in alignment with the post-2020 GBF. This commitment is reinforced by adherence to contractual conditions that reference all specific HSSE documents. Contracts are considered binding only through the enforcement of HSSE regulations, which ensures that all parties are held accountable for upholding these standards.

[E4-2.23e] In our business operations, we do not produce, source, or consume materials from ecosystems. However, as we further develop our low carbon business and engage in activities that require managing ecosystems, OMV Petrom is committed to reducing its environmental footprint and supporting a sustainable energy future while maintaining or enhancing biodiversity through regular monitoring and reporting as per legal requirements.

[E4-2.23f] Prior to new operational activities or new country entries, environmental risk assessments are performed. This includes evaluations of local legislation and the potential impact of our activities on sensitive and protected areas, as well as the effects on endangered species. When required by the permitting process, Environmental and Social Impact Assessments (ESIAs) for new developments are submitted to the local regulator or lender (whichever is applicable) for review, public disclosure, and approval. An Environmental and Social Management Plan is prepared to include preventive and mitigation measures as well as the monitoring program. Monitoring is carried out during the operational phase in accordance with the requirements set forth in the ESM Plan or as mandated by the authorities, which are integral to the authorization permits.

[E4-2.24a-d] OMV Petrom has not yet adopted a biodiversity and ecosystem protection policy covering operational sites owned, leased, or managed in or near biodiversity sensitive areas. However, our EMS and Code of Conduct apply to all our operational sites, regardless of their proximity to biodiversity sensitive areas. Policies explicitly covering sustainable land or sustainable seas practices, or that addresses deforestation have not been developed. Based on the results of the LEAP assessment on our sites, we will assess whether and how to incorporate this detailed information into our policies.

[DR E4-3] **Actions**

[E4-3.25, ESRS 2 MDR-A 68] Our Environmental Management Standard defines measures to manage the negative impact on biodiversity and ecosystems from various impact drivers, such as GHG emissions, land use change, water and resource use, pollutant release, and disturbances. Key measures include site-level assessments and biodiversity action plans. These measures represent the starting point for future improvements and upgrades

- Evaluation and Assessment of Biodiversity aspects following TNFD guidance

[MDR-A68 a, b, c, e] The effectiveness of our biodiversity policies and actions is tracked through the progress of our LEAP assessment, which currently entails the evaluation and assessment of pilot locations within OMV Petrom as per LEAP approach guided by TNFD. This assessment supports our ambition of preserving and restoring biodiversity and land and marine ecosystems.

LEAP is used to identify and assess nature-related issues through four distinct phases.

In the Locate step, the OMV Petrom sites are subjected to geospatial analysis to prioritize sites based on ecosystem integrity and biodiversity importance. Various biodiversity data layers provided by IBAT (layers on protected areas, key biodiversity area and IUCN red listed species), as well as freely available layers (ESRI Land cover), mean species abundance and water stress, are applied. The results of the Locate phase were also used to select three pilot sites across Romania.

In the Evaluate step, a corporate impact and dependency register was built by matching OMV Petrom's activities with data from the ENCORE tool and TNFD sector guidance. This corporate register is used as a starting point for the site level assessment for the pilot sites where the impact drivers are correlated with nature impacts on species, habitats, and ecosystems. To rate the site level impacts, the magnitude of effect for nature impacts and receptor sensitivity need to be scored. In a similar way dependencies are evaluated.

The results of the Evaluate phase are then used as an input for the Assess phase, where risks and opportunities are analyzed. In 2024, the three pilot sites in E&P underwent an evaluation and assessment approach to identify the biodiversity materiality degree and to appreciate the level of potential risks for further deeper understanding on how all activities could trigger biodiversity loss. These pilot evaluations are essential to create an accurate view of the impact and establish a baseline for biodiversity management planning, which will be further refined.

In the Prepare phase, we will focus on getting ready for disclosure and conducting preparatory work related to metrics and targets, an updated biodiversity policy and a roadmap for further roll out.

- Our EMS provides measures for BES screenings, which are expected to guide us is developing Biodiversity Action Plans (BAPs) for the actual operations and projects with significant impacts or risks.

[E4-3.28b] The mitigation hierarchy is a key principle in the development of biodiversity action plans and is also set out in our Environmental Management Standard. Biodiversity offsets represent the last stage of the mitigation hierarchy for biodiversity related impacts and shall only be used when all other options do not achieve the desired results. In 2024, OMV Petrom did not make use of biodiversity offsets

[E4-3.28c] Since the LEAP assessment was still in progress, action plans have not yet been defined. During the definition phase, relevant local knowledge, as well as potential nature-based solutions, will be explored and assessed

Metrics and targets

[DR E4-4] **Targets related to biodiversity and ecosystems**

[ESRS 2 MDR-T.72, MDR-T.81b] In the updated Code of Conduct, OMV Petrom has included an ambition to preserving and restoring biodiversity and land and marine ecosystems in alignment with the post-2020 Global Biodiversity Framework (GBF), prioritizing avoidance and minimization over restoration and offsetting through the mitigation hierarchy. A more systematic approach based on international frameworks, such as TNFD, is necessary in order to set up relevant targets. In this sense, our LEAP assessment (please see section Actions) will form the foundation for developing ESRS-aligned targets, which, at the moment of publishing the Sustainability Statement, were not defined. Currently, the effectiveness of biodiversity policies and actions is tracked through regular monitoring of sites overlapping with biodiversity sensitive areas and the progress of the LEAP assessment.

[DR E4-5] **Impact metrics related to biodiversity and ecosystems change**

As part of our LEAP assessment, we have begun to evaluate the biodiversity and ecosystems impacts and dependencies of these sites on sensitive areas. However, a

comprehensive understanding of the materiality of impacts and dependencies at the site level is not yet available. Therefore, the following table does not report on the area of material sites in or near biodiversity-sensitive areas but provides an overview of the OMV Petrom sites near biodiversity-sensitive areas, regardless of the impact on the area. The metrics below are disclosed voluntarily as they contribute to our overall ambition of preserving and restoring biodiversity and ecosystems.

Sites located in or near biodiversity-sensitive areas in aggregated form

Location	Types of biodiversity sensitive areas	Area of sites in or near biodiversity-sensitive areas (ha)
RO	CDDA (Common Database on Designated Areas), KBA (Key Biodiversity Areas), Natura 2000	246

[ESRS 2 MDR-M.75-77] We updated our disclosures from the previous reporting period to align with the requirements of the ESRS, including the incorporation of key biodiversity areas, which were not previously addressed. The area of sites located in or near biodiversity-sensitive areas in aggregated form is defined as the total area of OMV Petrom, the sites (in hectars) that are located within 1 km distance biodiversity sensitive areas. The metric is calculated using geospatial analysis. Based on GIS coordinates of our operational assets, open-source data sets were accessed and overlapped to obtain relevant information related to natural protected areas and key biodiversity areas. A categorization of sensitive areas was obtained looking at operational locations clustered into groups based on region for E&P business.

The metric does not account for the area of overlap between OMV Petrom sites and the sensitive areas enlarged by the 1 km buffer zone. In contrast, if any part of the site falls within the 1 km buffer zone, the entire site is considered. A granular analysis based on individual wells and facilities was performed. Since all wells and many facilities are entered as data point (i.e. without area), in our GIS system, proxy polygons with average areas had to be created and used in the geospatial analysis. For wells, an average proxy area of 900 m2 and for facilities an average area of 5000 m2 was used in the analysis.

Filling stations and pipelines are excluded from the analysis, and the same approach was considered for “administrative” facilities (e.g. office buildings outside of industrial sites facilities) which do not impact on biodiversity and ecosystems.

Assumptions and limitations on this metric are mainly related to the use of proxy area for OMV Petrom facilities and wells in the E&P Division. The metric is not species or ecosystem and does not integrate ecological threshold. Primary data (OMV Petrom operations) and public available data on biodiversity sensitive areas is used in calculating the metric. The used datasets are subject to accuracy degree depending on their last year of update and it was not verified externally by a specialized professional organization. During evaluations of pilot sites, the need emerged to check the status of sensitive areas at local authorities, in order to fine tune the results and improve the accuracy of intersected operational sites / clusters with the areas identified and managed by governmental bodies.

Process safety

Process Safety Management (PSM) remains a crucial focus for the company, given it is both a moral and a business imperative. We understand that a process safety incident might lead not just to the loss of life,but could also substantially impact business value.

PSM is characterized by the active detection, analysis, evaluation, and mitigation of hazardous substance releases and process incidents that could possibly ensue from failures in procedures, equipment, or process technology.

In summary, PSM is fundamental to our company's moral and business obligations. We recognize the negative impact of a potential major accident, and we are committed to mitigating the risks through effective prevention measures.

Topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Process Safety	Critical incidents related to the oil and gas sector include loss of control or containment of hydrocarbons, well blowout, explosions, fires, unplanned plant disruption and shutdown	Pot.	Negative impact	OO	▶ Major Accident Prevention Policy ▶ HSSE Risk Management Standard ▶ Process Safety Management Standard ▶ HSSE in Major Capital Projects Standard

Impact, risk and opportunity management

[MDR-P] **Policies**

[ESRS 2-MDR-P.65] The specific policies linked to Process Safety are as follows:

▶ Major Accident Prevention Policy

[MDR-P-a] This policy outlines OMV Petrom's overall aims and arrangements for controlling major accident risks in its operations, detailing how these objectives are achieved and the specific measures implemented across the organization. Central to this policy is OMV Petrom's commitment to cultivating a strong safety culture that ensures a high likelihood of safe, continuous operations.

[MDR-P b,c,d,e,f] For more details, please see the Climate change chapter.

▶ HSSE Risk Management Standard

[MDR-P-a] The HSSE Risk Management Standard establishes the framework and minimum requirements for managing HSSE risks at OMV Petrom. Effective HSSE risk management supports decision-making, is integral to handling changes (including temporary ones) and ensures that every decision considers risk. Managing HSSE risks enables OMV Petrom to pursue opportunities while prioritizing the protection of people, the environment, and assets to maintain business integrity. This standard's objectives include defining a process for identifying, assessing, controlling, documenting, and communicating HSSE risks.

[MDR-P b,c,d,e,f] For more details, please see the Climate change chapter.

▶ Process Safety Management Standard

[MDR-P a, b, c, f] The Process Safety Management (PSM) Standard provides a framework for implementing and

maintaining effective process safety regulations, supporting the development, execution, and review of detailed standards and procedures governing process safety activities and systems. PSM is embedded within the overall Group HSSE management, employing uniform instructions, practices, and specifications to achieve safe and reliable production. Key components include organizational structure, resources, management processes, personnel and equipment performance, safety culture, and documented regulations and practices. This standard applies to OMV Petrom SA and its fully consolidated subsidiaries. Senior Management, including Managing Directors, General Managers, or Affiliate Directors, holds accountability for implementing the standard. Standard requirements are communicated through internal channels like the internal regulations' platform, with training provided upon major revisions. Additionally, requirements are included in the tendering process during the pre-award phase as part of Minimum HSSE Requirements and reinforced through Bridging Documents during Contract Execution.

- HSSE in Major Capital Projects Standard

[MDR-P-a, b, c, f] This procedure specifies required HSSE, process safety and technical safety related deliverables/activities in the phases of project life cycle. The regulation covers both 'greenfield' and 'brownfield' major capital projects within OMV Petrom and all its fully consolidated subsidiaries. The project owner is accountable for the implementation of the procedure. We communicate the procedure requirements through internal channels, such as our internal regulations platform, including training whenever a major revision of the procedure appears and during the tendering process in pre-awarding phase as part of Minimum HSSE Requirements and through Bridging Document during the Contract Execution phase.

[MDR-A] **Actions and resources**

[ESRS 2-MDR-A.68] OMV Petrom has various actions in place to address material impacts related to Process Safety:

- Development of incident scenarios

Incident scenarios are developed and assessed for risks associated with the operational activity, in line with Enterprise Risk Management and HSSE Risk Management Standard. Mitigation measures are established and monitored. Information regarding major risks is kept in the group-wide risk database and all the others risks in the operational risk registers. This action applies to entity facilities/processes.

[MDR-A.68-a, b, c, d] Major risks and corresponding mitigation measures are documented, evaluated, and monitored in a Group-wide database called the Active Risk Management System (ARMS), which is updated biannually and involves senior management in reviewing top-priority risks. Risk registers are maintained in operational areas as required by the Risk Management Standard and are consistently updated at different organizational levels to keep risks controlled and reduce the likelihood and potential consequences of incidents. ARMS risks are revised twice a year, with local risk registers updated whenever working conditions change. Mitigation actions are closely tracked in both ARMS and local registers.

- Development and implementation of the Process Safety Roadmaps

[MDR-A68-a, b, c, d, e] The objective of this action is to define a clear sequence of activities Process Safety Information, Process Hazard Identification and Risk Assessment, and Risk Management Elements for enhancing safety across facilities. Actions taken include ensuring that all facilities have Roadmaps by the end of 2025 and completing all actions outlined in the Process Safety Roadmaps each year. Covering E&P and the Petrobrazi Refinery we monitor on quarterly basis the progress on roadmaps definition and actions implementation. In 2024, 65 roadmaps were developed and 467 actions were implemented.

- Improving quality of data in IGRR (Integrated Risk Register) by quarterly review

[MDR-A68-a, b, c, d, e] The Integrated Global Risk Register (IGRR) provides a semi-quantitative risk analysis, allowing for a Prioritization Score Assessment (PSA) of process safety actions, which assesses the risk reduction achieved by implementing each action relative to its effort. Applicable to E&P and the Petrobrazi Refinery, the IGRR is updated quarterly by local or site process safety leads. Regular reviews are conducted for the status and cost of critical actions, and the IGRR tracks items requiring temporary compensating measures. These quarterly updates include all High and Medium Risk actions arising from safety studies and audits.

- Process safety risks assessed, mitigation measures follow-up through different tools and programs

[MDR-A68-a, b, c, d] In line with ensuring asset integrity, OMV Petrom implements Pipeline Integrity Management and Inspection Programs, Corrosion Management Plans in E&P, and the Asset Integrity Data Assistant (AIDA) in R&M.

Covering E&P and the Petrobrazi Refinery, this initiative tracks key indicators such as the number of inspections performed under the pipeline integrity program, the number of corrosion management plans developed in 2024, and the number of inspections in the Refinery. This action is monitored and updated annually. In 2024, 47 Corrosion Management Plans for pipelines, facilities, and projects were developed, and 134 inspections were performed for pipeline integrity. In addition, for assessing process safety risks, the PHA (Process Hazard Analysis) program continues through development of HAZOP (Hazards and Operability) studies. In E&P, in 2024 we performed 64 HAZOP (HAZards and OPerability) studies.

- Knowledge and awareness related to process safety developed continuously

[MDR-A68-a, b, c, d] To enhance knowledge sharing, best practices and learning from events, OMV Petrom implements a series of actions across E&P and the Petrobrazi Refinery, including the distribution of Beacon alerts through dedicated channels (such as email, control room postings, and discussions in meetings), the participation of its specialists in OMV Group Process Safety Knowledge Exchange Sessions, and the allocation of Process Safety Computer-Based Training (CBT) modules to specific target groups. Key performance indicators include the number of Beacon alerts distributed, the number of Knowledge Exchange Sessions, and the percentage of planned personnel who completed training. In 2024, 12 Beacon alerts were distributed, process safety specialists participate in four Knowledge Exchange Sessions, and ~87 % of planned participants completed the dedicated training modules.

- PS incidents investigated and alerts and lessons learned developed and shared

[MDR-A68-a, b, c, d] To ensure incident prevention and continuous safety improvements, all Tier 1 and Tier 2 incidents within E&P and R&M are thoroughly investigated to determine direct, root, and systemic causes. Preventive and corrective actions are then implemented to minimize the likelihood of recurrence to as low as reasonably practicable (ALARP). Additionally, safety alerts and lessons learned are developed and distributed to prevent similar incidents based on these findings. These actions are maintained on a permanent basis, with metrics tracking the number of Tier 1 and Tier 2 incidents investigated, along with the number of alerts and lessons learned distributed.

- Safety studies developed early in the project lifecycle and verified during Project HSSE Reviews or Independent Gate Reviews processes.

[MDR-A68-a, b, c, d] Process hazard identification and risk assessments are conducted throughout all phases of a facility's lifecycle, including concept, design, construction, operation, and decommissioning. The concept of Inherently Safe Design is adopted and implemented as an initial step during the conceptual and design phases to enhance safety from the outset. This action applies to E&P, R&M, and G&P and aligns with each project's schedule. Key performance indicators include the number of safety studies completed in various projects. In 2024 we performed 59 studies.

Process safety incidents may result in loss of containment. As such, other actions to prevent and, wherever applicable, mitigate the negative impact identified for the material topic Process Safety, largely contribute to the prevention and mitigation of the company’s impacts and risks related to E2 Pollution, and viceversa. Please see Pollution chapter for more details. [ESRS 2 MDR-A.69].

Metrics and targets

[MDR-T] **Targets related to process safety**

Target	Progress 2024
Maintain leading position in Process Safety Event Rate	0.16

[MDR-T-a, b, c, e, f, h, j] The target is directly linked to OMV Petrom's HSSE policy, aligning with the ambition to become an industry leader in HSSE and guided by the vision “Committed to Zero Harm Protect People, Environment, and Assets”. The scope of the target covers OMV Petrom Group and its fully consolidated subsidiaries. The target is set as a relative measure, using 2017 as the baseline year and extending to 2030. The normalized rate of process safety events (PSER) is calculated jointly for Tier 1 and Tier 2 process safety events. Given the lack of a universally applicable normalization factor for process safety indicators based on facility configuration, worker exposure hours are used as a convenient and accessible factor, encompassing total hours worked by employees and contractors within the

reporting scope. E&P includes hours worked for operated assets, R&M includes all operations. Hours worked in Corporate Functions (e.g., General Management and Finance in Petrom) are excluded. Due to the typically low frequency of process safety events, care is advised when interpreting the PSER, as these rates are generally more statistically valid at an industry or company level. The PSER is calculated as PSER = (PSE Tier 1 + Tier 2) / work hours * 1,000,000**.** This target was established through a top-down approach without stakeholder involvement and OMV Petrom benchmarks its performance against IOGP data.

[MDR-M] **Metrics related to process safety**

[ESRS 2 MDR-M.75] Process Safety Events (PSEs) of Tier 1 and Tier 2 hold the utmost significance and are reported externally for industry benchmarking purposes.

Process safety

	M.U.	2024	2023
Tier 1	Number	5	6
Tier 2	Number	4	3
Process Safety Event Rate		0.16	0.15

[ESRS 2 MDR-M.77 a, b, c] Process Safety Events (PSEs) of Tier 1 and Tier 2 are evaluated on a periodical basis to maintain consistent insight into OMV Petrom's process safety performance. Each PSE is recorded and monitored in the Synergi reporting system. The metric measurement is not validated by an external body. PSEs are defined as unplanned or uncontrolled releases of any material, including non-toxic and non-flammable substances (e.g., steam, hot water, nitrogen, compressed CO , or compressed air) from a process, or events that could have led to such a release under slightly different conditions. The classification follows a tier system, where Tier 1 represents incidents with greater consequences, indicating the most significant lagging performance indicators, and Tier 2 reflects incidents of lesser consequence.

Social information

OWN WORKFORCE **150**

WORKERS IN THE VALUE CHAIN **171**

AFFECTED COMMUNITIES **184**

Own workforce

OMV Petrom's sustainable business is built on trustworthy labor relations, on employees' knowledge engagement and commitment.

We aim for good employment conditions, fair and equal labor relations favorable to performance and healthy relations among employees and employer. We prioritize the health and safety of our employees and constantly take measures to prevent or mitigate adverse impacts from our operations.

We aim to respect and protect human rights in line with the Universal Declaration of Human Rights (UDHR), UN Global Compact Principles, and International Labor Organization (ILO) guidelines. We operate according to our fundamental responsibilities in upholding human rights and labor rights.

Our personnel policy centers on long-term employment, flexible working conditions, well-paid jobs and development opportunities, that raise engagement to the mutual benefit between staff and the organization. Recognizing the significance of job security for individuals, society, and the region, we fulfill our responsibilities through contingency planning. The projects and programs sustaining the company's developments are conceived and executed based on participative management and in constant alignment with employees' representatives on aspects that may affect employee's interests.

Strategy

[DR SBM-3] **Material impacts, risks and opportunities and their interaction with strategy and business model**

[S1-SBM 3.13a, S1-SBM 3.13a i] OMV Petrom's Strategy 2030 shows how the company plans to transform for a lower carbon future. The actual and potential impacts on the company's own workforce are connected to its business model and plans, as these can only be put in motion safely and sustainably through the efforts of its employees. The People & Culture and HSSE Strategies are enablers in achieving OMV Petrom's Purpose and Strategy. The company constantly strives to advance positive impacts on its own workforce, related to working conditions offered, their physical and mental wellbeing, development opportunities and healthcare services.

OMV Petrom is fully aware that the high-hazard impact industry, where it operates in comes with increased safety risks, therefore fostering a company culture where HSSE shapes decision-making at every level is paramount.

The company aims at shaping an adaptable, innovative, efficient, and resilient organization, based on modern structures that function with lean processes, using efficient interfaces and digital solutions, which are adapted to an industry transitioning to Low carbon and renewable business solutions.

[S1-SBM 3.13a ii] During its double materiality assessment, OMV Petrom identified the need to provide consistent upskilling and career development opportunities in line with the business strategic goals, within a healthy work environment favoring well-being and inclusiveness, and facilitating cooperation and innovation. Creating a culture of continuous learning, with focus on digital and technical proficiency as well on transformational leadership capabilities, is one of the main pillars OMV Petrom relies on to deliver sustainable performance in its transition to low and zero carbon objectives.

[S1-SBM 3.13b] On its transition journey, OMV Petrom remains a reliable employer for its own workforce, leased personnel and value chain. As a major employer in the country, the company offers secure employment, flexible working conditions, and future-oriented skills development, thus attracting and retaining a diverse workforce. At the same time, it fosters opportunities for current employees through upskilling and reskilling, leading to better paid jobs. These positive impacts are present throughout OMV Petrom's operations and align with the exemplary labour practices in Europe.

Recognizing the industry's demand for specialized knowledge and skills, OMV Petrom addresses workforce aging, geographic distribution and challenging working conditions in its strategy to attract and retain young talent,

whether onsite or remotely. The company cultivates a pipeline of young experts through active collaboration with vocational schools and universities (please refer to S1-SBM 3.14c for details).

Investing in employee training represents an opportunity for enhanced efficiency, safety and operational performance, leading to streamlined processes, reduced waste, and optimized resource utilization, contributing to a sustainable and resilient business model. Continuous learning fosters innovation, enabling employees to introduce creative solutions that positively impact the business and society, address market demands, solve environmental and social challenges.

A highly skilled workforce enhances customer experience by delivering exceptional service and effectively meeting customer needs. This expertise fosters long-lasting client relationships, strengthens brand loyalty, and elevates the company's reputation.

The nature of OMV Petrom's industry exposes employees to chemicals, pollutants, constant noise, light, and other stressors, as well as the risk of injuries ranging from minor to severe, with potential long-term effects or fatalities. Such impacts arise from the company's operational profile and can lead to decreased employee commitment, lost workdays, and reduced productivity. As such, the company's strategy and business model embed clear health and safety considerations, based on rigorous safety protocols, continuous training, implementation of advanced safety technologies and provision of comprehensive healthcare services.

[S1-SBM 3.14] All people in our own workforce who could be materially impacted by OMV Petrom are included in the scope of disclosure under this chapter.

[S1-SBM 3.14a] To carry out its business activities, OMV Petrom directly employs specialized staff: own employees,and, when necessary, based on specific business needs, utilizes leased personnel, classified as non-employees under ESRS S1 Own workforce.

[S1-SBM 3.14b] In line with the double materiality assessment, with regards to own workforce, the company identified one potential material negative impact that is related to Health & Safety: exposure to chemicals, pollutants, constant noise, light, other stressors as well as low to severe injuries, with short to long term effect or even fatalities, due to operational profile. This impact is related to individual incidents that impact a specific location / operation / period.

[S1-SBM 3.14c] OMV Petrom's labor rights and practices stem from the collective bargaining agreement, with freedom of association serving as a stability pillar and key driver of the positive employee impact. The 2024-2025 collective labour agreement ensures steady and secure employment, increased income predictability, and transparent regulation through social dialogue. The following aspects are set in agreement with the representative trade union: the company minimum wage, the general salary increases, and additional benefits related to commuting, relocation and increments related to working conditions to maintain the appeal of certain positions.

Leased employees benefit from similar rights and working conditions as regular employees, as per the legal requirements.

The high trade union affiliation contributes to the enterprise stability and sustainability, providing a heathy and predictable work environment attentive to employees' needs and aspirations. This also promotes balanced labour relations, social harmony, and a performance-oriented culture.

OMV Petrom is committed to cultivating a highly skilled and knowledgeable workforce through comprehensive training and development programs, supported by an annual review process. The company's learning and development strategy revolves around the identification and development of skills that are essential for business-critical directions and areas, as well as advancing leadership skills.

Education also serves as a crucial instrument for ensuring workers and managers are aware of workplace risks and control measures, enabling them to operate more safely. This educational aspect is detailed in the Group Standard "HSSE Awareness and Competencies", which specifies the HSSE prerequisites for different classifications of employees. The new "Transformational Leadership Competencies" were developed to complete the business transformational framework. They define the behaviours expected from the company's leaders across the Group.

In the area of health, OMV Petrom has designed and implemented health services, programs, and campaigns targeting major health conditions, while raising awareness, promoting health, and preventing health complications, in order to advance its positive material impact.

Such examples include the Private Health Insurance program which has provided significant financial support to both employees and non-employees in difficult medical situations, as well as the Health: ON! Platform that has been

serving as a hub for all company-provided health programs and initiatives, both active since 2014.

[S1-SBM 3.14d] The company's traditional people culture relies on opportunities for long-term employment, job security, professional mobility and continuous development, with the employer ensuring favourable working conditions through adequate wages and dedicated benefits. These elements enhance employees' engagement and motivation, boosting operational efficiency and fostering innovation.

The opportunity to provide adequate wages arises from the dependency on a motivated workforce. By committing to locally applicable decent living wages standards, the company ensures that minimum salaries or wages meet legal requirements. Through rewards initiatives, the company plans to consider local cost of living indices, housing costs, healthcare expenses, educational needs and other assumptions in the determination of the salaries. Ensuring adequate wages is OMV Petrom's goal for promoting fair working practices and enhancing employee financial well-being.

The training and development opportunity stems from the company's dependency on a skilled and knowledgeable workforce. By investing in the professional and personal growth of its employees, OMV Petrom cultivates a more efficient and effective workforce. This leads to safe and enhanced operational performance, together with the generation of innovative ideas, and the creation of products and services that resonate with customers, all of which are dependent on the capabilities and growth of the employees.

Please refer to paragraph S1-SBM 3.13b within this chapter for more information regarding the cultural context and dependencies and interventions that transform risks into opportunities.

The risk of injuries (both high and low consequence) is linked to the dependency that the company has on its workforce, namely, on the employees' commitment and productivity. For this reason, OMV Petrom implements health and safety measures to safeguard its employees and maintain the continuity and effectiveness of its operations.

[S1-SBM 3.14e] The energy transition comes with a gradual change in the profile of OMV Petrom's business, necessitating new skills for emerging lines of business, while leveraging existing expertise for areas such as CCS or hydrogen.

Recognizing the significance of job security, the company engages in thorough contingency planning. When workplace adjustments or employment termination are required due to business, organizational, or security changes, OMV Petrom evaluates all the options and engages in constructive dialogue with maximum consideration.

The company focuses on digital solutions and automations across all business areas, creating new job opportunities and attracting new talent, while maintaining new development opportunities for existing employees (via upskilling and reskilling). The digitalization and automation allow remote supervision of technologies, making jobs accessible to a diverse workforce.OMV Petrom invests in education (through partnerships with vocational schools and universities), supporting the creation of a reliable and up-to-date pipeline of people and specialists that aligns with the company's strategy.

[S1-SBM 3.14f] OMV Petrom has no operations at significant risk of incidents of forced labour or compulsory labour. Forced labour or compulsory labour is banned and punishable by law in Romania, the country where our significant operations are focused.

[S1-SBM 3.14g] OMV Petrom has no operations at significant risk of incidents of child labour. The compay's major operations are in Romania, which has ratified the most relevant treaties regarding labour rights (e.g. Abolition of Forced Labour Convention No. 105, Minimum Age Convention No. 138) and its domestic legislation is robust (e.g. the minimum age for employment is not less than 15, hazardous work is prohibited for people aged under 18 and the law provides a comprehensive prohibition of the worst forms of child labour).

Additionally, the Human Rights Matrix addresses forced labour and child labour, which are also topics covered through human rights trainings for all employees.

[S1-SBM 3.15] OMV Petrom considers the following categories as vulnerable / at risk people in its own workforce: women and young employees. Traditionally, the oil and gas industry has been male dominated, particularly in blue-collar roles. OMV Petrom also operates in geographic areas where working conditions are less attractive to young people.

In order to gain an understanding of the needs of vulnerable groups within its own workforce, the company ensures open communication with its employees and their representatives under social dialogue, gathers data and considers incidents reported through the grievance mechanism and social dialogue, while trying to find mutual beneficial solutions via collective negotiations and good implementation of the

existing processes. These processes support professional flexibility and job security for all employees, including the most vulnerable.

In its efforts to understand and mitigate risks of harm to employees with specific characteristics, OMV Petrom fosters an inclusive culture through the implementation of antidiscrimination regulations, a grievance mechanism, and initiatives that celebrate diversity. This allows the creation of a larger pipeline for diverse workforce, alleviating eventual generational gaps. The company concentrates on technologization, digitalization and automation, to transform traditionally male-dominated jobs for women and young experts.

[S1-SBM 3.16] OMV Petrom's material risks and opportunities pertaining to own workforce are related to all its employees, and do not result from impacts and dependencies on specific groups of people.

Impact, risk and opportunity management

[DR S1-1] **Policies related to own workforce**

[S1-1.19] Our impacts, risks and opportunities are considered in our internal regulations, with the goal to set clear and transparent rules, as part of our management system. These regulations include:

- Code of Conduct

[MDR-P-a] The OMV Petrom Group Code of Conduct serves as a compulsory conduct guideline applicable to all our employees. It lays down OMV Petrom's specific commitments on transition to low carbon business, run responsible operations, foster people and communities, ethical business practices, corporate values and existing reporting channels.

[MDR-P (b-f)] For more details, please refer to the Climate change chapter.

- Human Rights Policy Statement

The Human Rights Policy Statement sets out OMV Petrom's commitment to adhere to the highest standards in order to provide its employees safe workplaces, as well as the company's commitment to ensure a high level of care for employees' well-being, physical and mental health across the Group [MDR-P-a].

[MDR-P (b-f)] For more details, please refer to the Climate change chapter.

- HSSE Directive

[MDR-P-a] The OMV Petrom HSSE Directive establishes the principles and rules for managing Health, Safety, Security & Resilience, and Environment (HSSE) across all stages of the company's business and activities, including capital projects and mergers and acquisitions. It serves as a framework for managing HSSE aspects with the aim of safeguarding people, the environment, assets, and the company's reputation, in accordance with OMV Petrom's HSSE Policy and its vision and mission of "Committed to Zero Harm – Protect People, Environment and Assets".

[MDR-P (b-f)] For more details, please refer to the the Climate change chapter.

- HSSE Policy

[MDR-P-a, b, c, f] The HSSE Policy states that the long-term business success of OMV Petrom depends on its ability to continually improve and ensure the quality of its activities, products, processes, and services while protecting people, environment, assets and reputation; therefore, health, safety, security, environment (HSSE) are integral parts of the business. The policy covers OMV Petrom Group. The Executive Board of OMV Petrom is the most senior level accountable for the implementation of the HSSE Policy. The requirements of the HSSE Policy are communicated through internal platforms, including training when major revisions of the HSSE Policy are undertaken.

- Occupational Safety Management Standard

This Standard defines the minimum requirements for effective occupational safety management in OMV Petrom. Occupational safety management is an integral part of the overall approach to manage HSSE and includes the systematic use of uniform instructions, practices and specifications aimed at achieving and maintaining safe work. The fundamental components include the organization, resources, management processes, people and equipment performance, the prevailing safety culture along with documented regulations and practices. The aim of Occupational Safety Management is to enable the organization to improve occupational safety practices, behaviour and performance [MDR-P-a]. The Standard covers OMV Petrom Group[MDR-P-b]. Each line manager in their area of responsibility is accountable for the implementation of the standard [MDR-P-c]. The requirements of the Occupational Safety Management Standard are communicated through internal platforms, including training when major revisions of the standard are undertaken [MDR-P-f].

▶ Health Management Regulation

This regulation defines the minimum requirements for health protection and promotion within the OMV Petrom Group. The purpose of this Group Standard is to describe the main principles, the roles and responsibilities as well as the communication protocols within OMV Petrom Group, providing a framework for managing all health-related aspects and ensuring collaboration with other HSSE specialists [MDR-P-a]. The scope of the policy, accountability for the implementation of the policy and methods for making the policy available to stakeholders are the same as for the Occupational Safety Management Standard [MDR-P-b, MDR-P-c, MDR-P-f].

▶ HR Directive

The Directive outlines the organizational structure and overview on People & Culture ("P&C") functions responsible for the diligent implementation of all people processes, in line with OMV Petrom's strategy. Its annexes cover aspects such as business ethics, non-discrimination and equal opportunities, anti-harassment standards, as well as the transparent process for handling labour-related grievances. The regulation helps mitigate reputational risks and ensures a transparent communication channel for complaints [MDR-P-a]. The Directive applies at Group level, ensuring aggregated and unified responsibilities throughout OMV Petrom Group, while also addressing specific local competencies [MDR-P-b]. The P&C Vice president is accountable for the implementation of the Directive [MDR-P-c]. The regulation is aligned with European and local legislation and best practices [MDR-P-d], and is available on the company Intranet and the communication channel as part of the Integrity platform [MDR-P-f].

▶ CLA and related processes, Internal Regulation and Related Guidelines

These regulations encompass most wage-related articles, including minimum wage and total remuneration. The CLA includes provisions for long-term employment, internal job opportunities (vacancies), flexible work-ing solutions (workplace, working time, rest time), work-life balance benefits, and aspects related to secure employment (income compensations during medical leaves, in case of job loss, in case of work incapacity). These regulations form OMV Petrom's Employer of Choice offer by providing competitive salaries and good working conditions, and opportunities [MDR-P-a]. The regulations primarily apply to all employees meeting the conditions described therein, with some aspects tailored to certain working conditions, jobs or business areas, mostly for retention purposes [MDR-P-b]. EB Members are accountable for the implementation of these regulations [MDR-P-c], which adhere to market best practices [MDR-P-d]. The availability is ensured through the company Intranet [MDR-P-f].

▶ Personnel Relocation Standard

The Standard addresses job opportunities driven by the enterprise or employees, supported by relocation and commuting benefits for employees and their family members [MDR-P-a]. This Standard supports all employees meeting certain conditions [MDR-P-b]. All senior managers are mainly accountable for implementing this Standard [MDR-P-c], which aligns with market best practices [MDR-P-d]. The method for making the Standard available to stakeholders is the same as for the CLA & related processes, Internal Regulation and Related Guidelines [MDR-P-f].

▶ Teleworking Procedure

The Procedures address the implementation of new ways of working, including the possibility of working remotely from home locations, and aims to increase labour relations flexibility and enhance work-life bal-ance [MDR-P-a] for all employees [MDR-P-b]. Responsibility for the implementation of this procedure lies with the EB member [MDR-P-c]. The procedure adheres to market best practices and European standards [MDR-P-d]. The method for making the Procedure available to stakeholders is the same as for the CLA & related processes, Internal Regulation and Related Guidelines [MDR-P-f].

▶ Commuting Procedure

The Procedure addresses the simplification of commuting conditions and reimbursement. It supports commuting to and from workplaces to home locations [MDR-P-a] for all employees [MDR-P-b]. Responsibility for the implementation of this procedure lies with the managers of each department where the employees are part off [MDR-P-c]. The method for making the Procedure available to stakeholders is the same as for the CLA & related processes, Internal Regulation and Related Guidelines [MDR-P-f].

- Grievance Mechanism (supported by Internal Regulation and P&C Directive)

The OMV Petrom grievance mechanism is implemented through several accessible channels, including the Whistleblowing Platform. The set-up is meant to ensure effective communication to management regarding employee needs and claims [MDR-P-a]. The mechanism applies across all OMV Petrom Group [MDR-P-b], and the responsibility for its implementation lies with the Vice President of P&C [MDR-P-c]. Through this mechanism, OMV Petrom commits to respect the European and national regulations on whistleblowing and grievances [MDR-P-d]. The availability of the mechanism is ensured via the company's Intranet [MDR-P-f].

[S1-1.20, S1-1.20a] The Human Rights Policy Statement outlines the company's commitment to maintaining human rights in its business operations. This commitment is a guiding principle for handling human rights issues in its daily business matters, comprising specific obligations like workers' rights, protective measures, vulnerable groups, environmental and climate change effects, as well as the Due Diligence Process in place, grievance management, awareness, and communication.

OMV Petrom Group is committed to respecting the human rights and labor rights of all employees, as out-lined in the Universal Declaration of Human Rights (UDHR), the International Labour Organization (ILO) conventions, and the United Nations Guiding Principles on Business and Human Rights (UNGPs).

[S1-1.20b] The company constantly informs and consults with employee representatives regarding developments in its activities that may affect their interests. All details of collective bargaining agreements are communicated through OMV Petrom's internal platform. The People and Culture (P&C) local teams actively keep leaders and employees informed. The P&C operating model and integrated project approach involves concept proposal by relevant function, followed by feedback integration from various stakeholders, ensuring both co-creation of tools and high adaption to organizational needs, thus resulting in more efficient people processes. MySF and Employee Self-Service are internal applications used for P&C and personnel administration, available for direct communication with employees. A formal grievance channel is also available under Integ-rity platform for serious claims such as, but not limited to discrimination, equal chances and harassment.

[S1-1.20c] OMV Petrom's grievance mechanisms is a key tool for preventing and managing negative impacts on local communities, employees, and other stakeholders.Each grievance is thoroughly investigated and addressed in a non-judicial manner , whether they are based on real or perceived issues, and whether the complainant is known or unknown, following the UN Effectiveness Criteria. Following the UN Guiding Principles on Business and Human Rights, the Human Rights Due Diligence Process involves four key steps:

- Evaluating both current and potential human rights impacts linked to the company's present and future business operations
- Integrating and acting upon the findings in the company's activities
- Monitoring the effectiveness of the company's actions
- Communicating on how these impacts are being addressed

The company is committed to a rightsholders' perspective, ensuring that any genuine or potential impact on our stakeholders' rights is professionally examined and acted upon accordingly. This ongoing due diligence process thus makes use of external resources and expertise, and involves external stakeholders, in particular impacted groups.

[S1-1.21] OMV Petrom respects human rights as outlined in the Universal Declaration of Human Rights and globally recognized treaties, including the International Labor Organization (ILO) core treaties. Having signed the UN Global Compact, we are fully committed to the UN Guiding Principles on Business and Human Rights and the OECD Guidelines for Multinational Enterprises.

[S1-1.22, S1-1.23] The HSSE Directive provides a framework for how OMV Petrom manages all HSSE aspects in order to protect people, environment, assets and reputation in line with its HSSE Policy and Major Accident Prevention Policy and in view of its HSSE Vision and Mission "Committed to Zero Harm Protect People, Environment and Assets".

[S1-1.24a] Principles on non-discrimination, equal opportunities, and prevention of harassment are subject to multiple regulations that establish interdictions, specific obligations and corrective measures and non-retaliation. Such regulations include the P&C Directive which is managed at local level through the CLA & Internal Regu-lation. Any misconduct related to the above aspects can be reported by employees claims via the Integrity Platform and are treated under established grievance mechanisms. When necessary, such cases may lead to disciplinary measures in accordance with existing processes.

[S1-1.24b] As per its Code of Conduct, OMV Petrom understands equality and non-discrimination as the cornerstone of the human rights edifice and supports the idea that no one shall be treated differently, in particular less favorable than others, simply because of characteristics such as gender, age, nationality, language, religion, political opinion, sexual orientation or ethnic origin. Additionally, in its Human Rights Policy Statement, OMV Petrom is also committed to equality, regardless of any ground such as race, gender, sexual identity, age, color, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, indigenous origin, property, family status, disability, health status, including mental health, or any other status.

[S1-1.24c] OMV Petrom provides positive action for people from groups at particular risk of vulnerability (protection of females and young people, protection of pregnant women in the context of working conditions) in line with the CLA provisions. The company has adopted measures to advance positive action, such as:

- Advancing equal opportunity: being mindful of gender equality in recruitment, hiring, and promo-tion practices.
- Supportive programs for career development and advancement for women, work-life balance, ma-ternity and parenting.
- Protective working conditions/interdictions to expose to difficult working conditions for young em-ployees and women.

[S1-1.24d] Principles on non-discrimination, equal chances, against any form of harassment, non-retaliation in case of whistleblowing, are subject to multiple regulations, by setting interdictions, specific obligations and correc-tion mechanism. OMV Petrom ensures the implementation of these principles through:

- Grievance Mechanism
- Disciplinary Misconduct process and regulation
- Training and Awareness
- Monitoring and Evaluation

[DR S1-2] **Processes for engaging with own workforce and workers' representatives about impacts**

[S1-2.27, S1-2.27a] OMV Petrom informs, consults and aligns with employee representatives regarding developments in the company's activities that may affect their interests, on policies, regulations and procedures that may impact employee relations.Such aspects include working time/rest time general models, rules and principles for granting important benefits, important changes of activities and jobs and their implications on people, reor-ganization and restructuring related mitigation and attenuation measures.

The Pulse Check is one of the company's most important tools to receive direct feedback from employees on aspects related to company culture, safety and others. Direct engagement occurs also at employee events with Executive Board members and other senior management, where information about the progress made on OMV Petrom's Strategy 2030 is shared. Direct engagement also occurs through the HSSE Walks that all managers are encouraged to perform, in order to have an open and structured dialogue about working conditions and safety culture. In order to encourage and enable the consultation and cooperation between employer and employees on safety and health matters, the company organizes quarterly Health and Safety Committees at different organizational levels.

[S1-2.27b] Constant information, consultation and alignment is performed between employer's and employees' repre-sentatives with the view to include employees' perspective into business decisions depending on the type of topic (CLA negotiations, interpretation, and implementation of the CLA, strategic measures concerning employees, projects and initiatives, daily business).

People and Culture (P&C) local teams actively keep leaders and employees informed. The P&C operating model and integrated project approach involves concept proposal by relevant function, followed by feedback integration from various stakeholders, ensuring both co-creation of tools and high adaption to organizational needs, thus resulting in more efficient people processes.

[S1-2.27c] Social dialogue within the company is conducted at multiple organizational levels, including the Supervisory Board (SB), Executive Board (EB), individual EB members, or specific business areas. This dialogue is facilitated by a dedicated organizational structure within the People & Culture function and occurs on a regular basis or in response to specific events.

In terms of health and safety, it is the duty of line management at every level of the organization to engage in transparent communication with employees about safety performance, insights gained from past experiences, potential risks and opportunities for enhancement, within their respective areas of responsibility.

[S1-2.27d] The implementation of a new collective labour agreement for 2024 – 2025 has commenced, providing a

predictable frame of labour relations with mutual benefits for employees and employer.

The outcome of the collective negotiation integrated employee's new interest in market trends, such as: ethical labour relations, flexible working conditions, simplification, work-life balance, low carbon. This agreement allows the company to gain valuable insights into the perspectives of own workforce, ensuring that their human rights are respected, and their evolving needs are met.

[S1-2.27e] At the end of each collective negotiation process, effective social dialogue within OMV Petrom and companies within Petrom Group is facilitated through the closing of the CLA and smooth implementation of the deriving processes, some of them requiring trade unions involvement, in all forms (information, consultation, agreement), depending on the topic. The social dialogue is deployed regularly through events at all levels of the company, covering all business areas.

Written communication with trade unions is monitored and addressed, aiming to support a fair and trans-parent social dialogue and to monitor the effectiveness of engagement within the company.

Pulse Check is part of OMV Petrom's Speak-up culture which encourages employees to express their feed-back within a safe and anonymous environment, via a dedicated platform.

In 2024, a rate of 87% in participation was achieved, with around 8,000 employees choosing to have their say. The Engagement score reflecting employee's perception on Engagement ("Say" about company, "Stay" within the company and "Strive"- perform with the company) was 81%, reflecting high motivation and commitment for achieving our business purpose.

With regards to safety, OMV Petrom supports an open reporting and learning culture, where everyone has the confidence to intervene, to stop unsafe work, to speak up, and feedback always is welcomed. Positive contributions to HSSE are recognized and rewarded and fair and transparent consequences for rule violations are applied. Additionally, walkarounds are performed to encourage direct engagement, and quarterly Health & Safety Commitees are organised for employees consultation.

[S1-2.28] Steps have been taken to gain insights of generations, women and disabled employees', by:

- Identification of vulnerable groups (see also S1-SBM 3.15)
- Tailored engagement initiatives
- Collaboration with workers' representatives
- Training and awareness programs
- Feedback mechanisms

[DR S1-3] **Processes to remediate negative impacts and channels for own workforce to raise concerns**

[S1-3.32, S1-3.32a] The aim of OMV Petrom is to assess all complaints received and to handle them with the involvement of dedicated roles and experts. Health & Safety is a subcategory of the social category defined under the grievance mechanism.

All complaints are treated in a serious manner, whether they are based on real or perceived issues, irrespective of the identity of the complainant, following the UN Effectiveness Criteria. For more details regarding OMV Petrom's Human Rights Due Diligence Process, please refer S1-1.20c. For information regarding as-sessment and investigation, resolution and remediation, as well as follow-up and feedback, please refer to the Affected communities chapter.

[S1-3.32b, c] There are multiple categories of grievances, including human rights issues, health and safety claims, and complaints, which are addressed through channels such as the Work Health and Safety Committee (CSSM), Synergi, and PetrOmbudsman.

The Grievance Management Process at OMV Petrom Group is integrated in the Compliance Management System, which ensures compliance with applicable legal provisions and internal regulations. Additionally, the company has established Whistleblowing channels, including the Integrity Platform (that fosters a dedicated partition for labour related complaints), Ethics helpline, dedicated email address, direct contact with the Compliance department. The PetrOmbudsman Department is another channel for own workforce to raise their concerns and receive independent and impartial counselling, in an informal and confidential set-up, with services being offered for staff in OMV Petrom Romania, Petrom Moldova, OMV Bulgaria and OMV Ser-bia subsidiaries. The mission of the PetrOmbudsman Department is to help people improve their soft skills, to develop healthy and sustainable working relationships.

[S1-3.33d] The available whistleblowing channels were reinforced quarterly through flyers attached to pay slips, in

or-der to reach frontline employees. Other communication channels with employees are also available via email and Employees' Front Desk, all of them being continuously communicated on the Intranet, via Newsletters and Blogs, while addressing various topics to employees.

[S1-3.32e] OMV Petrom's approach to track and monitor issues raised includes the following steps:

- Registering the number of Grievances, by category.
- Measuring the number of received grievances versus the number of resolved grievances.
- Measuring the number of grievances resolved through remediation.

Every grievance is investigated and resolved in a non-judicial manner, while providing employees with access to remedies, depending on the case. The Compliance department audits the contents of the database to ensure data accuracy and, where applicable, makes recommendations for improvement. Grievances are closely monitored to guarantee timely resolution.

The Whistleblowing Directive and P&C Directive also ensure that reports or incidents are investigated by personnel who are separated from the chain of management involved in the matter.

[S1-3.33] A Group-wide "Speak-up" channel was launched to assess the level of speak-up culture within the Group.

Where necessary, a deep dive into employee's opinions may be performed via local/structure related surveys to help gain a deeper understanding of specific needs and solutions.

OMV Petrom runs constant awareness campaigns on the importance of whistleblowing:

- A dedicated topic on whistleblowing was emphasized during the business ethics trainings.
- Info-screen messages were posted to encourage people to report observed misconduct.

OMV Petrom's internal Whistleblowing Directive & P&C Directive stipulate the "no retaliation" policy aiming at protecting individuals who report misconducts in good faith and outline methods for employees and external workers to make confidential and anonymous whistleblower complaints.

[DR S1-4] **Actions**

[S1-4-37] OMV Petrom takes actions to address material negative and positive impacts, and to manage material risks and pursue material opportunities related to its own workforce. The list of actions taken or planned by the company in this regard is presented below:

Safety

[S1-4-38a] OMV Petrom has adopted actions to prevent and mitigate the material negative impact on employees' health and safety and the risk of injuries.

- Education and training for hazard identification and risk awareness & mitigation (cluster including: development of Safety Training Centers, Train the Trainers session for practical Life Saving Rules; e-learning/g-learning for Life Saving Rules, Computer Based training (CBT) modules for HSSE awareness and competencies)

The main expected outcome is to increase the level of knowledge and awareness with regards to hazard identification and risk mitigation [MDR-A-a]. The action is continuous [MDR-A-c] and covers OMV Petrom's own workforce [MDR-A-b].

[S1-4-38d] In terms of progress, in 2024, OMV Petrom organized 6 Safety Training Centers for practical training of Life Saving Rules. 85 trainers have been trained for the delivery of the Life Saving Rules practical training, and 5,406 employees performed the Life Saving Rules e-learning and g-learning. A percentage of ~87% employees vs plan performed CBT [MDR-A-e].

- Organization-wide communication of safety alerts and lessons learned.

[MDR-A-a, b, e, 4-38d]. The main expected outcome is to increase the level of awareness of the company's employees in terms of incident prevention. OMV Petrom conducts communications on a case by case basis, and based on planning; these communications cover the company's own workforce. In 2024, 52 investigations were performed for incidents with severity level 3+ (meaning incidents impacting company own or contractors' employees health, environment, assets or reputation) and HiPo (High Potential incidents of levels 4 and 5 that could have led to fatality). Lessons Learned have been developed based on investigations and distributed in accordance with the provisions of the Standard on Reporting, Investigation and Classification of Incidents, resulting in over 1,200 organizational cross-learning activities recorded to Synergi.

- Audits & inspections to verify compliance with legal and internal regulations

[MDR-A-a, b, c] The main expected outcome is to identify non-conformities and engage employees in behaviour and work-place safety improvements. Audits and inspections are undertaken as per the audit program approved for each division, and they cover OMV Petrom's own workforce.

[S1-4-38d, MDR-A-e] In terms of progress, in 2024, a total of 13 HSSE Management System Audits were performed, including internal audits for ISO certified entities. Additionally, the company has undertaken 21,310 inspections on compliance with permits to work, 8,898 HSSE Walks and 731 life-saving rules assessments.

- Health & Safety Risk Assessments

The main expected outcome is to identify hazards, assess the risks and establish barriers [MDR-A-a]. These risks assessments are in line with the legal and internal requirements for working conditions [MDR-A-c], they are updated when the working conditions changed, and they cover OMV Petrom's own workforce [MDR-A-b].

[S1-4-38d, MDR-A-e] Risk registers are updated following changes in working conditions.

- Road Safety – In Vehicle Monitoring System and Defensive Driving Training

In 2024, we continued to monitor our employees' driving performance and increase the Road Safety awareness via IVMS (In Vehicle Monitoring System), which was again enhanced in 2024 when speed geofences were updated.

[MDR-A-a] Through Defensive Driving training we continue to offer periodical refreshment training and coaching for drivers and enhance their awareness regarding traffic risks exposure.The action covers OMV Petrom's own workforce [MDR-A-b] and is undertaken continuously [MDR-A-c].

[S1-4-38d, MDR-A-e] The results of the monthly data analysis give us the opportunity to further identify necessary improvements and to reward the good behaviors of the drivers.

Health

[S1-4-38a] OMV Petrom has adopted actions to advance the company's positive impact on employees' health.

- Mandatory occupational check-ups

The main expected outcome is to evaluate the health status of OMV Petrom Group own employees [MDR-A-a]. This action is continuous [MDR-A-c], and it covers OMV Petrom's own workforce [MDR-A-b].

[S1-4-38d, MDR-A-e] In terms of progress, in 2024, 100% mandatory occupational medical check-ups were performed, based on the available employee population.

- Health ON! Platform – for physical well-being: preventive health programs, flu vaccination, physiotherapy services

[MDR-A-a, b, c] The main expected outcome of the actions taken through the Health ON! Platform is to raise awareness, promote health, and prevent health complications. The actions are continuous, and they cover OMV Petrom's own workforce.

[S1-4-38d, MDR-A-e] The progress is tracked through the voluntary participation of employees to the dedicated health programs.

- Health ON! Platform – for mental wellbeing component and psychological support

[MDR-A-a, b, c] Other actions are taken through the Health ON! Platform to advance the company's positive impact on employees' mental wellbeing and offer psychological support, which are the main expected outcomes. The actions are continuous, and they cover OMV Petrom's own workforce in Romania.

- Private health insurance

The main expected outcome is to address medical necessity based on symptomatology of acute and/or chronic illnesses [MDR-A-a]. The action is continuous [MDR-A-c], and it covers OMV Petrom's own workforce [MDR-A-b].

[S1-4-38d] The progress is tracked monthly and quarterly through statistical data provided by the insurer regarding number of employees who accessed the private health insurer. Monitoring the claims data periodically ensures transparency and adherence to insurance industry standards, leads to quicker resolutions and better customer satisfaction and helps in identifying patterns and trends in claims, allowing an up-to-date health statistical information regarding our own workforce [MDR-A-e].

People and culture

[S1-4-38a] OMV Petrom has adopted actions to advance the company's positive impacts and opportunities on employees' working conditions and equal treatment and opportunities.

- People days process (PXP review and succession plans)

This is a performance & potential assessment focusing on employees holding positions at a certain levels who's main expected outcomes are to identify and grow OMV Petrom's talent, to promote diversity and mobility, build the leadership pipeline and drive sustainable performance across the Group [MDR-A-a]. This action is undertaken on an annual basis [MDR-A-c], and it covers OMV Petrom's own workforce [MDR-A-b].

[S1-4-38d] In 2024, this assessment process was redesigned to integrate relevant criteria referring to leadership competencies and company values and the timeframe of the whole process cycle was changed to include a second step with focus on development and succession. Therefore, the first step of the process starts in Q4 and ends in March 2025, impacting approximately 1000 employees.

- Fresh Graduates Program in E&P business division

The program consists of a comprehensive two-year professional growth plan that includes mentorship, a structured career plan, involvement in pioneering projects, and varied training methods that advance both technical and soft skills through hands-on professional experience, teamwork, and bespoke training sessions. The main expected outcome is to provide a strong foundation for graduates development to launch their career successful, equipping them with skills, experience and confidence. [MDR-A-a].

[S1-4-38d] In 2024, a number of 36 fresh graduates benefited from this program [MDR-A-e].

- Talent attraction programs: Open4U, Her energy Academy, OMV Petrom Excellence Scholarship

The Open4U internship program connects young individuals with OMV Petrom, offering a platform to start their careers with expert guidance. Interns explore the energy industry, gain business exposure, and work with experienced teams, acquiring practical knowledge and hands-on experience. Her Energy Academy is a six-month program where students engage in workshops, seminars, and field trips to Petrobrazi Refinery and Petrom City. The focus is on self-awareness, employability, personal branding, and critical thinking, equipping participants with essential skills for their future careers. The OMV Petrom Excellence Scholarship supports technical students from their second year of study and provides financial assistance and profes-sional development opportunities, fostering academic and professional excellence in technical fields [MDR-A-a]. The programs are organized annually [MDR-A-c], and they target OMV Petrom Group's own workforce [MDR-A-b].

[S1-4-38d] In terms of progress, in 2024, 82 students enjoyed the experience during the 12th edition of Open4Uor. Through HerEnergy Academy, 20 young women were engaged through technical training to facilitate their path to a successful career in the energy sector. 76 high-achieving students benefited from a scholarship through the OMV Petrom Excellence Scholarship, mainly from partnership universities [MDR-A-e].

- AZPC Program (A to Z on P&C)

[S1-4-38d, MDR-A-a, b, e] The A to Z on P&C program aims to improve transparency and understanding of core people processes while fostering closer connections with the organization. To make the recruitment process transparent, easy to understand and to streamline it, the company developed a comprehensive and interactive recruitment e-learning in 2024. The program covers OMV Petrom's own workforce. This initiative has been completed by over 160 hiring managers and colleagues.

[MDR-A-e] The "Total Rewards Reveal" project aims to ensure all employees understand the full scope of the current reward framework [MDR-A-a]. The project team trained more than 400 managers in effective communication and decision-making skills through hands-on sessions focused on the newly implemented MySF Compensation module. This initiative has resulted in enhanced transparency & accessibility, with positive feedback encouraging continued efforts and experience sharing among managers.

[MDR-A-e] Local events are organized to promote face-to-face interaction with local teams, facilitating direct questions and addressing specific topics. The P&C team travelled to E&P Assets, Petrobrazi Refinery, and Petrom City, engaging in open dialogue with over 550 colleagues. These events, which included panel discussions, Q&A sessions, and interactive workstations on main people processes, involved the entire P&C team from both headquarters and local offices.

[MDR-A-c] This program started in January 2024 with the initiatives above and will continue in 2025.

▶ Pay gap project

[MDR-A-a, b, c] The main expected outcome is to identify and evaluate pay gap requirements in alignment with CSRD/ESRS and to meet the legal requirements of the EU Directive as well as respective local legislation for OMV Petrom and its subsidiaries from EU countries. It also aims to close the pay gap in accordance with legal require-ments. Existing P&C processes and policies will be revised to reflect the legal requirements. This action is planned annually, and it covers OMV Petrom's own workforce, across all operations in EU countries.

[S1-4 -38d, MDR-A-e] The action is planned to identify and evaluate the pay gaps and asses the possible scenarios to meet the legal requirements.

▶ Idea Management

[MDR-A-a, b, c] The main expected outcome is capturing, developing and rewarding valuable ideas from across the organi-zation that consistently support employees at all levels by using a dedicated tool. Rewards (bonuses) are paid for successfully implemented ideas, calculated based on a formula in case of quantifiable net benefits, while for non-quantifiable benefits (qualitative benefits), they are evaluated based on an estimation methodology. This action is continuous, and it covers OMV Petrom's own workforce.

[S1-4-38d, MDR-A-e] The progress of the Idea Management action is assessed qualitatively, 7 ideas uploaded in the system and assessed as of the beginning of 2024.

▶ Skills of the future

[MDR-A-a,b,c].The action is meant to help OMV Petrom to deliver its 2030 Low Carbon Business targets through staffing in all divisions by 2025. Short- to mid-term, LCB resources are secured mostly through a mixture of internal and external hires in order to ensure the right skillset and mindset. Mid to long-term, the company plans to secure capabilities through build up and upskilling of existing personnel and by leveraging existing partnerships, such as through fresh graduates from InnoEnergy programs and universities.

[MDR-A-b] covers OMV Petrom's own operations

▶ My SF Learning

The platform is continuously updated regarding Learning & Development (for personal, leadership, business, technical and digital skills), in accordance with business needs and the people development plans. The learning offer is available through the internal platform where employees can choose from a range of train-ing and development options fit to their position and career path.

[MDR-A-a, b, c] The main expected outcome is to build highly skilled and knowledgeable workforce. This action is continuous, and it covers OMV Petrom's afiliates' operations.

[S1-4-38d, MDR-A-e] The progress is tracked and communicated in the company's internal development tool, My Success Factor.

▶ Speak Up channel

The Speak Up channel is a new platform for addressing work-related misconducts by employees, through a process that ensures neutrality and confidentiality of grievances addressed by employees. It is an extension of Integrity platform. The platform allows for the provision of remedy [MDR-A-d], and its main expected outcome is to assess reports and address them through specific processes. The action is continuous [MDR-A-c], and it covers OMV Petrom's own workforce and value chain [MDR-A-b].

[S1-4-39] To identify the actions needed and appropriate in response to actual or potential negative impacts on its employees, OMV Petrom engages with the employees to gain insight into potential negative impacts and understand the perspectives and concerns of its employees. These consultations take place through various communication channels, as for instance the periodical Health and Safety committees, open dialogue during Walk Arounds and the HSE audits.

The General HSSE framework is designed to identify and respond to negative health and safety impacts on the employees. It outlines targets, action plans, periodical monitoring, reporting and accommodates top-level managerial input.

Annually, the company develops an HSSE plan which follows local guidelines, legislative requirements, and global best practices, informed by strategic focus areas and initiatives. To ensure the plan's effectiveness, OMV Petrom conducts quarterly monitoring reviews to assess its implementation. The results are presented and analyzed by

the management representatives at different organizational levels, guiding the company's actions to reduce the actual or potential negative impacts.

In response to the health profiles of OMV Petrom's employees, the company designed and implemented health services, programs, and campaigns that target and address major health concerns. These initiatives aim to increase awareness, promote health, and prevent health complications, thereby mitigating actual or potential negative impacts on the well-being of its workforce.

[S1-4-40, S1-4-40a] The risk of injuries (both high and low consequence) is linked to the dependency that the company has on its workforce, namely, on its employees' commitment and productivity. In order to mitigate any Health and Safety risk, as part of HSSE Risk Management Standard implementation, occupational health and safety hazards are promptly identified, assessed, and control measures are implemented as per the standard guide-lines. These guidelines, derived from international standards set by IOGP/IPIECA, aim to assess various risks including chemical exposures, psychological strain, and physical injuries. The medical team collaboratively works with the local HSSE team to develop and maintain comprehensive and up-to-date occupational risks records at each site.

[S1-4-40b] Refer to the list of actions above for the actions planned or taken by OMV Petrom to pursue material opportunities for its own employees.

[S1-4-41] The company prioritizes the prevention and mitigation of material negative impacts on its workforce. The personnel policy centres on long-term employment that benefits both employees and the organization. OMV Petrom acknowledges the significance of job security for individuals, society, and the region, and it proactively manages responsibilities through contingency planning. In situations where changes in the business, organization, or security necessitate workplace adjustments or terminations, the company thoroughly explores all possibilities, engages in meaningful dialogue, and acts with consideration.

In cases where a transfer of parts of the undertaking occurs, the company ensures, under the social dialogue frame, that the existing rights and obligations are maintained with the new employer, providing a period of protection that offers predictability and security in their employment relationships.

In the area of Health and Safety, OMV Petrom's aim is to reach exceptional performance without incidents and impacts, by utilizing a strong and reliable HSSE management system. The primary guidance is deter-mined by the company's Vision, Mission, Policies and Strategy. Specific regulations and process descriptions outline the functionality and scope of the management system; for more details, refer to the Policies section of this chapter. All OMV Petrom employees receive regular HSSE training pertinent to their roles and responsibilities to prevent negative impacts. HSSE training subjects are coordinated either at the global (OMV Group) or local (Company) level. They are organized through My Success Factors platform under the Learning module. In addition, within each business unit, local internal deliveries are carried out, tailored to legal requirements related to job exposure and frequencies implied within the specific activities.

[S1-4-43] Information regarding the resources allocated to OMV Petrom's action plan was included in the description of the actions, if relevant.

[S1-4-AR-40, S1-4-AR-40a] OMV Petrom's processes, initiatives and regulations, whose primary aim is to deliver positive impacts for its own workforce, are built upon continuous feedback from various levels of the organization and from all divisions, ensuring co-creation and increased engagement. Executive Board members are engaged not only in the approval process, but also in the communication throughout the organization, with key topics being disseminated via webcasts, events, and Intranet communication.

New processes and initiatives are discussed with employees' representatives, allowing the company to gain insights from all categories of employees and business areas. Working conditions aspects, secure employment, minimum wages, and benefits are subject to CLA negotiations, reflecting a consensus between the company and employees' representatives, namely the representative trade union.

[S1-4-AR-43] OMV Petrom undertakes efforts to mitigate the impact on its own workforce during the transition to a greener, climate-neutral economy. The company has undergone a complex transformation process, and has thus developed expertise in handling difficult situations, in the context of a just transition (such as restructurings and outsourcings). The company analyses and coordinates all such measures with social partners to reduce negative impacts on employees and to identify the best solutions for supporting their transition.

In this respect, trade unions are engaged early in the process to identify vulnerable categories, explore available solutions, and reduce the negative impact of the measures (through intra-company placements, reskilling, upskilling). In

compliance with the legislation and collective labour agreement, OMV Petrom provides protection for vulnerable categories, offers time off for affected employees for job searching, gives prior notice and financial compensations, as well as administrative assistance to facilitate access to public unemployment services.

Metrics and targets

[DR S1-5] **Targets related to managing material negative impacts, advancing positive impacts, and managing material risks and opportunities**

[S1-5-46] OMV Petrom has set targets to address material impacts, risks and opportunities on own workforce. These are presented below:

Target	Progress
Achieve zero work-related fatalities	0 fatalities
Increase average number of annual learning hours to a minimum of 30 hours per employee	19 hours
Train all OMV Petrom Group employees in human rights	~51%
Increase share of women at management level at 35% by 2030	32%
Measure and maintain level of engagement	81%

▶ Achieve zero work-related fatalities

[MDR-T-a, b, c, e] The target to achieve zero work-related fatalities for 2030 advances OMV Petrom's commitment to work towards zero incidents. The target is directed linked to the HSSE policy, as the company's ambition is to become an industry leader in HSSE. The "Committed to Zero Harm – Protect People, Environment and Assets" vision guides its HSSE culture, behaviours, actions and decisions. The target is absolute, and covers separately employees, contractors' employees and third parties.

OMV Petrom considers as fatality the death of its own or contractor's employee, resulting from a work-related injury, when the person concerned dies within 12 months as a result of the injury. Fatality of a third party is the death of someone other than an employee, contractor or subcontractor, deathly injured or killed in conjunction with an operational activity of the company (for example, a driver hitting and killing an uninvolved third party such as a pedestrian). Non-work-related fatalities are not considered, and 'delayed' deaths (that occur after the incident) are included if they were a direct result of the incident [MDR-T-f].

[MDR-T- i, h, j] Internal stakeholders were involved in setting the target. No changes occurred in the target or the methodologies / assumptions behind it since the last reporting period. The progress is disclosed annually, and the achievement is monitored on a quarterly basis.

▶ Increase average number of annual learning hours to a minimum of 30 hours per employee

[MDR-T-a, b, c, d, e, f] This target is directly linked to OMV Petrom's learning strategy 2024. The target is absolute and applies to all employees of the company. The target is not measured against a base year, however, it was set for 2030. The learning reports from the My Success Factor system, monitored through the Learning Dashboard, were used in establishing the target.

[MDR-T-h, i, j] The main stakeholder involved in setting the target is the Executive Board, as part of its decisional role on setting sustainability-related KPIs. No changes occurred in the target or the methodologies / assumptions behind it since the last reporting period. Learning hours are monitored via the Learning Dashboard.

▶ Train all OMV Petrom Group employees in human rights

[MDR-T-a] This target is directly linked to OMV Petrom's Human Rights Policy Statement. [MDR-T-b, c] The target is relative and applies to all OMV Petrom Group employees. [MDR-T-d, e] The target is not measured against a base year, however, it was set for 2030. [MDR-T-f] The target is monitored throughout an internal database and progress is annually reported since 2022. [MDR-T-h] Internal stakeholders were involved in setting the target. [MDR-T-i] No changes occurred in the target or the methodologies/ assumptions behind it since the last reporting period. [MDR-T-j] The progress is disclosed annually and the achievement is monitored on a quarterly basis.

- Increase share of women at management level at 35% by 2030

[MDR-T-a, b, c, d, e, f, h, j] This target is directly linked to material IROs (job opportunities for all employees and development opportunities) and sustains our aims on diversity and inclusion area. The target applies to management positions at senior level (executive & advanced level). The target is not measured against a base year, however, it was set for 2030. The target is monitored based on reports via My SF system.The main stakeholder involved in setting the target is the Executive Board, as part of its decisional role on setting sustainability-related KPIs. No changes occurred in the target or the methodologies / assumptions behind it since the last reporting period.

- Maintain level of engagement:

[MDR-T 80a] Measuring the level of employees motivation contributes to achieving our business strategic objectives, checking and action towards the indicators which directly impacts their engagement. [MDR-T 80b] A specific target level has not been established, aiming to maintain a satisfactory scores of engagement, results being interpreted considering the context. [MDR-T 80c] This target includes all own employees at consolidated group level. [MDR-T 80d] The baseline value and year is the previous Pulse Check year. [MDR-T 80e] We will measure Pulse Check and other engagement surveys until 2030. [MDR-T 80f, i] Pulse check is implemented via an external partner (Kincentric/Mercer) and contains questions aligned at group level, based on a standard understanding using international similar industry and top quartile organization benchmarks. Company history data is used for comparison. [MDR-T 80h] The Pulse check questionnaire is aligned with EB members. [MDR-T 80j] Pulse Check results are disseminated via the organization to Executive Board Members and all line managers in target to access results. P&C is owner of the initiative.

[DR S1-6] **Characteristics of the undertaking's employees**

[S1-6.50a]

Employees head count broken down by gender

	December 31, 2024	December 31, 2023
Gender	-	-
Male	8,189	5,613
Female	2,356	2,101
Other	-	-
Not reported	-	-
Total	**10,545**	**7,714**

Other gender: In some Member States it is possible for persons to legally register themselves as having a third, often neutral, gender, which is categorised as "other" in the table above. However, if the undertaking is disclosing data about employees where this is not possible, it may explain this and indicate that the "other" category is not applicable

[S1-6.50d] [MDR-M-77.a] The total number of employees is reported from the SAP HR system, recorded at the end of the last month of the year. The data includes headcount, gender directly extracted from SAP HR. The calculation is headcount-based, in line with the OMV Workforce Indicators definition and Reporting Guideline. The data is collected for OMV Petrom Group, and includes Romania, Moldova, Bulgaria, Serbia, UK, and Italy. [MDR-M-77.b]. The measurement of this metric is not validated by an external body.

Employees headcount broken down by regions and countries

Europe	December 31, 2024	December 31, 2023
Romania	10,342	7,520
Other countries	203	194
Total	10,545	7,714

[S1-6.50d, MDR-M-77.a, b, c] The total number of employees is reported from the SAP HR system, recorded at the end of the last month of the year. The calculation is headcount-based, in line with the OMV Workforce Indicators definition and Reporting Guideline. The data is collected for OMV Petrom Group, and includes Romania, and other countries (Moldova, Bulgaria, Serbia, UK, and Italy). The measurement of this metric is not validated by an external body.

The methodology for data collection is the same as for the data reported in Table: Employees broken down by gender. OMV Petrom has 50 or more employees, representing at least 10% of the total number of employees in Romania. For the other countries this criteria does not apply. The measurement of this metric is not validated by an external body.

[S1-6.50b]

Employees headcount broken down by gender* and type of employment

	December 31, 2024					December 31, 2023				
	Female	Male	Other[1]	Not disclosed	Total	Female	Male	Other[1]	Not disclosed	Total
Number of employees	-	-	-	-	-	-	-	-	-	-
thereof permanent employees	2,294	7,910	-	-	10,204	2,079	5,524	-	-	7,603
thereof temporary employees	62	279	-	-	341	22	89	-	-	111

1 Gender as specified by the employees themselves

[S1-6.50d, MDR-M-77.a] The methodology for data collection is the same as for the data reported in: Employees broken down by gender. The data includes headcount, gender, and employment type (full-time and part-time) information directly extracted from SAP HR. Employment contracts (permanent and temporary) are identified based on the "Contract End Date" in the SAP HR system.

[MDR-M-77.b] The measurement of this metric is not validated by an external body..

[S1-6.50c]

Total number of employees who have left and employee turnover rate

	2024		2023	
	Number	%	Number	%
Total number of employees who have left	**464**	**4**	**411**	**5**

[S1-6.50d, MDR-M-77.a] The total number of employees who have left the company during the reporting period is also tracked in the SAP HR system. The turnover rate is calculated using the formula: % turnover rate = (Number of exits for the whole reporting year / Number of Headcount at the end of the year). Metric includes all external and intercompany exits as an absolute figure (sum) of all exits and turnover during the reporting year. This methodology ensures a comprehensive and accurate representation of employee turnover. Limitations include potential discrepancies in data entry and timing of data extraction. [MDR-M-77.b] The measurement of this metric is not validated by an external body.

[S1-6.50f] The OMV Petrom employee headcount metric is presented also in table Employees headcount broken down by gender and type of employment. Average number of employees, within the Notes to the consolidated financial statements for the year ended 31st of December 2024

[DR S1-8] **Collective bargaining coverage and social dialogue**

[S1-8-60 a] The percentage of total OMV Petrom group (Romania and other countries) employees covered by collective bargaining agreements is 98%.

Collective Bargaining Coverage

	Collective Bargaining Coverage		Social Dialogue
Coverage Rate	**Employees – EEA (for countries with >50 empl. Representing >10% total empl.**	**Employees – Non-EEA (estimate for regions with >50 empl. Representing >10% total empl.)**	**Workplace representation (EEA only) (for countries with >50 empl. Representing >10% total empl.**
80-100%	Romania		Romania

[S1-8.60b,c; S1-8.63a, b, S1-8.AR 70] In Romania, the only country where OMV Petrom Group has significant employment defined as at least 50% employees by headcount representing at least 10% of the total number on group level, all employees are covered by more collective bargaining agreements.

For the other countries (Moldova, Bulgaria, Serbia, UK, and Italy), OMV Petrom Group does not have significant employment.

[MDR-M-77.a] Data is reported from the SAP HR system for Romania, while other countries provide their input via a questionnaire through local HR teams. All data are consolidated. The percentage of employees covered by collective bargaining agreements is calculated using the formula: (Number of Employees Covered by Collective Bargaining Agreements / Total Number of Employees) x 100

[MDR-M-77.b] The measurement of this metric is not validated by an external body.

[DR S1-10] **Adequate wages**

[S1-10.69] All OMV Petrom employees are paid an adequate wage. OMV Petrom is committed to respect local laws and does not offer salaries below the local legal minimum wage.

[MDR-M 77a,c] Data is reported from the SAP HR payroll system for Romania, while other countries provide their input via an email through local HR teams. Data is compared on case by case basis with the minimum applicable wage for each region.

[MDR-M 77b] The metric is not validated by an external body.

[DR S1-11] **Social protection**

[S1-11.74, a-e] All employees from OMV Petrom Group in Romania, Bulgaria, Serbia and Moldova are covered by private health insurance. Employees from United Kingdom and Italy are insured through AXA. Other standard benefits for full-time employees include retirement bonus, depending on the length of service; and parental leave.

[S1-11.75] All OMV Petrom employees are covered by social protection

[DR S1-13] **Training and skills development metrics**

[S1-13.83a, S1-13.83b]

Career development, performance reviews and average training hours

	2024	2023
	Average	Average
Percentage of employees that participated in regular performance and career development reviews	41%	52%
Average number of training hours per employee	19	33

[S1-13.83a, MDR-M 77 a,b, c] The metric is calculated as percentage of employees that have an eligible performance plan registered in the company's internal system, My Success Factors, out of the total number employees on OMV Petrom group level, excepting out of scope categories like blue collars, incoming expats, etc. The measurement of the metric is not validated by an external body.

[S1-13.83b, MDR-M 77 a,b, c] The average number of training hours per employee is calculated as total number of

training (with both physical and online participation) hours, registered in the company's internal tool, My Success Factors system, divided by the total number of employees (headcount).

[DR S1-14] **Health and safety metrics**

[S1-14.88b,c]

Health and safety metrics[1]

	M.U.	2024	2023
Number of hours worked	mn	16	15
Number of fatalities as result of work-related injuries	Number	0	0
Lost-Time Injury Rate (LTIR)	Rate (per 1 mn hours worked)	0.30	0.33
Number of recordable work-related accidents	Number	7	8
Rate of recordable work-related accidents/ Total Recordable Injury Rate (TRIR)	Rate (per 1 mn hours worked)	0.42	0.53
Number of days lost to work-related injuries	Number	454	184

[1] Includes OMV Petrom staff and assigned/allocated personnel who is paid directly by an OMV Petrom Group company and leased staff working for an OMV Petrom Group company. It also includes data for OMV Petrom Global Solutions S.R.L. (Romanian entity accounted using equity method), in line with internal procedures.

For OMV Petrom Group, excluding OMV Petrom Global Solutions S.R.L., in 2024, number of hours worked are 15 mn, LTIR is 0.34 and TRIR is 0.48.

Number of hours worked: [MDR-M 77a,c] The total number of hours performed and recorded in the company's internal reporting tool, Synergi. Absentees for longer periods (e.g. maternity leave) shall be excluded from this statistic. [MDR-M 77b] The metric is not validated by an external body. [MDR-M 77c] The metric is labeled as Hours worked in the company's internal tool.

Number of fatalities as result of work related injuries:[MDR-M 77a,c] A fatality is the death resulting from a work-related injury when the person concerned dies within 12 months as a result of the injury. Non work-related fatalities are not included. [MDR-M 77b] The metric is not validated by an external body.

Lost-Time Injury Rate: [MDR-M 77a,c] The number of lost time injuries (fatalities and lost workday injuries) per one million hours worked. The rate is calculated in the company's internal reporting tool, Synergi. Calculation and report: LTIR = LTI / hours worked * 1,000,000 (where LTI = FAT + LWDI) LTIR is calculated on an annual basis. [MDR-M 77b] The metric is not validated by an external body.

Number of recordable work-related accidents: [MDR-M 77 a,c] Total Recordable Injuries (TRI) is the sum of injuries resulting in fatalities, permanent total disabilities, lost workday injuries, restricted work injuries and medical treatment injuries. Data is reported and calculated in the company's internal reporting tool, Synergi. Calculation and report: TRI =FAT + LWDI + RWI + MTI. [MDR-M 77b] The metric is not validated by an external body.

Total Recordable Injury Rate: [MDR-M 77a,c] Total Recordable Injury Rate (TRIR) is the number of recordable injuries (fatalities + lost workday cases + restricted work day cases + medical treatment cases) per 1,000,000 hours worked. It describes the average incident frequency related to the working time performed. The metric is recorded in the company's internal reporting tool, Synergi. Calculation and report: TRIR = (FAT+LWDI+RWI+MTI) / hours worked * 1,000,000. Note: TRIR is calculated on an annual basis. [MDR-M 77b] The metric is not validated by an external body.

[S1-14.88] All the people in our own workforce are covered by the health and safety management system based on legal requirements and/or recognised standards or guidelines.

Number of days lost to work related injuries. [MDR-M 77a,c] Lost workdays, as labeled in the company's internal reporting tool, Synergi, represents the sum total of calendar days (i.e. running days including rest days, weekend days, leave days, public holidays) after the day on which the occupational injury occurred, where a person reported under LTI was unfit for work and did not work (synonym: days off work). Where absence from work extends beyond the year end, the actual or estimated days unfit for work in the following year should be added to those for the reporting year in computing the number of lost work days i.e. days unfit for work (only possible until the final close of the corresponding reporting period). The maximum lost workdays reportable for each lost workday case is 180. Days unfit for work between a fatal incident and the date of death are not included. Lost workdays resulting from commuting accidents are recorded separately. [MDR-M 77b] The metric is not validated by an external body.

[DR S1-16] **Remuneration metrics (total remuneration)**

[S1-16.97b] The annual total renumeration ratio of the highest paid individual to the median annual total remuneration for all employees is 60.7.

[MDR-M-77.a] Data is reported from the SAP HR payroll system for Romania, while other countries provide their input via an email through local HR teams. All data are consolidated. An insignificant (<1%) number of employees with a different compensation policy was excluded, with no influence on the rate. The annual total remuneration ratio of the highest-paid individual to the median for all other employees is calculated using the formula: (Annual total remuneration for the highest paid individual) / (Median employee annual total remuneration [excluding the highest-paid individual]).

[MDR-M-77.b] The measurement of this metric is not validated by an external body other than the assurance provider.

[DR S1-17] **Incidents, complaints and severe human rights impact**

[S1-17.103a, b, c, d; S1-17.104, S1-17.104a, b]

Incidents, complaints and severe human rights impacts

	M.U.	2024	2023
Number of severe human rights issues and incidents connected to own workforce	Number	0	-
Number of severe human rights issues and incidents connected to own workforce that are violations of UN Global Compact Principles and OECD Guidelines for Multinational Enterprises	Number	0	-
Amount of material fines, penalties, and compensation for severe human rights issues and incidents connected to own workforce	RON mn	-	-

[MDR-M 77 a, c] We have defined the severity of human rights incidents based on categories of scale (e.g. forced labor, child labor, human trafficking), scope (significant number of people being affected) and irremediability (difficult or impossible to remediate), while each one of them by itself can make an impact severe.

[MDR-M 77 b] The metric is not validated by third party.

Workers in the value chain

To mitigate supply chain risks, OMV Petrom extends the legal requirements, internal rules, and standards applicable to OMV Petrom to its suppliers and contractors. Our supply chain partners are obligated to fully comply with the content of the OMV Petrom Code of Conduct and are required to sign the OMV Petrom Code of Conduct. In addition, our suppliers must accept the General Conditions of Purchase which further detail our business standards (e.g. labor rights), as an integral part of our contractual agreements. OMV Petrom reserves the right to terminate relationships with supply chain partners if noncompliance with applicable policies is identified or if is not rectified in a timely manner.

Safety carries paramount importance and is a fundamental component of OMV Petrom's processes. We hold the safety of our suppliers and contractors in the same high regard as that of our employees'. As such, we expect them to adhere to our standards and we monitor compliance throughout the entire duration of their contracts.

Furthermore, we have integrated sustainability requirements throughout our supply chain with the aim to drive a positive change in the sustainability performance of our suppliers and contractors while mitigating potential negative impacts such as economic disruptions due to delays in payment.

Strategy

[SBM-3 S2] **Material impacts, risks and opportunities and their interaction with strategy and business model**

[S2-SBM 3.11a] For its double materiality assessment, OMV Petrom has performed a value chain mapping, which is presented in the General disclosures chapter. This showcases the location of the company's key material sustainability impacts, risks and opportunities across its full value chain.

The following workers materially impacted by OMV Petrom Group are included in the scope of disclosure under ESRS 2, as per the following categories:

Upstream:

- Services: Workers of contractors (Tier 1) and subcontractors (Tier n) performing services at OMV Petrom Group's site or on behalf of OMV Petrom Group, e.g. drilling, road, water and air transportation, maintenance, engineering, facility management, catering, security, consultants working from their own offices, etc.
- Products: Workers of Tier 1 supplier delivering goods/materials to OMV Petrom Group (compressors, raw materials, pipes, engines, etc.)

A contractor, selected in a tendering process based on its offer, provides services or works for OMV Petrom Group's companies, across various business areas and project phases, as defined in the contract.

A subcontractor is an entity, engaged by the Contractor to perform services / work packages that are part of a contract concluded between the Contractor and the Company (i.e., any OMV Petrom Group company) for the fulfilment of the contracted scope of work without being a party to this Contract. The Subcontractor is proposed by the Contractor and approved by the Beneficiary after alignment with the Procurement Responsible prior contract awarding. Any new subcontractor proposed by Contractor during contract implementation has to be approved by Beneficiary in the Subcontractor Management application.

A supplier is a third-party company delivering goods or materials to OMV Petrom, but no services are associated to it.

[S2-SBM 3.11b] The company has not identified commodities, countries or geographic areas with a high risk from a human rights perspective for its value chain workers.

[S2-SBM 3.11c] For workers in the value chain, OMV Petrom has identified two potential negative impacts in relation to the working conditions subtopics:

- Ineffective supplier engagement which may lead to poor labor practices or violation of human rights, is considered a limited impact as it is linked to individual relationships with each supplier or contractor.
- Safety hazards associated with the activities of the upstream own operations, for contractors on our sites, which is considered a limited impact as it is linked to single operational sites.

[S2-SBM 3.11d] The following positive impacts have been identified for workers in the value chain:

- Fair payment practices provide greater job security and better working conditions for upstream value chain workers.

OMV Petrom has implemented continuous monitoring of payment terms, to ensure compliance with the 60-day payment term through the SAP system, analysing and addressing any payment blocks.

- Compliance with minimum human & labor rights for upstream value chain workers is ensured through OMV Petrom's policies (e.g. standards laid out in the OMV Petrom Code of Conduct are part of the General Purchasing Conditions). This impact is addressed through multiple actions, such as:
  - Supplier pre-qualification and adherence to the Code of Conduct to ensure that suppliers and contractors meet minimum human, labor rights, safety, and sustainability requirements as part of the pre-qualification and General Purchasing Conditions;
  - Improvement of subcontractor management through a new online approval process and tool to ensure transparency and compliance with OMV Petrom's HSSE, Compliance, and Human Rights requirements for subcontractors working on specific service contracts;
  - HSSE Walks with contractor managers to promote open dialogue with workers and their management and to ensure compliance.
- Supplier engagement, pre-qualification, assessment and audits lead to improved working conditions for upstream value chain workers.

The actions undertaken by OMV Petrom to advance this positive impact include, additionally to the ones related to the previously listed positive impact, the following

  - Supplier audits and assessments, conducted on-site or off-site with external auditors or rating agencies, to evaluate suppliers' sustainability performance and mandate improvements for those scoring below 45 points in EcoVadis Assessments or requiring corrective actions from other audits;
  - Service quality and HSSE Experience exchange meetings with various stakeholders to enhance supplier engagement and assessment by identifying improvement opportunities, sharing good practices, and monitoring contractual KPIs to ensure continuous improvement and effective performance measurement;
  - Forums and safety performance meetings with contractors to enhance supplier engagement and assessment, aiming to identify gaps and improvements;
  - Road Safety Audits, incorporating the latest safety requirements and certifications, along with the annual Road Safety Forum, to enhance supplier engagement and assessment by exchanging experiences, initiatives, best practices, and addressing transportation safety challenges.

For more information on each action, refer to section DR S2-4 Actions under this chapter.

The categories of value chain workers that are positively affected are reported at S2-SBM 3.11 a.

[S2-SBM 3.11e] In line with the double materiality assessment process (please see to ESRS 2 - IRO-1), no material risks and opportunities resulted as material in relation to workers in the value chain.

[S2-SBM 3.12] OMV Petrom has identified the following vulnerable groups, with the potential to be materially impacted as part of the company's value chain workers:

- Migrant workers
- People with special needs
- Minorities
- Women
- Young and elderly workers
- Workers in Hazardous Roles

The methodology for identifying risks related to vulnerable categories includes employee surveys and data analysis such as: supplier risk report and monitoring and the company's incident reporting system Synergi.

Monitoring and continuous improvement are achieved through regular assessments such as workplace audits, supplier and contractor audits and employee feedback.

Impact, risk and opportunity management

[DR S2-1] **Policies related to value chain workers**

[S2-1.16] OMV Petrom has the following policies in place to address material impacts related to workers in the value chain:

- Code of Conduct

[MDR-P-65a] Human rights are universal and guide the company's conduct in every aspect of OMV Petrom Group's activities. Human rights are inalienable, and every person is inherently entitled to them. OMV Petrom is committed to respecting the human rights of all its stakeholders, including but not limited to employees, business partners, local communities, and consumers. The company strives to be one of the best companies to work for and to be a fair and responsible employer that promotes equal opportunities,

modern forms of employee development, and a positive and dynamic working environment. The company is committed to respecting human rights in its activities, direct surroundings, and in the wider society. The acceptance of OMV Petrom's Code of Conduct is a mandatory part of supplier pre-qualification and the General Purchasing Conditions. Through the implementation of its Code of Conduct, OMV Petrom aims to enhance its actual positive impacts related to fair payment practices, compliance with minimum human & labour rights and supplier engagement, pre-qualification, assessment and audits, and to prevent its potential negative impacts related to ineffectiveness in supplier engagement, pre-qualification, assessment, audits and safety hazards

[MDR-P-65 b-f] For more information, please see the Climate change chapter.

▶ Corporate Procurement Directive

[MDR-P-65a] The Directive outlines the key processes for supplier engagement and management, embedding human rights considerations in supplier pre-qualification, audits, and meetings. Through this Directive, OMV Petrom aims to enhance its actual positive impacts related to fair payment practices, compliance with minimum human & labour rights and supplier engagement, pre-qualification, assessment and audits, and to prevent its potential negative impacts related to ineffectiveness in supplier engagement, pre-qualification, assessment and audits. Biannual checks are implemented by Procurement Units "Governance and Analytics" and "Strategy and Digitalization", to monitor the implementation of the Procurement Directive.

[MDR-P-65 b-f] For more information, please refer to the G1 Business conduct chapter.

▶ Personnel Transportation Standard

[MDR-P-65a, b, c]. This regulation defines the minimum requirements to manage transportation of OMV personnel and contractors, including transportation by road, rail, air and marine. The purpose of the Standard is prevention of transportation incidents, injuries, fatalities and resulting financial costs to the company by defining minimum requirements and providing guidance on how to implement transportation safety best practice, in each operational area within the scope of the OMV Petrom safety management system in accordance with international and national law. Bridging documents are used to transfer the requirements to the company's contractors. Line managers are accountable for the implementation of this standard. The standard is communicated through internal channels such as the internal regulations platform, included in the training, and during the tendering process as part of the Minimum HSSE Requirements and Bridging Document in the contract execution phase [MDR-P-f].

▶ Contractor HSSE Management Standard

[MDR-P-65a].The standard sets the minimum requirements for integrating HSSE aspects throughout all phases of contract and contractor management. It outlines the roles and responsibilities in managing contractor HSSE performance, ensuring a systematic approach beyond local and national regulations. The goal is to engage contractors capable of managing HSSE risks effectively. The assessment's depth corresponds to the HSSE risk level of the contracted activities. Through the standard, the company aims to enhance its actual positive impacts related to compliance with minimum human & labour rights and supplier engagement, pre-qualification, assessment and audits, and to prevent its potential negative impacts related to ineffectiveness in supplier engagement, pre-qualification, assessment, audits and safety hazards.

[MDR-P-b, c]This standard applies to all contracted field service and capital project activities within OMV Petrom Group's business divisions and corporate functions, regardless of the procurement process type. It is primarily aimed at high and medium-risk activities but can also be applied to low-risk activities as deemed necessary. Exclusions include office-based consultation activities, material suppliers (unless assessed with high HSSE risk potential), and the chartering of barges and vessels, which are managed according to international standards. The Contract Owner is accountable for the HSSE performance of the contract and serves as the escalation point for unresolved supplier HSSE issues.

The standard is communicated through internal channels such as the internal regulations platform, including training, and during the tendering process as part of the Minimum HSSE Requirements and Bridging Document in the contract execution phase [MDR-P-f].

[S2-1.17a] OMV Petrom commits to upholding the highest standards of human rights and labour rights for all workers in its value chain, ensuring fair wages, safe working conditions, and the right to collective bargaining. The company has a Human Rights Due Diligence Process in place to identify human rights-related potential impacts, monitor the effectiveness of the actions in this area, and integrate and communicate the findings from this process.

[S2-1.17b] Engagement with workers in the value chain occurs in all stages of our business relationship and at all

levels of stakeholders (both management and on-site workers).

Some examples of this engagement are:

- Supplier audits and assessments
- Service Quality meetings
- HSSE Safety Walks
- HSSE Audits
- Human Rights spot checks
- Annual meetings with strategic suppliers and sustainability supplier day events.

[S2-1.17c] In line with its double materiality process (please refer to ESRS 2 - IRO-1) and the results of the assessment for the topic related to Workers in the value chain (please refer to S2 Material IRO table), OMV Petrom has not identified any material negative impacts related to human rights of workers in the value chain.

Nevertheless, the company updated its Human Rights policy following feedback from peer reviews, benchmarking agencies, ESG rating agencies, reporting standards and upcoming legal requirements. Key updates include the commitment to provide remedy to correct negative impact if identified. OMV Petrom regards grievance mechanisms as essential tools for preventing and managing negative impacts on local communities, employees, and other stakeholders, such as value chain workers. The company's Human Rights Due Diligence Process involves four key steps:

- Evaluating both current and potential human rights impacts linked to OMV Petrom's present and future business operations
- Integrating and acting upon the findings in the company's activities
- Monitoring the effectiveness of the company's actions
- Communicating on how these impacts are being addressed

[S2-1.18] OMV Petrom strongly opposes forced labor, slavery, child labor and human trafficking. To ensure its suppliers' support of OMV Petrom's human rights values and to mitigate the risk of forced labor, slavery and human trafficking, the company´s supply chain partners have to sign OMV Petrom´s Code of Conduct including the provisions on human rights as part of their contract.

OMV Petrom reserves the right to terminate the relationships with its suppliers, if issues of non-compliance with OMV Petrom´s Code of Conduct are discovered or non-compliance is not addressed in a timely manner.

[S2-1.AR-15] Contractors' HSSE management is regulated internally by the Group Standard Contractor HSSE Management. The Standard describes the HSSE management process throughout a contract's lifecycle and it is developed according to the best practice in Oil and Gas industry, specifically the IOGP Report 423 - "HSE management guidelines for working together in a contract environment". Also, contractors are requested to enforce similar HSSE selection and management protocols to their subcontractors and to support in this way the creation of a common HSSE culture among short- and long-term partners.

To mitigate supply chain risks, including forced labour, slavery, human trafficking, and corruption, OMV Petrom extends the legal requirements, internal rules, and standards applicable internally to its suppliers. They are required to fully comply with the content of the OMV Petrom Code of Conduct, and the company's supply chain partners are required to sign the OMV Petrom Code of Conduct. In addition, suppliers must accept the General Conditions of Purchase, which further detail OMV Petrom's business standards (e.g., labour rights), as an integral part of its contractual agreements. The Code of Conduct is fully in line with the applicable ILO standards.

[S2-1.19] The company updated its Human Rights policy following feedback from peer reviews, benchmarking agencies, ESG rating agencies, reporting standards and upcoming legal requirements.

OMV Petrom respects the Universal Declaration of Human Rights and international treaties like the International Labor Organization (ILO) core treaties (e.g., Freedom of Association and Protection of the Right to Organise Convention No. 87, Right to Organise and Collective Bargaining Convention No. 98, Forced Labour Convention No. 29, Abolition of Forced Labour Convention No. 105, Minimum Age Convention No. 138, Worst Forms of Child Labour Convention No. 182, Equal Remuneration Convention No. 100, Discrimination (Employment and Occupation) Convention, No. 111). Having signed the UN Global Compact, the company is fully committed to the UN Guiding Principles on Business and Human Rights and the OECD Guidelines for Multinational Enterprises.

In 2024 there were 0 cases of non-respect to international standards reported in OMV Petrom's value chain, involving issues such as human rights or labour rights violations.

[S2-1.AR-12] In 2024, OMV Petrom's Code of Conduct was updated to incorporate additional values and commitments. These changes aim to enhance accountability for both the

organization and its business partners in implementing responsible and sustainable business practices, as they will allow OMV Petrom to meet new expectations from suppliers and integrate recent legislative changes into its internal policies.

[DR S2-2] **Processes for engaging with value chain workers about impacts**

[S2-2.22, S2-2.22a] OMV Petrom regularly engages with value chain workers to gain insight into their perspectives.

[S2-2.22b] The company engages with these stakeholders as follows:

- Annually, through supplier audits and assessments;
- Quarterly, through Service Quality meetings;
- Annually, through forums and safety performance meetings with contractors;
- Annually, through HSSE Walks with contractors;
- Annually, through meetings with strategic suppliers and Sustainability Supplier Day events.

[S2-2.22c] The Head of HSSE (reporting directly to the CEO) and the Head of Procurement (reporting directly to the CFO) are the most senior roles within OMV Petrom that have operational responsibility for ensuring that engagement with value chain workers happens.

[S2-2.22d] OMV Petrom does not have Global Framework Agreements with global union federation with regards to value chain workers.

[S2-2.22e] OMV Petrom leverages on its 360 degrees evaluation, which is completed both by Petrom representatives and by the supplier, to understand if the regularity and the format of the supplier engagement methods that are used by OMV Petrom meet the expected requirements. The 2024 results of the 360 degree evaluations showed a generally widespread satisfaction regarding the engagement methods.

[S2-2.23] OMV Petrom gains insight into the perspective of workers that may be particularly vulnerable by identifying vulnerable groups and having in place feedback mechanisms through its grievance channels or Together for Sustainability (TfS) audits.

The company also undertakes HSSE Audits, including Human Rights specific evaluations, and on-site verifications for working conditions and compliance with the Law.

[DR S2-3] **Processes to remediate negative impacts and channels for value chain workers to raise concerns**

[S2-3.27a] The key tools for preventing and managing adverse impacts on OMV Petrom's stakeholders, including workers in the value chain, are the grievance mechanisms. Following the UN Effectiveness Criteria, the company aims to address all grievances received within 45 days of receipt, regardless of whether they stem from real or perceived issues and whether the complainant is identified or anonymous.

The company's mechanisms are designed to provide a comprehensive channel for identifying potential adverse impacts, resolving grievances, and offering remedies to rightsholders in instances where the company has caused or contributed to negative outcomes. OMV Petrom recognizes that does not hinder the internal and external stakeholders' (e.g. value chain workers) right to access judicial or other remedies.

Through the grievance mechanism, the company tracks and monitors issues raised. The company measures the number of grievances resolved through remediation, as well as the number of resolved grievances against the number of received ones. For more information regarding ensuring the effectiveness of this channel, refer to chapter Affected communities.

A grievance is defined as an expression of dissatisfaction stemming from a real or perceived impact of the company's business activities, communicated verbally or in writing, including local languages. They can be lodged by email, phone, through our community relations staff working locally and other locally dedicated channels, as well as at a corporate level. The grievances can be expressed anonymously, as well as on behalf of another individual. OMV Petrom does not seek retaliation against any stakeholder who lodges a grievance.

[S2-3.27b] In addition to the grievance mechanism through which workers in the value chain can raise their concerns, OMV Petrom performs regular TfS sustainability audits and assessments, as well as on-site HSSE compliance checks and audits.

For any issues related to corruption and bribery, cartels/unfair competition, capital market law, public procurement, environmental protection, product/food safety and consumer protection, corporate tax regulations, data protection, and for any other breaches of the Romanian law, workplace concerns, any stakeholder, including workers in the value chain, can submit a complaint via the anonymous

and confidential Integrity Platform. The platform is available to both OMV Petrom employees and external parties.

[S2-3.27c] OMV Petrom Group ensures grievance channels are available within its direct operations and through business relationships, by mandating grievance management as a requirement in contracts with partners, suppliers and contractors.

[S2-3.27d] The grievance mechanisms ensure the systematic receipt, investigation, documentation, addressing, and resolution of grievances across all operating countries in a timely, fair, and consistent manner, establishing the foundation for its social license to operate.

All grievances are promptly responded to within a specified time period, with complainants informed about the procedure, indicative time frame for each stage and progress.

The management of grievances aligns with the IPIECA best practice guidelines and with the Effectiveness Criteria of the UN Guiding Principles on Business and Human Rights, aiming for legitimacy, accessibility predictability, equity, transparency, rights-compatibility, continuous learning, and engagement and dialogue. OMV Petrom has set a target to assess the grievance mechanisms at all sites against the UN Effectiveness Criteria for Non-Judicial Grievance Mechanisms by 2025.

For more information regarding tracking and monitoring of the issues raised and addressed, and ensuring the effectiveness of the grievance channel, refer to Affected communities chapter.

[S2-3.28] In 2024 there was no action to assess awareness of the grievance mechanisms of value chain workers; however, OMV Petrom is considering implementing this in the future.

[S2-3.28] Whistleblowers are subject to special protection against retaliation (“whistleblower protection”) by OMV Petrom, as legally provided.

Retaliation comprises all actions or omissions in a work-related context that are a reaction to a report and because of which the whistleblower suffers or may suffer an unjustified detriment. This includes, in particular, detriments with regard to professional advancement, further training, income, or other professional development opportunities, such as dismissal, demotion, denial of promotion, negative performance appraisal, or disciplinary measures.

OMV Petrom’s internal Whistleblowing Directive stipulates the “no retaliation” policy aiming at protecting individuals who report misconducts in good faith and outline methods for employees and external workers to make confidential and anonymous whistleblower complaints.

[DR S2-4] **Actions**

[S2-4-31] OMV Petrom takes actions to address material negative and positive impacts related to workers in the value chain. The list of actions taken or planned by the company in this regard is presented below:

- Continuous monitoring of payment terms

[S2-4-32c, MDR-A-a,b,c] This action has been undertaken to advance the company’s positive impact regarding fair payment practices. The continuous monitoring helps ensure that the 60 days payment term is not exceeded. This is achieved through the SAP system through automatic payment proposal, for all invoices that are due, one day prior to expiry of the payment term (thus avoiding manual intervention). In case there are invoices blocked for payment (e.g., for tax considerations), the reasons are analyzed and remediation measures are initiated. The monitoring is carried out on a monthly basis and covers OMV Petrom’s contractors and suppliers.

[S2-4-32d, MDR-A-e] In terms of progress, in 2024, in OMV Petrom 93.2% of payments were aligned with the standard payment term of 60 days.

For more information regarding this action, please refer to the G1 Business conduct chapter.

- Supplier pre-qualification and adherence to Code of Conduct

[S2-4-32a, S2-4-32c, MDR-A-a] The acceptance of OMV Petrom’s Code of Conduct is a mandatory part of pre-qualification and the General Purchasing Conditions. This action has been undertaken to advance the company’s positive impacts regarding compliance with minimum human, labor rights & safety conditions and supplier engagement, pre-qualification, supplier assessment and audits and to prevent the negative impact related to ineffectiveness in supplier relationships management. The expected outcome is to ensure pre-qualification of those suppliers and contractors that meet the minimum HSSE and sustainability requirements.

[MDR-A-b, MDR-A-68c] The pre-qualification and acceptance of the Code of Conduct is mandatory for all

suppliers and contractors invited to tenders as of 2022. This action is undertaken continuously and progress on the implementation status is performed biannually through internal control system checks.

[S2-4-32d, MDR-A-68e] In terms of progress, in 2024, in OMV Petrom 112 new suppliers (vs. 212 in 2023) were screened for social criteria (e.g., child labor, forced labor, and collective bargaining) and environmental criteria. No suppliers were disqualified on environmental criteria, while 7% were disqualified on social criteria.

- Run supplier assessments through the EcoVadis platform provided by TfS and on-site or off-site audits with TfS or other external auditors.

[S2-4-32a, S2-4-32c. MDR-A-68a, d] This action has been undertaken to advance the company's positive impacts regarding compliance with minimum human, labor rights & safety conditions and supplier engagement, pre-qualification, supplier assessments and audits and to prevent the negative impact related to ineffectiveness in supplier relationships management. The purpose of the external supplier audits is to assess their performance on different dimensions, including sustainability and identify areas of improvements. TfS assessments (performed via EcoVadis platform) address areas such as health and safety, labour and human rights and sustainable procurement practices. The EcoVadis assessments are run through an online questionnaire. If the suppliers score below 45 points, they are required to improve their performance within one year and repeat the assessment. For corrective action plans resulting from the audits, suppliers must agree on a timeline to implement the necessary corrective actions.

By 2025, OMV Petrom aims to conduct sustainability evaluations (EcoVadis) and TfS audits for all suppliers covering 80% of procurement spend and, in addition, perform at least 20 audits with an external auditor for selected suppliers and contractors. By 2030, the sustainability evaluations (EcoVadis) and TfS audits will be extended to all suppliers covering 90% of procurement spend [MDR-A-68c, MDR-A-68b]. The progress of the external supplier audits is monitored on a quarterly basis, as for the TfS audits and EcoVadis assessments on a monthly basis.

[S2-4-32d, MDR-A-e] In terms of progress, in 2024, in OMV Petrom there were 24 supplier audits performed with external auditors (vs 16 in 2023), 2 TfS audits, 130 EcoVadis (re)assessments (vs. 53 in 2023) and a total of 162 suppliers with valid EcoVadis scorecards (no more than 3 years old).

- Improvement of subcontractor management with the implementation of a new online subcontractors' approval process (SAP BTP).

[S2-4-32a, S2-4-32c, MDR-A-68a] This action has been undertaken to advance the company's positive impacts regarding compliance with minimum human, labor rights & safety conditions and supplier engagement, pre-qualification, supplier assessments and audits and to prevent the negative impact related to ineffectiveness in supplier relationships management. The main expected outcome is to have a transparent overview of subcontractors approved to work for OMV Petrom for specific service contracts and to ensure the subcontractors meet OMV Petrom requirements in terms of HSSE, Compliance, Human Rights etc.

[MDR-A-b] Contractors have to submit all the subcontractors planned to be used for specific service contracts for approval in the SAP BTP application as of 2023. This action is undertaken continuously and checks are performed on a quarterly basis [MDR-A-c], and covers OMV Petrom's contractors and their subcontractors.

[S2-4-32d, MDR-A-68e] In terms of progress, in 2024, in OMV Petrom there were 550 subcontractors submitted for approval by our contractors via the SAP BTP database.

- Service quality meetings and HSSE Experience exchange meetings with HSSE, Contract Holders, Contract Owners, beneficiaries and peer reviews

[S2-4-32a, S2-4-32c, MDR-A-68a] These meetings are held to prevent safety hazards associated with the activities of upstream operations, for contractors on the company's sites. The expected outcome of the HSSE Experience exchange meetings and peer reviews include enhanced identification of improvement opportunities through internal analysis, feedback, and sharing of good practices regarding safe ways of working, lessons learnt regarding actual and potential safety incidents. By working together on improvements and monitoring contractual KPIs, OMV Petrom aims to measure performance effectively, analyze incidents, and utilize bridging documents to ensure continuous improvement in the scope of works. The Service quality meeting is structured to include topics such as: follow up on HSSE walks and audits conclusions, updates on contractors' workers' trainings, competences and human rights, updates on subcontractors' workers and planning of employees' qualification.

The meetings are organized on a quarterly basis [MDR-A-68c], and apply to contractors with HSSE relevance, which

includes those contractors with medium-high risk as per the Contractor Management Standard [MDR-A-68b].

[S2-4-32d, MDR-A-68e] In terms of progress, in 2024, OMV Petrom organized 15 Experience Exchange meetings.

- Joint HSSE Walks with contractors' management representatives

[S2-4-32a, S2-4-32c, MDR-A-a] This action has been undertaken to advance the company's positive impacts regarding compliance with minimum human, labor rights & safety conditions. The main expected outcome is to promote open dialogue with workers in the value chain and their management.

[MDR-A-b] The HSSE walks are undertaken in line with the HSSE Annual Plan and outcomes are further discussed in service quality meetings [MDR-A-c], and apply to contractors with HSSE relevance, which include those contractors with medium-high risk as per the Contractor Management Standard.

[S2-4-32d, MDR-A-e] In terms of progress, in 2024, OMV Petrom 8900 HSSE Walks were performed.

- Contractors Road Safety

[S2-4-32a, S2-4-32c] OMV Petrom organizes Transportation audits which aim at preventing the negative impacts related to safety hazards associated with transportation of contractors to the company's sites. These audits include the latest road safety requirements, including IVMS for the entire fleet, safety cameras for drivers, and ISO 39001 certification for four R&M contractors/haulers from Bulgaria and Moldova.

[MDR-A-a] The company also organizes the annual Road Safety Forum, now in its third edition, to facilitate the exchange of experiences, initiatives, best practices, and challenges in transportation safety.

[MDR-A-b, c] The audits are planned annually, and cover OMV Petrom's contractors.

[S2-4-32d] In terms of progress, in 2024, OMV Petrom, 46 HSSE MS audits at contractors working on OMV Petrom site were performed [MDR-A-e].

- Conduct HSE Contractors Onboarding

OMV Petrom aims to ensure the onboarding of key contractors and provide dedicated HSSE support during the ramp-up phase, aligning with strategic development objectives [MDR-A-68a]. This action is forward-looking, with the company planning to implement it in 2025 [MDR-A-68c], and covers OMV Petrom's contractors [MDR-A-68b].

- Forums with contractors

[S2-4-32a, S2-4-32c, MDR-A-a] OMV Petrom organizes regular forums with contractors aiming at sharing safety related day-to-days practices, challenges and lessons learnt, thus reinforcing the fundamental need of living the Life Saving Rules.

[MDR-A-b, c] The meetings are organized on a quarterly or bi-annual basis, and apply to contractors with HSSE relevance, which includes those contractors with medium-high risk as per the Contractor Management Standard.

[S2-4-32d] In terms of progress, in 2024, OMV Petrom performed 15 meetings with big contractors [MDR-A-e].

[S2-4-33a] In line with the double materiality assessment process (described in the General disclosures chapter, section IRO-1) and results related to Workers in the value chain, OMV Petrom identified two potential negative impacts on workers in the value chain.

The first potential negative impact is ineffective supplier engagement, pre-qualification, assessment, audits, Code of Conduct implementation which may lead to the risk of poor labour practices, as well as child labour, forced labour, human trafficking, or any other violation of human rights in the company's value chain.

For example, in the development of the Neptun Deep project, OMV Petrom is working with Saipem that will execute engineering, procurement, construction, installation and commissioning services (EPCIC). In this regard, human rights due diligence is a prudent step to identifying, preventing, mitigating potential impacts and risks to the workforce.

In 2024, as part of the pre-start assurance of the Saipem fabrications yards in Indonesia and Italy and the Saipem technology centre in Romania, we undertook on-site human rights spot-checks that focused on an increased attention to the labour rights, working conditions, health and safety in accordance with their human rights policy and codes of ethics and relevant national legislation. Key topics such as work authorisation, decent living wages, compulsory overtime, work hours, rest times, freedom and termination of employment, accommodation & living conditions, minimum age requirements, access to personal documents, collective

representation, trainings, whistleblowing channels were assessed and no significant concerns were identified.

The second potential negative impact is safety hazards associated with the activities of the upstream own operations, for contractors on OMV Petrom's sites, which has the potential to result in high-consequence work-related injuries.

OMV Petrom's Procurement department undertakes two types of audits that aim to measure and enhance supplier performance, so as to meet the company's requirements. These audits are carried out as part of the pre-awarding phase of the tender and/ or during contract execution. On-site Together for Sustainability audits, focus on the sustainability performance of a company. Off-site audits performed with external auditors analyse areas such as the financial stability of suppliers, their strategy and organization, supply chain, sustainability matters or cybersecurity. Audit findings classified with a red flag are followed up and analyzed by the Procurement team in collaboration with business representatives and other relevant functions. Information on the outcome of the audit is made available to the supplier, and the supplier is requested to submit a proposed corrective plan with concrete measures and an implementation timeline. In 2024, 4 audits resulted in follow-up measures.

[S2-4-33b] The actions previously identified help OMV Petrom to prevent its potential negative impacts on value chain workers.

In terms of supplier engagement and capacity building, in response to the identified potential negative impact of ineffective supplier engagement, OMV Petrom works together with its suppliers to enhance their understanding and compliance with sustainability requirements. In 2024, individual meetings and webinars were offered to suppliers to help them better understand the climate change questionnaire and the TfS (Taskforce for Sustainability) assessment. These sessions emphasized the importance of sustainability information to OMV Petrom. Sustainable and low-carbon procurement topics were also included in the agenda of annual strategic supplier meetings. The TfS program, based on the principles of the UN Global Compact and Responsible Care®, helps OMV Petrom integrate sustainability into its daily operations and extend these requirements throughout our supply chain.

In line with the actions identified to mitigate safety hazards associated with upstream operations, OMV Petrom uses its HSSE Management System to verify contractors' performance against pre-award expectations, ensuring compliance with legal and internal HSSE requirements. Post-audit, the company monitors the development of action plans and improvements and best practices to the eliminate risks to humans, the environment, and assets. Site visits, known as Walk Arounds or Inspections, are conducted together with on-site workers to analyse compliance with Life Saving Rules and the implementation of Permit to Work, identifying improvements collaboratively.

For the full list of actions undertaken by OMV Petrom in response to its negative impacts related to value chain workers and their expected outcomes, refer to the list of actions described above this chapter.

[S2-4-33c] OMV Petrom leverages on its grievance mechanisms to provide and enable remedy for negative impacts on its stakeholders, including workers in the value chain. The company tracks and monitors the number of grievances registered and resolved, including through remediation. As part of the Human Rights Due Diligence Process, the effectiveness and the progress of OMV Petrom's response to such issues are monitored and communicated.

For more information regarding the process to enable remedy and ensuring the effectiveness of the grievance channel, refer to Own workforce chapter.

[S2-4-34a, b] In line with the double materiality assessment process (described in the General disclosures chapter, section IRO-1) and results related to Workers in the value chain, OMV Petrom has not identified material risks and opportunities associated with Workers in the value chain.

[S2-4-35] Supplier prequalification is part of precontractual activities, during which OMV Petrom collects information from a potential supplier with the purpose of evaluating compliance with HSSE and sustainability requirements. The goal of the prequalification process is to screen potential suppliers before bringing them onboard to ensure that only those suppliers that meet HSSE and sustainability standards can be considered for future collaboration.

The prequalification is based on a standardized list of elements and objectives that aligns with the OMV Petrom HSSE Management System (e.g., HSSE Policy, ISO 9001, 14001, 45001) and sustainability objectives (e.g., Sustainability Policy, Human Rights Policy, and Grievance Mechanisms).

For more information regarding the audits performed by OMV Petrom with regards to its suppliers and contractors, refer to the "Actions" section within this chapter.

[S2-4-36] No severe human rights issues and incidents have been reported in the value chain in 2024.

[S2-4-38] Since 2022, the Sustainable Procurement and Supplier Innovation Department organizes webinars and training sessions with the aim to increase awareness on sustainability for the value chain workers. Also, when a supplier is invited to complete an EcoVadis assessment, it gains access to an e-learning platform containing a catalogue of courses on sustainable business practices (including labour practices and human rights). Furthermore, suppliers can also register to the TfS Academy platform, where a variety of courses are available on topics like discrimination and harassment, human trafficking, modern slavery, child labour, recognizing and preventing forced labour etc. OMV Petrom's own employees also receive training on value chain workers' rights through programs like mandatory Human Rights e-Learning or additional tailored classroom training modules.

In 2023, OMV Petrom introduced a new initiative for developing Life Saving Rules Training Centres. 6 out of 8 locations were finalized in 2024. In 2024, Following the "Train the trainers" principle, contractors' representatives received practical application and examples to ensure compliance with each of the nine OMV Petrom Life Saving Rules in order to further roll-out these sessions to the larger population of contractors' workers. This is part of our commitment to support our contractors in reaching similar levels of safety culture maturity.

Metrics and targets

[DR S2-5] **Targets related to workers in the value chain**

[S2-5-41] OMV Petrom has set targets to address material impacts on workers in the value chain. These are presented below:

Target	Progress 2024
All new suppliers screened against mandatory ESG criteria during supplier pre-qualification prior sourcing projects (baseline 2022)	112
Achieve Zero Work – Related Fatalities	0

- All new suppliers screened against mandatory ESG criteria during supplier pre-qualification prior sourcing projects.

[MDR-T-80a] Supplier prequalification is part of pre-contractual activities during which OMV Petrom gathers information from a potential supplier in order to assess their compliance with our HSSE and other sustainability requirements. In line with the Corporate Procurement Directive and the Contractor HSSE Management Standard (Annex 2 HSSE Pre-Qualification), OMV Petrom aims to screen all new suppliers against mandatory ESG criteria during pre-qualification, so as to ensure that only those suppliers who meet our HSSE and Sustainability standards can be considered for further collaboration.

[MDR-T-80b, c] This is an absolute target, measured by the number of new suppliers screened in SAP during the pre-qualification phase, during the reporting period. It applies to the upstream value chain across the entire OMV Petrom Group.

[MDR-T-80d, e] The target was first introduced in 2022. No baseline value was set as this target applies yearly, and the target periods are set for 2030.

[MDR-T-80f] The prequalification process is based on a standardized list of elements and objectives that aligns with the OMV Petrom's HSSE Management System (e.g., HSSE Policy, ISO 9001, 14001, 45001) and our Sustainability Framework (e.g., Sustainability Policy, Human Rights Policy, and Grievance Mechanisms).

[MDR-T-80h, i] Only internal stakeholders were involved in defining this target. No changes in the target and corresponding metrics or underlying measurement methodologies, significant assumptions, limitations, sources and processes to collect data have been undertaken during the reporting period.

[MDR-T-80j] In 2024, in OMV Petrom 112 new suppliers were screened against mandatory ESG criteria (HSSE and sustainability requirements). The target is reviewed annually, to check the effectiveness of measures and make adjustments as needed. Progress for 2024 is in line with the target that was set.

- Achieve zero work-related fatalities: This target covers own employees, contractors and third parties.

[MDR-T a-j]: For details on the target, please see Own workforce chapter.

[S2-5-42] OMV Petrom engaged both internal stakeholders (e.g., EB members, Sustainability sub-department) and external stakeholders (i.e., TfS organization, CDP organization) in the target-setting process to ensure the targets are realistic and aligned with their needs. The involvement was facilitated through various channels, including meetings and peers' analysis. The company periodically reviews and adjusts the targets if needed, documenting and reporting on the entire process to maintain transparency and trust.

Additionally, engagement for target-setting has been ensured through:

- HSSE Walk arounds, audits and inspections, fostering open dialogue and encouraging workers to disclose their safety-related concerns
- Quarterly meetings with key contractors under the Initiative Partners for a safer Future, aimed at improvement through common initiatives and working groups
- Biannual HSSE forum with Contract Holders
- Providing contractors access to Safety Centres, where practical LSR trainings are delivered to their employees

From these dialogues and communication channels, OMV Petrom has gained an understanding of the importance of proper onboarding for contractors to ensure a unified risk management approach. Consequently, this objective was incorporated into the HSSE Strategy, and efforts are underway to identify the proper KPIs for measurement.

[S2-5-42b] Performance against targets is monitored quarterly, within the Safety Taskforce meetings.

[S2-5-42c] Continuous performance monitoring in 2024 indicated no need for additional improvement of the performance targets.

[ESRS 2 MDR-M] **Metrics related to workers in the value chain**

[ESRS 2 MDR-M.75] OMV Petrom uses the following metrics to evaluate performance and effectiveness in relation to its impacts on value chain workers, which are disclosed in relation to the targets presented above:

Metric 1: The Number of supplier audits with external auditor, through which the company evaluates its performance in relation to the impacts related to supplier engagement, pre-qualification, assessment and audits: 24 audits conducted.

Metric 2: TfS related metrics through which the company evaluates its performance in relation to the impacts related to suppliers' compliance with minimum human & labor rights standards, supplier engagement, pre-qualification, assessments and audits:

- number of TfS (Re)Assessments performed via EcoVadis: 130
- number of suppliers with a valid EcoVadis score (no more than 3 years old): 162
- number of new suppliers screened for social criteria (e.g., child labor, forced labor, and collective bargaining) and environmental criteria: 112
- number of TfS audits performed: 2

[ESRS 2 MDR-M.77a] For Metric 1, which encompasses the number of supplier audits performed with an external auditor, OMV Petrom collects the audit reports that are finalized on an ongoing basis. There is no calculation related to this metric, the number of audits performed with an external auditor is measured at the end of the year, with quarterly checks for implementations status.

Nota bene: An audit is considered completed once an audit report delivered by the external auditor is accepted by Procurement, and services delivered are invoiced.

For Metric 2, which refers to the TfS commitments, TfS audit reports are collected by OMV Petrom via OASIS platform, whereas the data pertaining to the metrics regarding TfS assessments is collected from Tableau platform (both platforms are provided by TfS). OMV Petrom receives a separate report from the TfS team and double checks if the information in Tableau and Oasis fits to the info received from TfS team. So far, no deviations were identified.

[ESRS 2 MDR-M.77b] For TfS metrics, the external validation body is TfS organization. For the other metrics there is no validation from an external body.

Health and safety metrics[1]

	M.U.	2024	2023
Number of hours worked	mn	41	45
Number of fatalities as result of work-related injuries	Number	0	1
Lost-Time Injury Rate (LTIR)	Rate (per 1 mn hours worked)	0.32	0.37
Number of recordable work-related accidents	Number	17	22
Rate of recordable work-related accidents/ Total Recordable Injury Rate (TRIR)	Rate (per 1 mn hours worked)	0.42	0.48
Number of days lost to work-related injuries	Number	709	956

[1]Includes contractor data for OMV Petrom Group and OMV Petrom Global Solutions S.R.L. (Romanian entity accounted using equity method), in line with internal procedures.

[MDR-M 77 a,b,c] All Health and Safety metrics for contractors are calculated using same methodologies, assumptions and systems (see Own workforce chapter, DR S1-14 for Health and Safety metrics and related methodologies). For hours worked, contractor hours worked should include all hours worked by contractor personnel on company premises and all work-related activities.

Affected communities

At OMV Petrom, the commitment to transitioning to a lower carbon future is intertwined with a dedication to working closely with local communities to mitigate or prevent direct or indirect impacts of the company's operations, while maintaining our social license to operate. By prioritizing local issues, accounting for regional variances, and taking the necessary steps to guarantee long-term, sustainable development, OMV Petrom ensures that the path to a lower carbon future is both environmentally and socially responsible. Furthermore, OMV Petrom aims to make a positive impact on communities by being open to their needs, responding to their concerns, and promoting their long-term progress. This approach not only fosters local support and collaboration but also aligns with the broader goal of achieving a sustainable and inclusive energy transition.

Sub-topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies

Communities' economic, social and cultural rights	Process safety incident that could result in spills	Pot	Negative impact	OO	▶ Please refer to the Pollution and Process safety chapters for information regarding OMV Petrom's specific policies regarding process safety

OO Own Operations

Strategy

[SBM-3 S3] **Material impacts, risks and opportunities and their interaction with strategy and business model**

[S3-SBM 3.8] OMV Petrom recognizes that its strategy and business model could impact the communities where it operates. The company's social license to operate is founded on upholding human and labor rights and fostering positive relationships with surrounding communities.

The company acknowledges both positive and negative material impacts, which contribute to adapting the company's strategy. In particular, OMV Petrom strengthens its commitment to respecting and fulfilling human rights in its immediate surroundings as well as in the wider society, while avoiding or mitigating any risks that may arise from project-related activities.

In addition to shaping OMV Petrom's strategic commitment towards communities, the company's impacts inform how each Business Division tailors its community engagement and initiatives, in line also with its business plans, so that specific local needs are addressed and the respect of human rights is upheld.

[S3-SBM 3.9a] The following communities are subject to OMV Petrom's material impacts:

Local communities (which includes residents in areas adjacent to OMV Petrom's sites, refinery and pipeline routes, directly impacted by the company's operations);

Communities alongside the company's upstream supply chain.

For an overview of OMV Petrom's value chain, showing where its key material sustainability impacts, risks and opportunities occur across the company's full value chain, please refer to the General disclosures chapter.

OMV Petrom has identified three material negative impacts on affected communities, displayed at the beginning of this chapter.

[S3-SBM 3.9b] Community dependence on OMV Petrom

OMV Petrom is aware of the dependence of local suppliers and community members on its operations and products. More specifically, social and economic impacts could include job loss and impacts on livelihoods, while a lack of relevant skills, knowledge, or accessible training programs could affect community economic health and overall quality of life. The implementation of OMV Petrom's Strategy 2030, with a strong commitment to the energy transition, will also bring a transformation to the jobs it offers, many of which employ people from the company's local communities. The impact is limited to the operational areas in which OMV Petrom operates, and from which the company employs members of the communities.

Noise and disturbance of surrounding communities

Due to the profile of the industry in which it operates, OMV Petrom's supply chain and logistics can impact local communities through traffic congestion, noise and disturbance for communities where it operates. The impact is widespread, given the fact that the company's suppliers operate over a large geographic area.

Process safety incidents

Process Safety Management (PSM) remains a crucial focus for the company. A process safety incident that would result in spills could impact communities' health, safety, quality of life and the environment). OMV Petrom is committed to mitigating this potential impact through prevention measures. The impact is related to potential individual incidents.

For more information regarding the company's Process Safety Management, please refer to the Process safety chapter.

[S3-SBM 3.9c] With regards to material positive impacts on affected communities, OMV Petrom has identified the following impact:

Creation of opportunities for communities around suppliers and own operations

OMV Petrom significantly contributes to the economic and social wellbeing of the communities through local employment, local taxes, other payments to local governments, local procurement and community development programs.

OMV Petrom's engagement in local and national initiatives across education, health, and environmental sectors results in significant positive impacts for various communities in Romania. Our community investment projects are prioritized, planned, and managed in partnership with local stakeholders and the budget is allocated yearly.

For more information, see the "Material impacts, risks and opportunities related to Affected Communities section of this chapter.

[S3-SBM 3.9d; 3.11] OMV Petrom has not identified material risks and opportunities arising from impacts and dependencies on affected communities, following its double materiality assessment.

The Community Relations and Community Development Handbook outlines the management processes that OMV Petrom Group entities must follow to maintain their social license to operate. Through comprehensive community stakeholder analysis, management can identify and understand the communities whose interests or rights are affected by, or who can influence the company's development and operational activities in specific projects or operations. This analysis acknowledges the interests of key community stakeholders, including vulnerable groups. OMV Petrom addresses the needs of vulnerable groups within targeted communities, such as women, children, people with special needs, minorities, and migrants. In alignment with the International Standards, OMV Petrom considers the groups previously listed as groups which could be in vulnerable situations, such as those that could be physically or economically isolated, or that have health vulnerabilities, or having limited access to social services and therefore rely on infrastructure set up by OMV Petrom.

[S3-SBM 3.10] The company collaborates with local and national NGOs through various social investment projects and sponsorships, to gain insights into the specific vulnerabilities of these groups. Additionally, OMV Petrom's

stakeholder dialogue and grievance mechanisms enable the collection of direct feedback from communities, ensuring that the concerns of all members, including vulnerable groups, are heard and addressed effectively.

For more details, please refer to the section Actions of this chapter.

Impact, Risk and Opportunity Management

[DR S3-1] **Policies**

[S3-1.14] OMV Petrom has in place the following policies to address material impacts on affected communities:

- Code of Conduct

[MDR-P-65a] According to our Code of Conduct, the nature of our operations means that we have an impact on the local communities in which we operate. Our aim is to establish and maintain good relations with our stakeholders. Many of our business activities are visible to local people and to some extent will intrude on their communities. OMV Petrom implements community development projects that contribute to the local needs and UN SDGs. OMV Petrom values the contribution of the employees who support them on a voluntary base. In 2024, we updated our Code of Conduct and included more specific commitments regarding the impacts on communities, stemming for run responsible operations (e.g. we are committed to implementing loss prevention and control measures to avoid water and soil pollution, by following regulatory frameworks and industry best practice. Any spill shall be cleaned up promptly and immediate assessment shall be done to prevent further occurrence, foster people and communities (e.g. we aim to build capacity in order to support local development.).

[MDR-P 65b-f] For more details, please refer to the E1 Climate change chapter.

- Social Investments Standard

[MDR-P 65a, b, c, d] The Social Investments Standard is aimed at advancing the company's positive impact related to creating opportunities for communities around suppliers and own operations, and at preventing the negative impacts on community dependence on OMV Petrom. The Social Investments Standard ensures transparency in the effective use of financial resources allocated for sponsorships, both monetary and in-kind. It provides clear guidance over the process through which OMV Petrom gets involved with the communities where it currently operates, plans to develop or intends to conduct future activities. The Social Investments Standard's implementation is overseen by the Head of Communication & Sustainability, and through its implementation, the company is committed to respect the United Nations' Sustainable Development Goals. This standard applies OMV Petrom SA and its fully consolidated subsidiaries as well as OMV Petrom Global Solutions S.R.L.

[MDR-P-65e, f] OMV Petrom engages with relevant internal stakeholder groups in order to understand their expectations in relation to the company when defining policies. The Social Investment Standard is available on the company's internal regulatory platform.

- Community Grievance Mechanism

[MDR-P-65a] The mechanism is aimed at advancing the company's positive impact related to creating opportunities for communities around suppliers and own operations, and at preventing the negative impacts on community dependence on OMV Petrom and noise and disturbance of surrounding communities. The Grievance Management Process at OMV Petrom Group is integrated in the Compliance Management System, which ensures compliance with applicable legal provisions and internal regulations. This aims to increase the efficiency and effectiveness of our dialogue with stakeholders and communities in particular and to reduce non-compliance risks and financial consequences for the company.

[MDR-P 65b]The Community Grievance Mechanism is applicable across the OMV Petrom Group and its consolidated subsidiaries, including the associated company, OMV Petrom Global Solutions SRL and all their employees

[MDR-P 65c] The Head of Compliance oversees the implementation of the Compliance Management System and, implicitly, of the Community Grievance Mechanism.

[MDR-P 65d] Through the mechanism, OMV Petrom aims to respect the United Nations Guiding Principles on Business and Human Rights.

[MDR-P-65e]. The process for setting up the system is informed by multiple internal stakeholders and their expectations in relation to the company.

[MDR-P-65f] The Community Grievance Mechanism Standard is accessible through the company's internal regulatory platform, while details about channels are available on our corporate website.

[S3-1.15, S3-2.23] OMV Petrom Group does not operate in areas with indigenous populations; as such, the company

does not have impacts on indigenous peoples and has no particular policy provisions for preventing and addressing such impacts, and does not have a stakeholder approach regarding these populations.

▶ Human Rights Policy Statement

[MDR-P-a] OMV Petrom's Human Rights Policy Statement outlines the company's commitment to upholding human rights across its business operations and supply chain. The Policy is aimed at advancing the company's positive impact related to creating opportunities for communities around suppliers and own operations, and at preventing the negative impacts of community dependence on OMV Petrom. This commitment is a guiding principle for handling human rights issues in daily business activities, encompassing specific obligations like workers' rights, protective measures, vulnerable groups, environmental and climate change effects. The policy also details the company's due diligence process, grievance management, awareness, and communication strategies. The Policy Statement is applicable across the OMV Petrom Group, its consolidated subsidiaries and its supply chain and it is accessible through the company's internal regulatory platform and our corporate website.

[MDR-P 65b-f] For more information, please see Climate change chapter.

[S3-1.16a] OMV Petrom is committed to equality, irrespective of factors such as race, gender, sexual identity, age, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, indigenous origin, property, family status, disability, health status (including mental health), or any other status.

[S3-1.16b] The company maintains regular dialogues with legitimate representatives from local communities with whom OMV Petrom interacts and whom the company regards as crucial partners in achieving its objectives.

[S3-1.16c] OMV Petrom aims to provide remedy to correct negative impacts on the affected communities. Recognizing grievance mechanisms as vital tools for identifying and managing negative impacts on local communities, employees, and other stakeholders, the company ensures that its grievance mechanism addresses various categories of impacts including human rights. OMV Petrom aims to resolve all grievances in accordance with the UN Effectiveness Criteria.

[S3-1.17] OMV Petrom respects the Universal Declaration of Human Rights and international treaties like the International Labor Organization (ILO) core treaties (e.g., Freedom of Association and Protection of the Right to Organise Convention No. 87, Right to Organise and Collective Bargaining Convention No. 98, Forced Labour Convention No. 29, Abolition of Forced Labour Convention No. 105, Minimum Age Convention No. 138, Worst Forms of Child Labour Convention No. 182, Equal Remuneration Convention No. 100, Discrimination -Employment and Occupation- Convention, No. 111). Having signed the UN Global Compact, the company is fully committed to the UN Guiding Principles on Business and Human Rights and the OECD Guidelines for Multinational Enterprises.

The company is committed to upholding salient human rights and expects its employees and business partners to adhere to the same principles. Based on audits performed, no non-compliance cases were identified.

[S3-1.AR9] There have been no changes to the policies pertaining to affected communities, or to OMV Petrom's approach to engagement, due diligence and remedy processes compared to the previous year, with the exception of the Social Investments Standard which was adopted in 2024. The changes were necessary to increase integration of our social involvement projects and to better respond to communities' needs. The contents of this standard are described in the beginning of the Policies section of this chapter.

[S3-2] **Engaging with affected communities**

[S3-2.21a] OMV Petrom engages directly with various stakeholders, including authorities, members of the public, or local NGOs from the communities where it operates. Recognizing these community members as vital partners in achieving its objectives, the company maintains regular dialogues to ensure their voices and concerns are heard and addressed. We conducted consultation with potentially affected communities in all our E&P Assets during various phases of the business projects (e.g. submitting the request for issuing the environmental permit). Another example is the consultation procedures for the Environmental Permit of our Neptun Deep project, which took place in Tuzla, Romania, and Varna, Bulgaria, in early 2024.

[S3-2.21b] The engagement continues throughout the project lifecycle – during commissioning, operational phases, decommissioning, and even abandonment – to guarantee that community viewpoints are consistently considered and addressed.

The community and social investments of OMV Petrom are informed by the needs identified through ongoing community engagement processes. Annually, the company prioritizes collaborative projects with local stakeholders, aiming to optimize the social return on its investments.

[S3-2.21c] At OMV Petrom, the responsibility for ensuring engagement with local communities and stakeholders is entrusted to the business divisions. The Sustainability corporate function oversees the implementation of community relations and development plans, as well as ensuring regular collection and review of stakeholder reports and feedback, and monitors the implementation of Group guidelines, policies, and regulations. The highest function responsible for the engagement are Business Heads, this can be General Managers, VPs or Asset Managers.

[S3-2.21d] Regular, organized alignment sessions are conducted with community development professionals to oversee and guide the local implementation of site-specific community relations and development strategies, plans and projects. Effectiveness is ensured through the collection and review of reports and feedback on the implemented projects, which further informs the company’s community development plans.

[S3-2.22] OMV Petrom uses several methods to identify and understand the perspectives of communities whose interests or rights are affected by, or who can influence, the company's development and operational activities, including particularly vulnerable and marginalized groups.

To gain insight into the perspectives of these vulnerable groups within targeted communities, such as women, children, people with special needs, minorities, and migrants OMV Petrom takes the following steps:

- Stakeholder Dialogue to understand their concerns and needs;
- Collaboration with NGOs through various social projects, sponsorships, and donations to gain further valuable insights into the specific vulnerabilities and perspectives of these groups. Project reports received from implementing NGOs include feedback from beneficiaries;
- Grievance Mechanisms to ensure that the concerns of all community members, including those of vulnerable groups, are heard and addressed effectively.

For information regarding how the company gains insight into the perspectives of vulnerable communities, please refer to the Our approach to community relations section of this chapter.

[S3-3] **Remediation and channels to raise concerns**

[S3-3.27a] OMV Petrom aims to provide remedy through its Grievance Mechanism, which is integrated into the Compliance Management System. This approach is meant to enhance the efficiency and effectiveness of dialogue with stakeholders and communities, enabling remedies where needed and reducing non-compliance risks and financial consequences for the company. The Grievance Mechanism is designed to be transparent, credible, and equitable, fostering trust and advancing OMV Petrom's social performance in community relations.

The Grievance Mechanism process is described below:

- Receiving and registering the grievances
- Managing the grievances:
- Identify the requirements;
- Review the grievance;
- Register the grievance in the database;
- Document the grievance, based on the documents received and with the support of the existing databases in the company;
- Field visits, if necessary, in order to clarify the issues;
- Prepare the Field findings Protocol or the Protocol for granting compensations for the damages caused, if the case. If, following the findings in the field, the petitioner gives up his requests, it is mandatory to stipulate this information in the Protocol, under the signature of both parties in two copies with one copy to the petitioner;
- Distribute to other Departments, with the notification of the Organizational Unit Manager, to obtain necessary information / documents as to formulate the response;
- Request additional information and / or documents from the petitioner;
- Propose the response to the petitioner and the corrective measures, together with the activity responsibles in whose competence the issues reported by the petitioner fall;
- Formulate the response to the petitioner, secure the signature and sent to petitioner, in accordance with the applicable internal rules;
- Register in the database of the response and supporting documents, if any;
- Follow-up of the implementation of corrective measures by the activity responsible in whose competence the issues reported by the petitioner fall;
- Reporting on grievance status and resolution (through reports obtained from the database weekly, monthly, annually).

The effectiveness of the provided remedies is assessed by evaluating the resolution of issues and ensuring timely communication of outcomes to the concerned parties.

[S3-3.27b] OMV Petrom receives grievances from affected communities which can be submitted personally by the petitioner or his representative; by courier or standards/registered post; by fax; by e-mail; by phone, at company's toll free phone numbers; by any company's social media platforms. The Petrobrazi Refinery operates its dedicated channel, where any community member can address any question or complaint by phone or by email. This channel is promoted regularly, especially around periods of major activity within the refinery.

[S3-3.27c] OMV Petrom Group ensures the availability of grievance channels both within its direct operations and through its business relationships. This is achieved by including the management of grievances as a contractual requirement for partners, suppliers, and contractors.

[S3-3.27d] OMV Petrom employs a systematic approach to tracking and monitoring issues raised through its grievance mechanisms. The company maintains a detailed record of all grievances, which allows for:

- Registering the number of grievances by category
- Measuring the number of received grievances versus the number of resolved grievances
- Measuring the number of grievances resolved through remediation

In 2024, we registered a total of 602 grievances related to society, human rights and environmental issues, 374 of the grievances were related to social impacts generated by the operations and 228 grievances were related to environmental impacts. 522 were resolved, out of which 203 through remediation.

Each grievance is thoroughly investigated and addressed in a non-judicial manner, ensuring that community members have access to appropriate remedies tailored to the specifics of their case. The Compliance Department conducts regular audits of the grievance database to verify the accuracy of the data and to make recommendations for enhancements where necessary. This monitoring is essential to ensure that grievances are resolved in a timely and effective manner.

Additionally, OMV Petrom assesses the effectiveness of its grievance mechanism by evaluating the resolution outcomes and the satisfaction of the stakeholders involved. This evaluation helps the company to continuously improve its processes and ensure that its channels remain accessible, responsive, and effective in addressing the concerns of the communities it engages with.

[S3-3.28] To ensure that affected communities are not only aware of OMV Petrom's grievance processes but also trust in their effectiveness, the company monitors the number and types of grievances submitted. By analyzing the ratio of received grievances to resolved grievances, OMV Petrom gains insights into the reliability of its process. Additionally, tracking the number of resolved grievances serves as an indicator of the process's effectiveness in providing remediation. This close monitoring of grievances is communicated to the stakeholders involved, ensuring transparency and accountability.

[S3-3.28] In accordance with the EU Whistleblowing Directive and its relevant topics, including but not limited to corruption and bribery, conflicts of interest, competition law, and capital markets law, OMV Petrom has developed an internal Whistleblowing Directive. This directive stipulates a "no retaliation" policy aimed at protecting individuals who report misconduct in good faith and outlines methods for stakeholders, including members of affected communities, to make confidential and anonymous whistleblower complaints. The Whistleblowing Directive also ensures that reports or incidents are investigated by Compliance Department.

Additionally, OMV Petrom's Grievances Management Standard emphasizes that information, including reasonable suspicions, regarding actual or potential violations of the law, which have occurred or are likely to occur within the company and are reported internally or externally (through written or oral communication), shall be treated in accordance with the provisions of Law 361/2022 on the protection of whistleblowers in the public interest.

[S3-4] **Actions**

[S3-4-31, S3-4-38] OMV Petrom is dedicated to addressing the needs of all local communities in which it operates, strategically allocating actions and resources to ensure that over 80% of these communities benefit from its social responsibility programs. In 2024, OMV Petrom invested about RON 131 mn in such initiatives.

OMV Petrom initiates actions to prevent and mitigate negative impacts and advance positive impacts on affected communities. The specific actions linked to the actual positive impact of creating opportunities for communities around suppliers and own operations and for mitigating the potential negative impact related to community dependence on OMV Petrom are part of the company’s Social Investments Annual Plan (which includes working with local

and national NGOs) and target three key areas: education, health and environment. The coverage of these actions spans across OMV Petrom's own operations, and they are annual.

▶ Education

The "Start in education" program, coordinated annually by the OMV Petrom Foundation and World Vision Romania, which aims to offer educational support to disadvantaged communities, reached 60,000 children (3-6 years old), 11,200 parents, 3,700 educators and 1,500 kindergartens with a total amount of RON 21 mn. The interventions were implemented in over 2,290 disadvantaged communities in 41 counties, having a nation-wide scope. Through the " Let's be friends - No bullying " program, the OMV Petrom Foundation and Save the Children Romania contributed to the psycho-emotional development of 8,800 children aged 3 to 6 from 79 kindergartens in 8 counties and Bucharest. Also, over 600 teachers acquired the necessary skills to implement the Free of bullying methodology in the classroom, and over 8,800 parents were informed about positive educational methods. The investment in this project was of 841,000 RON.

The "Prahova Education Fund", coordinated annually by the Prahova Community Foundation, supported 12 community projects (through digital infrastructure, STEAM or sports activities and which aim to develop the skills of children, young people, adults from vulnerable groups) with a total amount of RON 2 mn. The action cover the Prahova county.

▶ Health

Access to medical care is an important basic need that OMV Petrom aims to support, covering local rural communities in Romania. The "Sănătate în vecinătate" program, run by the Medcorp Association and supported by OMV Petrom with RON 8 mn in 2024, continued to provide medical services for over 5,000 beneficiaries.

In 2024, OMV Petrom invested RON 8 mn to continue the partnership with HOSPICE Casa Speranței Foundation. Over 500 children and 1,000 relatives will benefit in 2025 from the palliative care services offered by the foundation. The care services covered beneficiaries across Romania.

OMV Petrom Foundation coordinated projects that address neonatal and prenatal care, ensuring better care and a healthier start for the next generation. The "Baby Box" program implemented together with Save the Children Romania and SAMAS spans 1,300 nation-wide communities, with a significant investment of RON 20 mn in 2024, providing critical support to more than 15,300 mothers and newborns. Through the "First Step to Health" program, the OMV Petrom Foundation and Save the Children Romania expanded access to medical services for 22,000 pregnant women, mothers and children nationwide and equipped another 60 general practitioners' facilities with medical equipment with a total investment of RON 5 mn in 2024. Through the "Together from the first day" program, the OMV Petrom Foundation and Save the Children Romania equipped 16 additional medical units reaching a total of 60 medical units with state-of-the-art medical equipment for monitoring the health of newborns with a total investment of RON 8 mn in 2024.

▶ Environment

In 2024, OMV Petrom and Energy Policy Group (EPG) announced the completion of the third educational unit in the country upgraded to the nZEB standard - nearly zero-emission building, as part of the "România Eficientă" program. The budget for upgrading the building amounted to RON 7,5 mn.

Through the "Romania plants for tomorrow" annual program OMV Petrom planted 11 urban and rural forests. The company invested mn 16 RON to plant 600,000 saplings across the whole country with the help of Mai Mult Verde, Act for Tomorrow, Asociația Parcul Natural Văcărești, Pădurea Copiilor, Plantăm Fapte Bune în România and Adoptă un Copac.

Through "The Green for the Future" program the OMV Petrom Foundation financed the Vânători Neamț Natural Park (PNVNT) with RON 4 mn in order to become a national role model for biodiversity conservation and the development of the ecotourism destination concept.

In order to mitigate the potential negative impact related to noise and disturbance of surrounding communities, OMV Petrom has undertaken the following specific actions:

- Continuous optimization of routes in order to deliver the company's products in the most efficient way [MDR-A-a]. This action covers communities surrounding OMV Petrom's operations and across its value chain [MDR-A-b], and is undertaken continuously [MDR-A-c].
- Clauses related to fleet age with direct impact in minimization of emissions and additional requirements for tyre management processes to ensure road safety and reduced noise emissions [MDR-A-a]. This action covers communities surrounding OMV Petrom's operations [MDR-A-b], and is undertaken annually [MDR-A-c].

[S3-4-32a] For information regarding the actions undertaken by OMV Petrom to prevent the potential negative impact related to process safety incidents, please refer to the Pollution and Process safety chapters.

[S3-4-32c] OMV Petrom's actions and initiatives in place to deliver positive impacts for affected communities are reported above in the "Key actions" section of this chapter.

[S3-4-32d] To evaluate the effectiveness of its actions and initiatives, OMV Petrom utilizes a range of quantitative metrics, including the total investment amount, the number of projects implemented, and the number of beneficiaries reached. This comprehensive system provides a clear picture of the scope and reach of the company's initiatives. It is designed to measure both the immediate outcomes and the long-term impact of OMV Petrom's social investments.

[S3-4-33a][S3-4-33b][S3-4-33c] OMV Petrom's uses its grievance mechanism as the main process to identify what action is needed in response to negative impacts, as well as for providing and enabling remedy.

For more information regarding the grievance mechanism, please refer to the "Remediation and channels to raise concerns" section of this report.

[S3-4-34] OMV Petrom has not identified material risks and opportunities arising from impacts and dependencies on affected communities, in line with its double materiality process.

[S3-4-35] OMV Petrom is dedicated to ensuring that its practices do not cause or contribute to material negative impacts on affected communities. To achieve this, the company engages in ongoing dialogue with local communities to identify, mitigate, or prevent impacts and other repercussions that may arise from its operations.

OMV Petrom has established an internal regulation for conducting Environmental and Social Impact Assessments (ESIAs) for its business projects. This regulation allows the company to understand the types of impacts its operations may cause and the mitigation measures that need to be implemented. Public consultations, which are part of the EIA process, ensure that the perspectives and concerns of affected communities and stakeholders are incorporated into the assessments.

For information regarding the actions undertaken by OMV Petrom to prevent the potential negative impact related to process safety incidents, please refer to the Pollution and Process safety chapters.

[S3-4-36] OMV Petrom monitors the number of severe human rights issues and incidents connected to affected communities in our organization or in our value chain. During 2024, the company has identified 0 such cases.

Metrics and targets

[DR S3-5] **Targets**

[S3-5-39] Maintain >80% of local communities covered by yearly social investments

[MDR-T-80a, b, c, d, e, f, i, j] OMV Petrom's target to maintain >80% of local communities covered by yearly social investments refers to the company's own operations and entails 41 out of 41 Romanian counties covered each year. The target aims to advance the company's positive impact related to the creation of opportunities for communities. No baseline was set, as the target applies yearly. There have been no changes to the target or the underlying measurement methodologies, significant assumptions, limitations, sources and processes to collect data adopted within the defined time horizon. We continuously monitor the progress and report it annually. In 2024 we have reached 100% of local communities.

- Yearly spend with local suppliers to be at least 85% of total Procurement spend

[MDR-T-80a, b, c, d, e, f, h, i, j] OMV Petrom aims to support local communities in areas where the company operates by increasing local procurement and aligns with the procurement expectations of neighbouring communities, while also reducing business disruptions. The target is absolute and measured as a percentage of total procurement spend. It applies to the upstream value chain across the entire OMV Petrom Group. No baseline was set, as the target applies yearly. Internal stakeholders and external benchmarks were involved in setting this target. No changes in the target and corresponding metrics or underlying measurement methodologies, significant assumptions, limitations, sources and processes to collect data have been undertaken during the reporting period. OMV Petrom's target regarding yearly spend with the local suppliers is monitored on an ongoing basis through an own digital tool and it is annually reported. In 2024 we have reached 85,1% out of total Procurement spend.

With regards to the potential negative impact related to process safety incidents, a target is set to Maintain the leading position in the industry in Process Safety Event Rate, which also covers the negative impact Critical incidents related to the oil and gas sector include loss of control or containment of hydrocarbons, well blowout,

explosions, fires, unplanned plant disruption and shutdown pertaining to the entity-specific topic Process Safety. Please refer to the Process safety chapter, for more information regarding this target.

[S3-5-42a, S3-5-42c] OMV Petrom's process for setting targets and identifying lessons for improvement is informed by multiple internal stakeholders and their expectations in relation to the company. However, affected communities have not been directly involved in this process.

[S3-5-42b] The company communicates its performance against these targets on an annual basis through its sustainability statement, which is publicly accessible on the corporate website, as part of the Annual Report.

[ESRS 2 MDR-M] **Metrics related to affected communities**

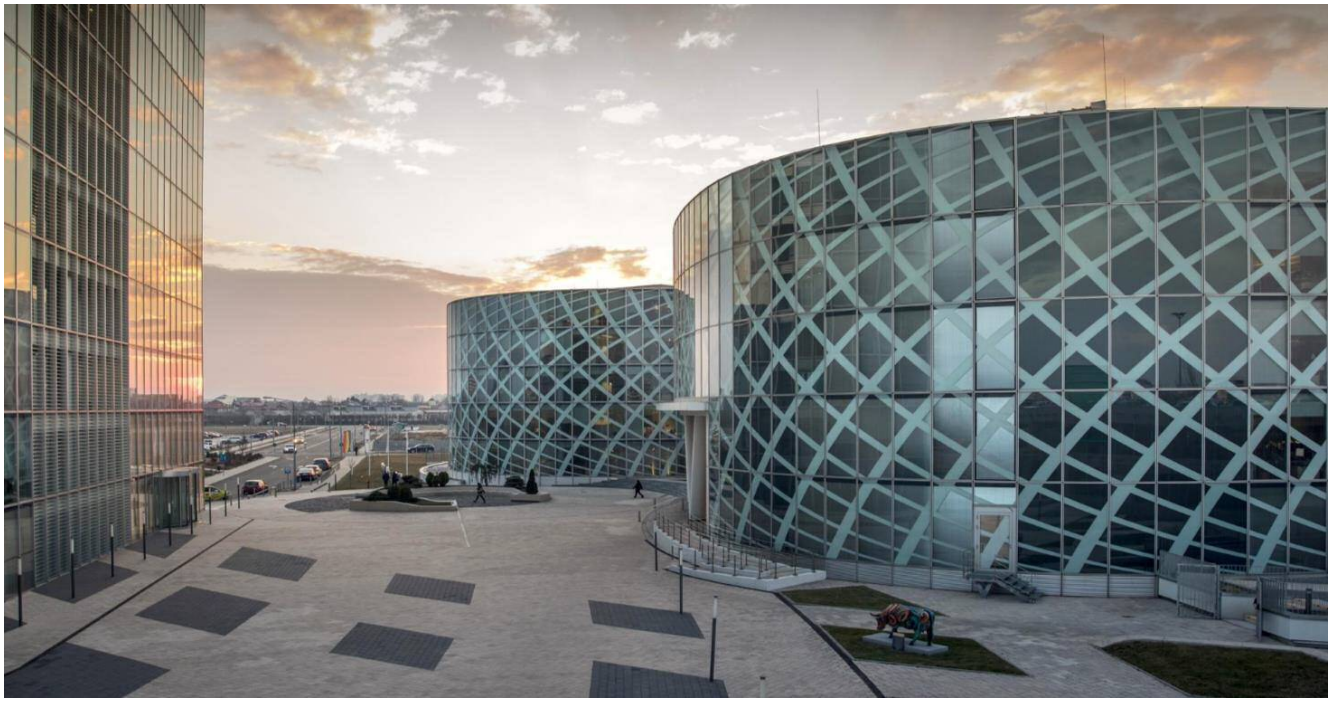

OMV Petrom monitors and discloses a series of metrics used to track the effectiveness of its actions to manage the affected communities topic. These are presented in the table below:

Social investments in local communities

	M.U.	2024	2023
Total amount	mn RON	131	204
Number of beneficiaries	Number	317,394	850,000

The total amount of social investments in local communities is annually reported, and is measured throughout the year via an internal database and then compared with the Controlling reports. [MDR-M-a] The metrics for affected communities are not validated by an external body other than the assurance provider [MDR-M-b].

Governance information

BUSINESS CONDUCT	**194**

ECONOMIC VALUE	**205**

Business conduct

Maintaining ethical behavior is crucial for building a positive reputation and securing and preserving the trust of our business partners, clients, and stakeholders.

As of May 2023, we launched our new Group Values: We care | We're curious | We progress. These values will guide us along the way and on our path into a sustainable future.

Sub-topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Corporate Culture	Defining OMV Petrom's values and behaviours is supporting the company's purpose and strategy	Act	Positive Impact	OO	▶ Code of Conduct ▶ Ethics and Integrity Policy ▶ Code of Business Ethics ▶ Whistleblowing Platform Directive
Corporate Culture	A corporate culture that values safety, ethics, responsibility, and social good contributes to a positive reputation which further creates a potential competitive advantage for the company by attracting customers, attracting and retaining talent, enhancing innovation, increasing productivity, and creating long-term value		Opportunity	OO	▶ OMV Petrom HSSE Policy ▶ OMV Petrom HSSE Directive ▶ OMV Petrom Life Saving Rules ▶ Occupational Safety Management standard ▶ HSSE Motivational Management procedure ▶ HSSE Awareness and Competencies standard ▶ Code of Conduct ▶ Ethics and Integrity Policy ▶ Code of Business Ethics ▶ The Whistleblowing Platform Directive

Sub-topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Supplier Relationships	Late payments of suppliers can lead to loss of jobs and for the small suppliers or contractors who are depending on us, this can lead to bankruptcy	Pot	Negative Impact	UVC	▶ Code of Conduct ▶ Code of Business Ethics ▶ Corporate Procurement Directive ▶ Purchase to Pay Standard ▶ Contractor HSSE Management Standard

[DR G1-1] **Business conduct and corporate culture**

Policies

▶ Code of Conduct

[MDR-P.65] Our values and behaviors promote an ethical, safe, and responsible corporate culture, which support our purpose and strategy, strengthening our reputation. This is achieved through a comprehensive set of policies and actions.

[MDR-P.65-a] To promote our corporate culture and values, and to uphold fair and ethical relationships with suppliers, we adopted a Code of Conduct, which serves as a compulsory conduct guideline applicable to all employees, business partners, and representatives of OMV Petrom Group, focusing on running responsible operations, fostering people and communities, ethical business practices, corporate values, and existing reporting channels.

[MDR-P-b-f] For a detailed description of the Code of Conduct please refer to the IRO Management section in the Climate Change chapter.

▶ Code of Business Ethics

[MDR-P-65a, b, c, f] The OMV Petrom Code of Business Ethics sets forth explicit rules and procedures to ensure ethical behavior among employees, with the objective of establishing binding group-wide rules for ethically correct behavior. It addresses areas such as handling gifts and invitations, managing conflicts of interest, and overseeing donations and sponsorships, while maintaining a stringent zero-tolerance policy towards bribery and corruption. Monitoring the implementation of the Code is done through tracking training, business ethics surveys, and spot checks (e.g., on conflicts of interest, gifts, and invitations). The policy covers all operations and employees of OMV Petrom, without any exclusions. The OMV Petrom Board of Directors is accountable for the implementation of the Code of Business Ethics, with support from the Compliance department. The Code of Business Ethics is available to all employees on the REAL Platform and the intranet page under the “Compliance” section. It is also available on the OMV Petrom internet page, constantly addressed in compliance trainings, and handed over to new employees.

▶ Ethics and Integrity Policy

[MDR-P-65a, b, c, f] The Ethics and Integrity Policy is part of OMV Petrom’s internal ethics regulatory framework, which includes the Code of Conduct, the Code of Business Ethics, and the Whistleblowing Platform Directive. It outlines our ethical values, known as the Integrity Principles, and defines desired and acceptable behaviours that go beyond legal and internal regulatory compliance, to guide business conduct. Its implementation is monitored through training sessions and business ethics surveys. The policy covers all operations and employees without exclusions. The OMV Petrom Board of Directors, supported by the Compliance department, is accountable for its implementation. The policy is available to all employees and is communicated to key stakeholders via Ethics and Integrity Committee meetings, compliance trainings, and is provided to new employees via intranet and REAL platform or by handing over the document.

▶ Whistleblowing Platform Directive

[MDR-P-65a, b,c,d,f] The OMV Petrom Whistleblowing Platform Directive outlines the framework and principles for the Integrity Platform, a third-party managed whistleblowing system. It sets out OMV Petrom's policy for protecting whistleblowers, ensuring confidentiality and anonymity if chosen by the whistleblower. Monitoring is done through training and business ethics surveys. The policy covers all operations and employees without exclusions. The OMV

Petrom Board of Directors, supported by the Compliance department, is accountable for its implementation. The directive aims to implement principles from Directive (EU) 2019 on the protection of persons who report breaches of Union law and Romanian law 361/2022. The Whistleblowing Directive is available to employees on the intranet and through compliance trainings, and to external stakeholders on our website. Additionally, the Pocket Guide “If you see something, say something!” is available on the intranet under the “Compliance/Integrity Platform” section.

▶ Occupational Safety Management Standard

[MDR-P-a, b] To foster a culture of safety, we have implemented a series of policies focused on ensuring employee safety at work. Central to our comprehensive HSSE (Health, Safety, Security, and Environment) management approach is the OMV Petrom Occupational Safety Management Standard. This standard encompasses organizational structure, resource allocation, management processes, and the effectiveness of personnel and equipment within our existing safety culture. The OMV Petrom HSSE Directive provides a framework for managing HSSE aspects, aiming to protect people, the environment, assets, and the company's reputation, in line with our HSSE Policy and our vision and mission of "Committed to Zero Harm – Protect People, Environment, and Assets.".

[MDR-P-a, b] Additionally, we have established a set of Life-Saving Rules that are crucial in preventing accidents. The HSSE Motivational Management Procedure promotes safe behavior among employees, contractors, and partners, with a fair and transparent system of recognition and corrective measures. Furthermore, the HSSE Awareness and Competencies standard sets the essential criteria for managing qualifications, training, and competencies in HSSE within OMV Petrom. Its objective is to ensure that all employees, from the Executive Board to the general workforce, possess the necessary HSSE skills and behaviors.

For more details on the Occupational Safety Management Standard, OMV Petrom HSSE Directive, Contractor HSSE Management Standard, and the Life Saving Rules please refer to S1 section of the Social Information chapter of this statement.

[DR G1-2] **Management of relationships with suppliers – Policies**

[MDR-P.65] We ensure timely payments to our suppliers through a set of policies and actions, which can help reduce potential financial distress due to late payments and improve working conditions for their employees.

▶ Corporate Procurement Directive

[MDR-P-b, c, d, e, f] The Corporate Procurement Directive describes the overall process of supplier engagement and supplier management, including how human rights aspects are embedded in supplier pre-qualification, audits, and meetings, with the key objectives to optimize cost, quality, HSSE performance, supply-side innovation, and sustainability. The directive includes a commitment to sustainability, supporting the OMV Petrom Group Sustainability Targets 2030 and the Sustainable Procurement ambition [MDR-P-a]. The principles and minimum standards stipulated in this directive apply to all purchasing activities pertaining to OMV Petrom and its fully consolidated subsidiaries, except for purchasing of goods and services that are not managed by Procurement, as listed in Annex 1 - Purchases out of Procurement scope to this directive (e.g. trading activities, banking and insurance services etc). Biannual checks are implemented by Procurement Units “Governance and Analytics” and “Strategy and Digitalization”, to monitor the implementation of the Procurement Directive [MDR-P-b]. The Procurement Directive is developed through extensive alignment with internal stakeholders, including accounts payable and business representatives and also based on information acquired during our collaboration with external partners, like CDP and EcoVadis. The highest level of accountability for the Corporate Procurement Directive is held by the Head of Procurement and Governance in OMV Petrom and is further endorsed by the Executive Board. The contents of the policy are regularly communicated via our internal channels for internal stakeholders, while dedicated events and contract negotiations are used for engagement with suppliers and contractors. The Corporate Procurement Directive was updated in 2024 with a new supplier risk profile, based on three major risk areas: Sustainability, Procurement, and HSSE, to enhance supply chain resilience and better reflect the new requirements of the Corporate Sustainability Due Diligence Directive. Furthermore, the Directive introduces a simplified climate change questionnaire for our suppliers, which replaces the CDP disclosure previously used.

▶ Purchase to Pay Standard

[MDR-P-a, b, c, e, f] The Purchase to Pay Standard defines the minimum requirements for the Purchase-to-Pay process, covering activities such as requesting, purchasing from external suppliers (excluding inter-company purchases), receiving, accounting, and paying for goods and services. The requirements of this standard must be followed for all

purchases within OMV Petrom and its fully consolidated subsidiaries. The implementation of this policy is overseen by Procurement & Finance, who continuously monitor payment terms to ensure the 60-day payment terms are met, whereas the highest level of accountability for the Purchase to Pay Standard is held by the Chief Information Officer, who reports directly to the CFO. The standard is developed through extensive alignment with internal stakeholders, including accounts payable and business representatives, and based on information gained in our collaboration with external partners like CDP and EcoVadis. Even though the Purchase to Pay Standard is only published for internal use, the payment terms are included in Frame Contracts or Purchase Orders signed by suppliers and contractors.

Actions related to Corporate Culture

[MDR-A.68 a, b, c, d, e] For promoting a healthy corporate culture, guiding all actions and supporting strategic goals, in 2023, the OMV Petrom Group established a set of core values: We care, We're curious, We progress [MDR-A-a]. These values apply to all operations and employees without exclusions [MDR-A-b]. “Our Values” Intranet page is continuously updated with relevant content. Our People processes were updated in June 2024, while our Learning & Development offer can be accessed at any time during the year by the employees and leaders. Additionally, we continuously embed Values in People processes, Projects and in the Learning & Development offer at OMV Petrom level [MDR-A-c].

[MDR-A-a, b, c] We engage in dialogue within teams and collaboratively identify actions to improve the current work environment and to foster a stronger, more engaged performance within the team. Additionally, we ensure compliance with our values constantly. This is achieved through continuous feedback received at company level on awareness and engagement of our employees with the values through annual initiatives, such as Pulse Check, which measures employee engagement, including values as one questionnaire item, and Annual performance evaluation process, which measures living the values as one of the employees’ individual goals. The Pulse Check is valid for all employees of OMV Petrom Group, measuring their engagement and satisfaction on various people dimensions, whereas the annual performance evaluation process valid for OMV Petrom Group, excluding blue collars.

Actions related to Business ethics and Competition Law

[MDR-A-a, b, c, f] To increase awareness on ethics and integrity, we offer Business Ethics training. It incorporates ethical principles and the Integrity policy, ensuring a thorough understanding of our ethical framework. This training is mandatory and periodically provided by the Compliance department. For managers level 1-4 and top management the mandatory training takes place both in-person and virtually every 3-years with an aim of 90% of the functions at risk. In 2024 we initiated a new training cycle (2024-2026) with a total target group of 365 employees, out of which we trained 132, representing 36% of the target group. For all employees and managers with access to intranet the mandatory e-learning takes place every 2-years. Moreover, frontline employees receive awareness messages on the Code of Business Ethics through flyers. The progress of the training programs is measured in number of trained people for each year of the training cycle and number of people who performed the e-learning.

[MDR-A-a, b, c, f] To enhance understanding of competition principles, we provide specialized training focused on antitrust rules and fair competition practices. This program covers essential principles, legal requirements, and tailored examples to ensure compliance with competition law. Participation in this training is compulsory and it is regularly conducted by the Compliance department. For Competition Law we identified a target group of 325 office employees, out of which we trained 116 in 2024, representing 36% of the target group. The training cycle is 3-years (2024-2026) and the target is 90% of the functions at risk.

[MDR-A-a, b, c, f] Related to the antitrust investigation against Petrom Moldova, we highlight that OMV Petrom has in place a Compliance program consisting of preventive, detective and reactive measures which are aimed at preventing and mitigating risks from non-compliance in the area of competition law within the organization. Preventive measures include developing binding rules to avoid compliance violations, and conducting trainings in this regard. Besides, business can request advice on competition law topics and compliance checks are implemented in business processes, as needed. To detect misconduct, compliance violations can be reported via the Whistleblowing system and external developments are closely monitored to identify risks. Any indication of misconduct is investigated and where appropriate, reactive measures are taken.

OMV Petrom’s compliance management system has been audited in 2023 by external auditors according to the IDW PS 980 standard. The conclusion was that OMV Petrom’s compliance management system is considered as best practice and suitable for identifying, controlling, and managing all significant competition law risks.

Actions related to Safety culture

[MDR-A-a, b, c, e] To foster a culture in which the value of safety is embedded in every level of the workforce, OMV Petrom has developed Safety culture plans, which have been formulated and are being executed at every operational tier of the organization. These plans were developed, approved by the Local Safety Committees, and are being rolled out to all OMV Petrom divisions in a phased approach, to improve the safety culture components: open reporting, intervention, recognition and award, training and development, communication. The plans are revised annually based on operational site needs, with quarterly follow-ups on the defined plans. To track progress, OMV Petrom offers periodical recognition and awards at operational level, an annual Safety Award Event, and a monthly analysis of reported hazards and feedback to the end user. Additionally, Safety Centers have been established to provide practical training on Life Saving Rules, and they are available to both Petrom employees and contractors' staff.

Actions related to Supplier relationships

[MDR-A-a, b, c] The Procurement Department continuously monitors the evolution of payment terms in OMV Petrom's internal reporting IT systems, to ensure the 60 days payment terms are met. To prevent delays, one day prior to expiry of the payment term, SAP system proposes for payment all invoices that are due, and they are paid automatically the next day without the need for manual intervention from Accounts Payable staff. In case there are invoices blocked for payment (e.g. for tax reasons) the reasons are analyzed on case by case basis, and remediation measures are initiated.

[DR G1-1] **Actions to advance corporate culture**

[G1-1.9] OMV Petrom has implemented a comprehensive compliance management system that revolves around the Code of Business Ethics, which is designed to prevent, monitor, and address potential ethical issues, fostering a culture of business ethics. Our Code of Conduct, Ethics and Integrity Policy, and Whistleblowing Platform Directive, ratified by our Executive Board, are made mandatory across all operational countries.

OMV Petrom promotes ethics and integrity through targeted training and awareness programs, including onboarding and recurrent trainings on ethics and integrity, compliance team visits to assets and subsidiaries, multiple whistleblowing channels, and contractual provisions reinforcing our ethical standards.

Our OMV Petrom Group Values – We care, We're curious, We progress – were developed with input from over 5,000 employees and received an 84% positive perception in the 2023 Pulse Check. In 2024, our efforts focused on maintaining values awareness and embedding them in everything we do.

Additionally, all people processes were updated and connected with the values (e.g. Leadership Capabilities, Talent Management Process, Performance Process, Recognition Processes & Tools). Our values became the flagship for other processes in the organization (e.g., HSSE is using "We Care" in their campaigns).

Our values are promoted on our intranet, digital resources like the Purpose & Values Playbook, as well as offline materials. To further promote our values, we have appointed value ambassadors from leadership and change agents from all locations, to whom we offered training during 2023 and 2024.

We actively engage in initiatives to reinforce our values, such as:

- Organizing the Values Quest, an interactive challenge that deepens employees' engagement with our values.
- Conducting P&C roadshows at various locations, including the Petrobrazi refinery and OMV Petrom HQ, to facilitate group discussions on values.
- "Living the Values" is a mandatory goal in performance plans, accounting for 10% of results.
- The "Values in action" aspect of our Recognition Program celebrates employees who exemplify commendable behaviour.

OMV Petrom established the Ethics and Integrity Committee to promote corporate culture and uphold integrity standards. This independent committee meets at least annually to address integrity issues and reinforces a zero-tolerance stance on bribery, fraud, theft, and corruption as outlined in the Code of Business Ethics, which is mandatory for all employees, including subsidiaries and external staff.

OMV Petrom regularly evaluates the ethical climate to identify areas for improvement, through key metrics such as employee surveys on ethical culture, monitoring the number and nature of whistleblower reports, and tracking training participation rates.

Our compliance management system undergoes periodic evaluations by international auditors and conforms to the IDW Assurance Standard 980 for compliance management

systems, with certifications achieved in 2013, 2017, and 2023

[G1-1.10a] OMV Petrom has implemented a comprehensive system for reporting and investigating potential violations of our Code of Business Ethics, policies related to corruption and bribery, and any unlawful behaviour. The internal Whistleblowing Platform Directive outlines the detailed process for identifying and investigating concerns. A detailed description of this directive can be found in the Policies section above.

Our reporting channels include:

- The Integrity Platform: An independent, third-party operated system accessible via the internet, allowing for anonymous reporting by both internal and external stakeholders. The reports received are directed to the relevant departments, with business ethics concerns handled by the Compliance department.
- The Business Ethics Helpline: A toll-free telephone line in Romania for all stakeholders, with reports channeled to the Compliance department for investigation.
- A dedicated compliance email address: Open to all stakeholders, where reports are sent directly to the Compliance department for further action.
- Direct contact: Internal stakeholders can directly approach the Compliance department or the OMV Petrom Compliance Officer.

A compliance monitoring system is in place, that includes regular compliance spot checks, to identify potential instances of unlawful behaviour or behaviour in contradiction of the Code of Conduct and Code of Business Ethics. The focus of spot checks can include gifts, invitations, and conflicts of interest etc. and results reported to OMV Petrom Board.

[G1-1.10b] Since 2013, OMV Petrom has been a committed participant in the United Nations Global Compact, upholding the UN Guiding Principles on Business and Human Rights and contributing to the UN Sustainable Development Goals (SDGs). This includes our adherence to the 10th Principle of the UN Global Compact, focusing on anti-corruption efforts.

[G1-1.10c.i] OMV Petrom has established internal whistleblower reporting channels and has taken several actions to enhance awareness and encourage a speak-up culture:

- A Group-wide "Speak-up" Survey was conducted in 2023 to evaluate the level of speak-up culture, with results communicated in 2024. The main takeaways are the following: employees are positive about reporting wrongdoing and aware about the Integrity Platform as a whistleblowing channel. Visibility on the support of “speak-up culture” will be further increased through all available communication means and focus on eliminating any negative concerns and allaying fears in connection with speaking-up.
- Whistleblowing included in the business ethics training sessions.
- Messages on info screens were displayed to encourage reporting of misconduct.
- Information about whistleblowing channels was distributed quarterly with pay slips, targeting frontline employees.
- The Compliance department reiterated in 2024 the available channels to all managers directly reporting to the Executive Board.

Compliance personnel handling the reports is qualified and certified, engaging in regular exchanges with compliance peers both within and outside the organization, including annual meetings of Local Compliance Officers and forums with American Chamber of Commerce in Romania (“AmCham”) members, as well as participating in webinars to stay informed on compliance issues.

[G1-1.10c.ii, G1-1.10d] OMV Petrom has implemented measures to protect whistleblowers in compliance with the EU Directive 2019/1937 of the European Parliament and of the Council, as well as the Romanian law no. 361/2022 transposing the directive above. Provisions on safeguarding and no retaliation for individuals who report misconduct are included in the Whistleblowing Platform Directive and endorsed by the Executive Board.

Through the Integrity Platform, whistleblowers can report violations confidentially and anonymously. For non-anonymous whistleblowers, we ensure the protection of their identity and provide protection within the framework of national law.

[G1-1.10e] The detailed procedure regarding the investigations of reports and notifications made via the Integrity Platform, including business conduct incidents, is described in the Whistleblowing Platform Directive and includes several steps: pre-screening; case assignment; case handling; determination of follow-up measures and closing. The procedure ensures that the incidents are analyzed in a prompt, independent and objective manner. The results of the investigated incidents are reported directly to OMV Petrom Executive Board and Audit Committee.

[G1-1.10g] OMV Petrom ensures integrity and ethical behavior through mandatory training programs on business ethics and antitrust law. These programs align employees with ethical standards and equip them to identify potential issues, with completion rates tracked.

Our training program includes:

- Mandatory in-person or virtual business ethics training for managers level 1-4 and top management every three years. The course duration is 1 hour.
- Mandatory e-learning on business ethics for all office employees, every two years.
- Mandatory in-person or virtual Competition Law training for managers and employees in high-risk areas every three years. The course duration is 1.5 hours.
- Mandatory e-learning on Competition Law for employees in highest risk-exposed areas, every two years.
- The "NEO" New Employee Orientation program, an induction training offered to new employees, along with the distribution of ethical codes to new hires requiring their written acknowledgment.

The content covers OMV Petrom's Code of Business Ethics, Ethics and Integrity Policy principles, reporting channels with an emphasis on the Integrity Platform, and our no-retaliation policy.

The Compliance department is responsible for delivering these trainings and offering continuous support and guidance, especially to staff managing grievances. We are committed to continue promoting the Ethics & Integrity Policy across OMV Petrom and its subsidiaries.

[G1-1.10h] Functions within the organization that are most exposed to the risks of bribery and corruption include Procurement, Sales, Public Affairs and other functions dealing with authorities (e.g. for authorizations and permitting).

[DR G1-2] **Management of relationships with suppliers**

[G1-2.14] To maintain fair relationships with suppliers and ensure timely payments, so as to reduce the financial dependence of business partners on OMV Petrom, we have established a standard payment term of 60 days for suppliers and contractors, which can be found in the Corporate Procurement Directive and Purchase to Pay Standard.

[G1-2.15a] OMV Petrom responsibly manages supplier relationships, ensuring fair behaviour, by incorporating sustainability requirements into supplier segmentation, performance, meetings and innovation. This fosters positive change and addresses potential negative impacts like economic disruptions from delayed payments. To enhance supply chain resilience and compliance with CSRD and CSDDD requirements, in 2024 we have revised our supplier risk management process and built a new Risk Profile in our internal IT systems for Tier 1 Suppliers. The risk profile takes into account three types of criteria: Sustainability risk, Procurement risk and HSSE risk. Furthermore, we continuously monitor the evolution of the payment terms in our internal reporting IT systems and we take the appropriate measures to prevent and mitigate potential negative impacts generated by late payments.

[G1-2.15b] In 2021, OMV Petrom joined the Together for Sustainability (TfS) initiative, which adheres to the UN Global Compact and Responsible Care® principles. As a TfS member, we ask suppliers to participate in audits and assessments performed by EcoVadis and TfS that evaluate their overall sustainability performance and practices in areas such as environment, social responsibility, labour and human rights (including Employee Health & Safety, Working Conditions, Social Dialogue, Career Management & Training, Child Labor, Forced Labor & Human Trafficking, Diversity, Discrimination & Harassment, External Stakeholder Human Rights), ethics, and supply chain management. Additionally, suppliers must adhere to the applicable legal obligations and also our internal rules and standards, including our Code of Conduct. Non-compliance may lead to the termination of the supplier relationship.

Specifically, during the supplier selection phase we conduct prequalification activities that assess potential suppliers' adherence to our HSSE and sustainability standards, ensuring that only compliant suppliers are considered for future collaboration. This process aligns with the OMV Petrom HSSE Management System (which includes HSSE Policy, ISO 9001, 14001, 45001) and our Sustainability Framework (including Sustainability Policy, Human Rights Policy, and Grievance Mechanisms).

After prequalification, the Procurement Department, along with business representatives, selects suppliers based on commercial, legal, HSSE, and technical criteria. Moreover, to align with our Sustainable Procurement goals, we use the EcoVadis score and participation in the Climate Change Questionnaire to evaluate suppliers' sustainability performance in our commercial assessments.

Metrics and targets

[DR G1-6] **Payment practices**

[G1-6.33a] In 2024, the average time to pay an invoice from the date when the contractual / statutory term of payment starts was of 57.5 days.

[MDR-M.77a, c] For frame contracts, the weighted average payment terms are determined by the weighted delta between the baseline date and the clearing date, using the invoice value in EUR. If the clearing date precedes the baseline date, the value is adjusted to 0 and excluded from the calculation. In the absence of a frame contract, the payment term days specified in the purchase order are used. These figures are tracked and reported in an internal digital tool managed by Procurement and are calculated as purchase orders with payment terms of 60 days or less.

[MDR-M.77b] The metric is not validated by an external body

[G1-6.33b] As per the Corporate Procurement Directive and Purchase to Pay Standard, the standard payment term for our suppliers and contractors is 60 days, regardless of the size, country or services they supply. In 2024, 93.2% of payments were aligned with the standard payment terms.

[MDR-M.77a, c] This percentage is calculated based on how many payments have been done according to the standard payment term of 60 days.

[MDR-M.77b] The metric is not validated by an external body

[G1-6.33c] As of 31st of December, 2024, the company registers 0 legal proceedings outstanding for late payments.

[MDR-M 77 a-c] The metric regarding Legal proceedings outstanding for late payments are counted on a case by case basis and consists of litigations having as object later payment and where any entity under OMV Petrom group is a defendant

[G1-6.33d] No further complementary information is needed.

[MDR-T] **Targets related to management of relationships with suppliers**

[MDR-T.81b.i] The Procurement function, together with Accounts Payable perform continuous monitoring to ensure the payment terms stipulated in OMV Petrom's internal policies are met.

[MDR-T.81b.ii] As defined in the Corporate Procurement Directive and Process to Pay Standard, OMV Petrom's ambition is to meet its 60 days payment terms, so as to prevent any disruptions caused by late payments on suppliers which are dependent on us.

To track the effectiveness of the actions related to the payment terms, OMV Petrom uses the SAP system, and other internal IT tools which track and monitor on an ongoing basis the average time it takes to pay an invoice, as well as the percentage of payments aligned with the standard payment terms. The Procurement Department discusses and analyses on a quarterly basis the reasons for deviations.

Cybersecurity

Nowadays, information is exposed to cyber risks, threats, and vulnerabilities. OMV Petrom invests in information and cybersecurity to safeguard its technology, assets, critical information, and processes, as well as its reputation, aiming to prevent financial or reputational damage from unauthorized access to its systems and data. Maintaining OMV Petrom's cyber threat exposure within defined and acceptable limits is crucial for the entire business.

At OMV Petrom, we believe that the security of our organization begins with the awareness and vigilance of our employees. Therefore, it is imperative that all employees participate in our comprehensive information security awareness training. The training materials have been developed to address and prevent the exploitation of common human vulnerabilities, such as improper use of passwords, phishing emails, IBAN fraud, and impersonation attempts. We deliver this essential training through multiple activities, including online and classroom sessions, creating informative articles on our intranet, and conducting internal phishing campaigns. By equipping our employees with the knowledge and skills to recognize and respond to these threats, we can collectively safeguard our digital environment and maintain the integrity of our operations.

Topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Cybersecurity	Increased security of personal information and protection of right to privacy	Pot.	Positive Impact	OO	▶ IT/OT Security Directive ▶ IT/OT Security Standard ▶ Annex 1 - IT/OT Security Governance Model ▶ IT Security Procedure (related Annexes)
	Lack of protection against cyberthreats	Pot.	Negative impact	OO	

Impact, risk and opportunity management

[MDR-P] **Policies**

[MDR-P.65] To address potential cyberthreats and increase the security of confidential information, we have implemented a set of directives, procedures, and actions.

The Information Technology and Operational Technology (IT/OT) Security framework is designed to align Security Management across IT and OT in OMV Petrom, recognizing the different priorities and constraints of various businesses. It comprises a set of documents, detailed herein after. The IT/OT Security Directive enforces this framework and includes basic guidelines on Use of Devices, Private Use, Prohibited Contents, Access & Password Policy, Physical Security & Visitors, and Data Protection & Privacy. The IT/OT Security Standard sets overarching security principles for OMV Petrom, covering Business Alignment, Security Governance, Security Management, Security Operations, and Resource Management. The IT/OT Security Governance Model Annex defines roles and responsibilities within the IT/OT Security Organization along with respective security requirements. The IT Security Procedure enforces the security controls applicable to the security principles outlined in the IT/OT Security Standard. The IT Awareness & Training Strategy Manual, annex of the IT Security Procedure, provides a strategy for developing and supporting a corporate culture of awareness through awareness campaigns including but not limited to trainings. Ongoing awareness trainings should be provided to OMV Petrom Group employees upon hire and on annual basis to support a corporate culture of awareness. Once receiving basic access (logical or physical) to IT components, users receive IT security awareness materials and are given sufficient time to make themselves familiar with it. IT security awareness shall cover at minimum the IT security requirements relevant to this particular user's job duties and potential interactions with IT components. [MDR-P-a].

These directives and standards are monitored through external audits, and compliance assessments and apply to all OMV Petrom Group companies, employees, contractors, and business partners [MDR-P-b]. The Executive Board is accountable for their implementation [MDR-P-c], being based on international standards like ISO27001:2022, ISO65443, NIST800-53, NIST800-82, ISO27005 [MDR-P-d].

We use a matrix in which we have assigned various stakeholders according to their area of expertise for each document in the framework to review and provide feedback [MDR-P-e]. The IT/OT Security framework and its subsequent directives and policies are applicable for all employees on our internal regulations platform, with training and awareness activities provided through various formats. The framework is also applicable to contractors that use our IT systems. For the ones that connect to our infrastructure we have special requirements (dedicated external user policy in which we define minimum IT requirements, project interactions, etc) [MDR-P-f].

[MDR-A] **Actions**

[MDR-A.68] We implemented several cybersecurity measures, and performed monthly review processes to protect OMV Petrom assets and achieve a higher overall maturity level in information security, by having preventive, detective, and reactive measures, as well as audits and internal assessments.

- OMV Petrom operates an information security/excellence program based on dedicated roadmaps reflecting a risk-based approach. Each year [MDR-A-c], several projects are selected through pre-evaluation processes, considering resource allocation principles and their contribution to reducing cyber threat exposure [MDR-A-a]. The projects managed by the program contribute to enhancing the overall IT maturity level, benefiting all OMV Petrom functions that utilize services based on the underlying Group IT operating model [MDR-A-b].

- As part of our Information Security Management System (ISMS) framework, we have processes that ensure ongoing lifecycle management for both hardware and software assets. We implement security patches and provide guidelines to ensure consistent hardware and software lifecycles [MDR-A-a, c]. This applies to all IT assets covered inside our internal database [MDR-A-b].

- To safeguard our assets and prevent unauthorized access, we implemented an incident management process. This structured approach is used by OMV Petrom to detect, respond to, and recover from security incidents [MDR-A-a]. This process applies to all the organization's cyber assets [MDR-A-b].

- We conduct continuous internal and external breach and attack simulations, as well as penetration tests on critical applications and systems, to help reduce the total number of vulnerabilities [MDR-A-a, c]. This approach applies to all IT assets covered inside our internal database [MDR-A-b].

- We conduct Information Security Audits (e.g. ISO 27001:2022, PCI-DSS, NIS, etc.) on a defined information security related scope to verify the comprehensive implementation and execution of the regulatory information security requirements. There are 3 different audit types affecting OMV Petrom:

  - Regulatory: obligatory legal and regulatory information security requirements
  - Certifications: industry best-practice to proof commitment to information security management and capability to secure essential businesses
  - Country specific: country specific obligatory legal and regulatory information security requirements [MDR-A-a].

These audits are applicable depending on their scope. For example, ISO 27001 evaluates the information security processes against the standard, while PCI-DSS (payment card industry data security standard) is a set of security standards designed to ensure that all companies that process, store, or transmit credit card information maintain a secure environment to protect cardholder data and reduce credit card fraud. NIS (network and information systems directive) is an EU-wide legislation on cybersecurity which refers to applying minimum security standard to protect critical services [MDR-A-b]. These are ongoing activities that are defined by specific regulations and audit requirements [MDR-A-c].

- We run regular and intensive awareness campaigns [MDR-A-a] every year [MDR-A-c] to maintain an adequate level of information security awareness for our employees [MDR-A-b]. These awareness efforts cover a range of topics, including general information security issues, ad hoc demands as timely countermeasures for specific use cases, and target group-focused subjects. The campaigns formats include mandatory e-learning training sessions with knowledge checks, topic-based videos, classroom training sessions, anti-phishing email campaigns, and sharing news via the intranet and internal blog posts. This multifaceted approach ensures comprehensive and continuous learning to effectively enhance our employees' knowledge of information security. In 2024, 57 different types of awareness measures were conducted (e.g., classroom exercises, online training sessions, and email phishing campaigns) to help mitigate the risks of advanced cybersecurity and at the same time contribute to the positive impact related

to the mature information management system regarding personal data protection.
- Our Vulnerability Management system scans all IT assets to maintain system stability, apply updates, and secure systems against cyber threats. The system verifies patch management effectiveness and provides guidance when software updates are insufficient. Additionally, all high and critical vulnerabilities are automatically assigned to remediation owners for swift action, enhancing our overall security posture [MDR-A-a, b].
- We assess all newly introduced IT components from a cybersecurity perspective. This involves adhering to information security requirements and conducting activities such as Business Impact Analysis (BIA), Cybersecurity Architecture (CSA) involvement, control assignment, InfoSec Compliance Assessments, InfoSec Risk Assessments, and Security (Penetration) Tests. These evaluations ensure compatibility with existing systems, identify security vulnerabilities, and guarantee that new components meet performance, scalability, security standards, regulatory requirements, and industry best practices [MDR-A-a, b].

[MDR-A.69] Financial resources allocated to actions in relation to Cybersecurity is considered sensitive information, thus they will not be disclosed.

Metrics and targets

[MDR-T] **Tracking effectiveness of policies and actions through targets**

[ESRS 2 MDR-T 81b] We set the following ambitions to ensure a thorough, automated, and continuous process for identifying, assessing and remediating vulnerabilities, and enhance the overall security posture of OMV Petrom, in line with the objectives of the IT/OT Security framework

- Reach the process maturity level for IT Security to level 4.0.

[MDR-T 81 b ii] Utilizing advanced monitoring tools and analytics, the security team actively identifies potential risks and suspicious activities in real-time. This enables early threat detection and swift, coordinated actions to contain and mitigate incidents before they escalate, reducing the impact on business operations and strengthening the overall security posture.

Due to confidentiality reasons, we cannot disclosure more details regarding our ambitions.

- Achieve the highest level of maturity on IT-OT (Information Technology – Operations Technology) Governance.

[MDR-T 81 b ii] The collaboration between IT and OT teams ensure alignment of strategies and operational practices, incorporating security, performance, and scalability into infrastructure design and management. This results in more resilient and efficient systems across the organization. We monitor the target through dedicated metric on maturity level, however, for confidentiality reason we cannot disclose more details.

[MDR-M] **Metrics in relation to cybersecurity**

[MDR-M.75]

Number	2024	2023
Number of awareness campaigns	57	75

[MDR-M.77a,c] The number of awareness campaigns refers to the number of campaigns such as classroom exercises, online training sessions, internal news, e-mail phishing campaigns and other types of actions.

[MDR-M.77b] This metric is not validated by an external body.

Economic value

Information on the creation and distribution of economic value provides a basic indication of how OMV Petrom has created value for stakeholders. Economic value is entity-specific information since a dedicated ESRS has not been released on this topic

Topic	Impacts, Risks & Opportunities	Actual / Potential	Type	Value chain	Policies
Economic Value	High tax contributions to the Romanian State	Pot.	Positive Impact	OO	▶ OMV Petrom Tax Strategy ▶ Taxes Directive
Economic Value	Regulatory changes resulting in higher taxes impacting the company's financial position	-	Risk	OO	▶ Enterprise-Wide Risk Management (EWRM)
Economic Value	Investments' multiplier effect (direct & indirect) in the Romanian economy	Pot.	Positive Impact	OO	▶ The undertaking has not adopted a policy with reference to the investments' multiplier effect. Instead, the undertaking has committed publicly to investments through the 2030 Strategy.

Impact, risk and opportunity management

[MDR-P] **Policies**

Positive impact: High tax contributions to Romanian State

OMV Petrom has adopted policies and defined a workflow to ensure compliance with legal requirements in force regarding the calculation, declaration and payment of direct and indirect taxes.

[MDR-P-c] In January 2025, OMV Petrom has issued and published OMV Petrom Tax Strategy, implemented by the Tax Department in OMV Petrom. The main areas describe the following:

[MDR-P-a] Tax Planning: OMV Petrom's tax planning supports its business activities and complies with applicable tax laws, avoiding aggressive tax planning and ensuring transactions between affiliated companies are compliant with the arm's-length principle.

[MDR-P-b] Cooperation with Governments: The company fosters open dialogue with stakeholders, including governments and tax authorities, to resolve disputes and achieve early agreement and certainty

[MDR-P-d] Transparency and Risk Management: OMV Petrom adheres to strict financial reporting regulations, prepares accounts in accordance with IFRS, and continuously assesses and manages tax risks through a robust set of controls and procedures.

[MDR-P-a, b, c, e, f]. The Taxes Directive is the most comprehensive regulation and defines the minimum requirements for taxes, levies, and contributions, as well as for tax accounting, transfer pricing, and VAT governance. The directive establishes compliance and reporting procedures and binding responsibilities between the local Finance Manager and OMV Petrom Tax Department for taxes in scope The directive applies to taxes on income and capital, as well as other taxes, levies, and contributions such as VAT, petroleum tax, excise duty, energy tax, production royalties, stamp duties, and penalties, interest, and fines related to tax obligations. It also includes transfer pricing relevant for tax purposes. The directive applies to OMV Petrom SA and its fully consolidated subsidiaries. The Finance Managers of OMV Petrom SA and each of its fully

consolidated subsidiaries are accountable for the implementation of this policy. The regulation was aligned with internal stakeholders before approval and published on OMV Petrom's intranet. Other taxes such as payroll taxes and social security contributions withheld from salaries and wages, customs processes, and other taxes for which the assessment/calculation responsibility lies with business operations, such as contributions to environment fund and authorization taxes, are regulated by other adopted tax policies.

The implementation of the Taxes Directive as well as of other adopted tax policies is monitored through the Internal Control System (ICS) available at OMV Petrom Group level. Specifically, in case of tax contributions, the ICS details the controls that cover the computation of direct and indirect taxes, the timeline for the computation and submission of the tax returns, the performance of the tax payments, the necessary checks and reconciliations and the persons responsible involved in the processes, enabling a four eyes' principle. Each control is assigned to the entity/entities within OMV Petrom Group to which the respective control is applicable; its frequency, purpose, nature and validity are defined. Responsible persons are nominated for control execution, review, monitoring and performance evaluation. For more detail on the ICS, please consult the General disclosures chapter, in the GOV-5 section.

Risk: Regulatory changes resulting in higher taxes impacting the company's financial position:

[MDR-P-a, b, c, e, f] OMV Petrom has implemented a long-term Strategic Risk Management process for the purpose of identifying, analyzing, evaluating and addressing significant risks, such as market, financial, operational and strategic risks. Among these risks, we have identified potential regulatory changes which can result in higher taxes, ultimately impacting the company's financial position. To address this, we have implemented an Enterprise-Wide Risk Management (EWRM) Standard which defines and supports a comprehensive EWRM program. It provides guidance to Corporate Functions, Business Divisions, and their subsidiaries within OMV Petrom Group on assessing, managing, and reporting risks at all levels. This standard defines the EWRM Framework which offers a systematic approach to managing risks, enabling OMV Petrom SA and its fully consolidated subsidiaries to make informed decisions on risks and opportunities as they arise. The Executive Board is accountable for the overall management of risk across OMV Petrom Group. The regulation was aligned with internal stakeholders before approval and published on OMV Petrom's intranet.

[MDR-A] **Actions**

Positive impact: High tax contributions to Romanian State

[MDR-A- a, b, c] The computation, payment, transparency, and publication of information on tax contributions to the Romanian State are listed as main priorities of the OMV Petrom Group (OMV Petrom SA and its Romanian subsidiaries). The taxes contributed by the foreign subsidiaries of the OMV Petrom Group are not in scope for this disclosure, as they are due to each state budget of each foreign subsidiary. Typical business taxes as well as industry-specific taxes (e.g. royalties, exploitation of natural resources tax, tax on additional revenues offshore, etc.) are within the scope. Romania is the stakeholder. OMV Petrom releases annual and quarterly reports to facilitate understanding of tax contributions and policies. These actions ensure transparency and compliance with tax obligations, enhancing stakeholder trust and demonstrating OMV Petrom Group's commitment to responsible tax practices. The actions are conducted quarterly or annually, depending on the type of tax and its related legally binding deadline for assessment and payment.

Risk: Regulatory changes resulting in higher taxes impacting the company's financial position.

[MDR-A-a, b, c] We constantly monitor political and regulatory changes through our Regulatory and Corporate Public Affairs department in domains such as energy, environment, climate change, fiscal policies, and trade activities. All relevant changes are analyzed and implemented to ensure that budgets, payments, and reporting are permanently updated and compliant with laws and regulations. In Romania, without a lobbying law, we express our views on business and regulatory issues via public advocacy channels, such as business sector confederations and professional associations. We draft and disclose our positions through press statements or position papers submitted to the authorities. Active involvement includes providing input during public consultation calls, simplification initiatives, seeking clarifications on legislative requirements, and proposing changes that encourage investments in Romania. For OMV Petrom S.A. and its Romanian subsidiaries, the OMV Petrom Tax Department within the CFO Division coordinates such actions. These actions are taken when deemed necessary. We are also actively providing input and opinions each time law provisions changes are under public consultation.

Positive impact: Investments' multiplier effect (direct & indirect) in the Romanian economy:

[MDR-A-a, b, c] OMV Petrom is committed to supporting Romania's energy transition through a 2030 Strategy, which outlines an Investment Plan with investments of about EUR 11 billion between 2022 and 2030, having a multiplier effect on Romania's economy. The investment plan aims to capitalize on emerging market opportunities while delivering value for all stakeholders, driven by three key pillars: transitioning to low and zero carbon, growing regional gas, and optimizing traditional business.

[MDR-A-a] The most significant OMV Petrom's investment, Neptun Deep project, has a potential multiplier effect in Romania for the period 2023- 2044 that was assessed independently by Consilium Policy Advisors Group in June 2023.

[MDR-A.69] There are no significant Capex or Opex allocated to the actions related to the positive impact namely High tax contributions to Romanian State) and the risk regarding Regulatory changes resulting in higher taxes impacting the company's financial position).

Total Capex allocated in 2024 in addressing the action above regarding OMV Petrom's support in Romania's energy transition through the 2030 Strategy, having a multiplier effect on Romania's economy, is disclosed in the 2024 Annual Report in the Director's Report Section.

Metrics and Targets

[MDR-T] **Targets**

[MDR-T.81 b i,ii] Target related to high tax contribution: No measurable outcome oriented-target has been set. The policies and actions presented above related to tax contributions have proved to be effective since we have contributed high amounts of taxes to the Romanian State. Our ambition is to keep on being a reliable contributor to the Romanian State by always paying our taxes in time. The amount of total contributions (the metric used to measure progress year on year) is published annually in the CFO presentation that is included in the Annual GMS.

Target related to regulatory changes: No measurable outcome oriented target has been set. Our policies and actions presented above related to regulatory changes have proved to be effective since we have contributed high amounts of taxes to the Romanian State following regulatory changes (for instance the payment in 2024 of the solidarity contribution on refined crude oil). Our ambition is to ensure in time payment of any potential higher taxes following legislative changes.

Target related to multiplier effect: No measurable outcome oriented-target has been set. Our ambition is to support Romania's energy transition through a 2030 Strategy to which we have committed publicly with investments of about EUR 11 bn between 2022 and 2030. The progress is based on the investments made and measured year on year versus 2022.

[MDR-M] **Metrics**

- Total tax contributed to the Romanian State
- KPIs on GDP, employment and state revenues for multiplier effect impact for offshore investments in Romanian economy based on Consilium Policy Advisors Group's assessment.

[MDR-M.77, a, b] The methodology of the taxes contributed by OMV Petrom Group (OMV Petrom S.A. and its Romanian subsidiaries) to the Romanian State has been defined according to the Romanian fiscal legislation. The computation is based on amounts declared to the Romanian State or estimated in accordance with local tax legislation as at the reporting period. The measurement of the metric is not validated by an external body.Total tax contributions of OMV Petrom Group (OMV Petrom S.A. and its Romanian subsidiaries) to the Romanian State as of December 31, 2024, amounted to RON 15,933 mn (December 31, 2023: RON 16,019 mn). This amount includes:

- direct taxes amounting to RON 4,257 mn (December 31, 2023: RON 5,968 mn), mainly related to profit tax, crude and gas royalties, natural gas additional revenues tax, tax on additional revenues offshore
- indirect taxes amounting to RON 10,830 mn (December 31, 2023: RON 9,072 mn) mainly related to excise and VAT
- dividends amounting to RON 846 mn (December 31, 2023: RON 979 mn).

[MDR-M-b, a] Neptun Deep's multiplier effect was assessed independently by Consilium Policy Advisors Group. The economic impact considered the GDP, employment, and state revenues. The scenario developed in this assessment is based solely upon publicly available data and Consilium Policy Advisors Group's expertise and analysis. Although the information compiled in this assessment is considered reliable, its accuracy is not guaranteed and is not to be taken in substitution for the exercise of judgement by any recipient. This assessment includes forward-looking statements, such as forecasts or expectations that are based on views and assumptions at the date of the assessment, and subject to known and unknown risks and uncertainties. Given the large degree of volatility and uncertainty in natural gas markets,

fiscal and regulatory conditions, and the global economy, the actual results, performance figures, or events may differ significantly from those expressed or implied in such forward-looking statements.

This assessment considers an investment of approximately EUR 4 billion in the Neptun Deep project, out of which 50% represents OMV Petrom's share, and accordingly, the cumulated economic direct, indirect and induced impact during a 22- year period has been measured in terms of:

- Economic impact in GDP: for the period 2023-2044, the Neptun Project will have a EUR 42 bn (equivalent of RON 209 bn) contribution to Romania's GDP, representing an average annual increase equivalent to 0.67% of 2022 GDP;
- Estimated contributions to State Budget including dividends (assuming theoretical 100% payout ratio) and excluding VAT: EUR 22 bn (equivalent of RON 109 bn);
- In the same period, Neptun project could create or maintain 9,100 jobs throughout Romania.

[MDR-M-d] The equivalent values in RON were computed using the closing exchange rate of 4.9741 RON/ EUR.

EU Taxonomy – Nuclear and fossil gas related activities

Row	Nuclear energy-related activities	
1.	The undertaking carries out, funds, or has exposure to research, development, demonstration, and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	NO
2.	The undertaking carries out, funds, or has exposure to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	NO
3.	The undertaking carries out, funds, or has exposure to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	NO

Row	Fossil gas-related activities	
4.	The undertaking carries out, funds, or has exposure to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	YES
5.	The undertaking carries out, funds, or has exposure to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	YES
6.	The undertaking carries out, funds, or has exposure to construction, refurbishment, and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	NO

Annex B

Disclosure Requirement and related datapoint	SFDR	Pillar 3	Benchmark Regulation	EU Climate Law	Inclusion (chapter, section) / Relevance (not material and/or phased-in)
ESRS 2 GOV-1 Board's gender diversity paragraph 21 (d)	x		x		General disclosures, Governance, GOV-1
ESRS 2 GOV-1 Percentage of board members who are independent paragraph 21 (e)			x		General disclosures, Governance, GOV-1
ESRS 2 GOV-4 Statement on due diligence paragraph 30	x				General disclosures, Governance, GOV-4
ESRS 2 SBM-1 Involvement in activities related to fossil fuel activities paragraph 40 (d) i	x	x	x		General disclosures, Governance, GOV-4
ESRS 2 SBM-1 Involvement in activities related to chemical production paragraph 40 (d) ii	x		x		General disclosures, Strategy, SBM-1
ESRS 2 SBM-1 Involvement in activities related to controversial weapons paragraph 40 (d) iii	x		x		General disclosures, Strategy, SBM-1 – not material
ESRS 2 SBM-1 Involvement in activities related to cultivation and production of tobacco paragraph 40 (d) iv			x		General disclosures, Strategy, SBM-1 – not material
ESRS E1-1 Transition plan to reach climate neutrality by 2050 paragraph 14				x	Climate change, Strategy, E1-1
ESRS E1-1 Undertakings excluded from Paris-aligned Benchmarks paragraph 16 (g)		x	x		Climate change, Strategy, E1-1
ESRS E1-4GHG emission reduction targets paragraph 34	x	x	x		Climate change, Metrics and targets, E1-4
ESRS E1-5 Energy consumption from fossil sources disaggregated by sources (only high climate impact sectors) paragraph 38	x				Climate change, Metrics and targets, E1-5
ESRS E1-5 Energy consumption and mix paragraph 37	x				Climate change, Metrics and targets, E1-5
ESRS E1-5 Energy intensity associated with activities in high climate impact sectors paragraphs 40 to 43	x				Climate change, Metrics and targets, E1-5
ESRS E1-6 Gross Scope 1, 2, 3 and Total GHG emissions paragraph 44	x	x	x		Climate change, Metrics and targets, E1-6
ESRS E1-6 Gross GHG emissions intensity paragraphs 53 to 55	x	x	x		Climate change, Metrics and targets, E1-6
ESRS E1-7 GHG removals and carbon credits paragraph 56				x	Climate change, Metrics and targets, E1-7
ESRS E1-9 Exposure of the benchmark portfolio to climate-related physical risks paragraph 66			x		Phased-in
ESRS E1-9 Disaggregation of monetary amounts by acute and chronic physical risk paragraph 66 (a) ESRS E1-9 Location of significant assets at material physical risk paragraph 66 (c)		x			Phased-in
ESRS E1-9 Breakdown of the carrying value of its real estate assets by energy-efficiency classes paragraph 67 (c)		x			Phased-in
ESRS E1-9 Degree of exposure of the portfolio to climate- related opportunities paragraph 69			x		Phased-in
ESRS E2-4 Amount of each pollutant listed in Annex II of the E-PRTR Regulation (European Pollutant Release and Transfer Register) emitted to air, water and soil, paragraph 28	x				Pollution, Metrics and targets, E2-4

Disclosure Requirement and related datapoint	SFDR	Pillar 3	Benchmark Regulation	EU Climate Law	Inclusion (chapter, section) / Relevance (not material and/or phased-in)
ESRS E3-1 Water and marine resources paragraph 9	x				Water, Impact, risk and opportunity management, E3-1
ESRS E3-1 Dedicated policy paragraph 13	x				Water, Impact, risk and opportunity management, E3-1
ESRS E3-1 Sustainable oceans and seas paragraph 14	x				Water, Impact, risk and opportunity management, E3-1
ESRS E3-4 Total water recycled and reused paragraph 28 (c)	x				Water, Metrics and targets, E3-4
ESRS E3-4 Total water consumption in m 3 per net revenue on own operations paragraph 29	x				Water, Metrics and targets, E3-4
ESRS 2- SBM 3 - E4 paragraph 16 (a) i	x				Biodiversity and ecosystems, Strategy, E4-SBM 3
ESRS 2- SBM 3 - E4 paragraph 16 (b)	x				Biodiversity and ecosystems, Strategy, E4-SBM 3
ESRS 2- SBM 3 - E4 paragraph 16 (c)	x				Biodiversity and ecosystems, Strategy, E4-SBM 3
ESRS E4-2 Sustainable land / agriculture practices or policies paragraph 24 (b)	x				Biodiversity and ecosystems, Impact, risk and opportunity management, E4-2
ESRS E4-2 Sustainable oceans / seas practices or policies paragraph 24 (c)	x				Biodiversity and ecosystems, Impact, risk and opportunity management, E4-2
ESRS E4-2 Policies to address deforestation paragraph 24 (d)	x				Biodiversity and ecosystems, Impact, risk and opportunity management, E4-2
ESRS E5-5 Non-recycled waste paragraph 37 (d)	x				Not material
ESRS E5-5 Hazardous waste and radioactive waste paragraph 39	x				Not material
ESRS 2- SBM3 - S1 Risk of incidents of forced labour paragraph 14 (f)	x				Own workforce, Strategy, S1-SBM 3
ESRS 2- SBM3 - S1 Risk of incidents of child labour paragraph 14 (g)	x				Own workforce, Strategy, S1-SBM 3
ESRS S1-1 Human rights policy commitments paragraph 20	x				Own workforce, Impact, risk and opportunity management, S1-1
ESRS S1-1 Due diligence policies on issues addressed by the fundamental International Labor Organisation Conventions 1 to 8, paragraph 21			x		Own workforce, Impact, risk and opportunity management, S1-1
ESRS S1-1 processes and measures for preventing trafficking in human beings paragraph 22	x				Own workforce, Impact, risk and opportunity management, S1-1
ESRS S1-1 workplace accident prevention policy or management system paragraph 23	x				Own workforce, Impact, risk and opportunity management, S1-1
ESRS S1-3 grievance/complaints handling mechanisms paragraph 32 (c)	x				Own workforce, Impact, risk and opportunity management, S1-3
ESRS S1-14 Number of fatalities and number and rate of work-related accidents paragraph 88 (b) and (c)	x		x		Own workforce, Metrics and Targets, S1-13
ESRS S1-14 Number of days lost to injuries, accidents, fatalities or illness paragraph 88 (e)	x				Own workforce, Metrics and Targets, S1-13
ESRS S1-16 Unadjusted gender pay gap paragraph 97 (a)	x		x		Not material
ESRS S1-16 Excessive CEO pay ratio paragraph 97 (b)	x				Own workforce, Metrics and Targets, S1-16
ESRS S1-17 Incidents of discrimination paragraph 103 (a)	x				Own workforce, Metrics and Targets, S1-17

Disclosure Requirement and related datapoint	SFDR	Pillar 3	Benchmark Regulation	EU Climate Law	Inclusion (chapter, section) / Relevance (not material and/or phased-in)
ESRS S1-17 Non-respect of UNGPs on Business and Human Rights and OECD Guidelines paragraph 104 (a)	x		x		Own workforce, Metrics and Targets, S1-17
ESRS 2- SBM3 – S2 Significant risk of child labour or forced labour in the value chain paragraph 11 (b)	x				Workers in the value chain, Strategy, S2-SBM 3
ESRS S2-1 Human rights policy commitments paragraph 17	x				Workers in the value chain, Impact, risk and opportunity management, S2-1
ESRS S2-1 Policies related to value chain workers paragraph 18	x				Workers in the value chain, Impact, risk and opportunity management, S2-1
ESRS S2-1Non-respect of UNGPs on Business and Human Rights principles and OECD guidelines paragraph 19	x		x		Workers in the value chain, Impact, risk and opportunity management, S2-1
ESRS S2-1 Due diligence policies on issues addressed by the fundamental International Labor Organisation Conventions 1 to 8, paragraph 19			x		Workers in the value chain, Impact, risk and opportunity management, S2-1
ESRS S2-4 Human rights issues and incidents connected to its upstream and downstream value chain paragraph 36	x				Workers in the value chain, Impact, risk and opportunity management, S2-4
ESRS S3-1 Human rights policy commitments paragraph 16	x				Affected communities, Impact, Risk and Opportunity Management, S3-1
ESRS S3-1 non-respect of UNGPs on Business and Human Rights, ILO principles or OECD guidelines paragraph 17	x		x		Affected communities, Impact, Risk and Opportunity Management, S3-1
ESRS S3-4 Human rights issues and incidents paragraph 36	x				Affected communities, Impact, Risk and Opportunity Management, S3-4
ESRS S4-1 Policies related to consumers and end-users paragraph 16	x				Not material
ESRS S4-1 Non-respect of UNGPs on Business and Human Rights and OECD guidelines paragraph 17	x		x		Not material
ESRS S4-4 Human rights issues and incidents paragraph 35	x				Not material
ESRS G1-1 United Nations Convention against Corruption paragraph 10 (b)	x				Business conduct, Impact, risk and opportunity management, G1-1
ESRS G1-1 Protection of whistle- blowers paragraph 10 (d)	x				Business conduct, Impact, risk and opportunity management, G1-1
ESRS G1-4 Fines for violation of anti-corruption and anti-bribery laws paragraph 24 (a)	x		x		Not material
ESRS G1-4 Standards of anti-corruption and anti- bribery paragraph 24 (b)	x				Not material
