IRO-2	Disclosure requirements in ESRS covered by the undertakings' Sustainability Statement

1 GENERAL DISCLOSURES [ESRS 2]

1.1 General basis for preparation of sustainability statements [BP-1]

The Sustainability Statement of MOTOR OIL Group (hereinafter "the Group" or "MOTOR OIL Group") for the reporting period 1 January to 31 December 2024 has been prepared in accordance with the European Sustainability Reporting Standards (ESRS). It serves both as a compliance reference under applicable regulations and as a demonstration of the Group's ongoing commitment to transparency, accountability, and responsible business practices. This report provides stakeholders with insights into environmental, social and governance (ESG) actions, initiatives and impacts and covers the value chain of the Group, including the impacts, risks and opportunities (IROs) identified in the upstream and downstream supply chain as well as the Group's own operations.

The Sustainability Statement has been prepared on a consolidated basis, aligned with the financial statements to ensure consistency in the reporting scope. It covers all MOTOR OIL Group entities, including subsidiaries and Joint Operations (JOs), as well as Associates and Joint Ventures (JVs) and reflects their material Impacts, Risks and Opportunities across all business operations. The reporting period follows the financial year, ensuring comparability between financial and sustainability information and is referenced to appropriate financial indicators when needed.

In continuation of previous years, the Group has conducted a double materiality assessment that incorporates impacts, risks and opportunities across the entirety of the value chain, while considering key areas such as emissions, resource utilization, labor conditions, as well as business conduct. The Group's policies, actions, targets and metrics reflect the efforts to reduce environmental impacts, enhance resource efficiency and promote ethical labor practices. It has to be noted, that all available value chain data are integrated into sustainability metrics to ensure coverage (in cases where this was not possible, it is duly noted).

Finally, the narrative of the Sustainability Statement is structured to follow the Group's core business functions as outlined in the table, ensuring a comprehensive presentation of sustainability impacts, risks, opportunities and actions.

MOTOR OIL Group Business Functions			
Refining, Supply & Trading	Refining of fuel products Petrochemicals Supply & Trading	**Electrification**	Renewable Power Generation Renewable Power Management Thermal Power Generation Power and Gas Supply & Trading Energy Storage Energy Home Solutions
Retail	Energy trading Fuel Retail Fleet Customer Solutions E-mobility	**Circular Economy and Alternative Fuels**	Lubricant Regeneration Environment and Waste Management Waste Oils Collection Energy from Waste Energy Crop Development High-Energy Value Feedstock Collection Biofuels and e-fuels

MOTOR OIL Group has not omitted any sustainability-related disclosures due to intellectual property, ongoing negotiations, or innovation protection. All relevant information has been fully incorporated into this report.

1.2 Disclosures in relation to specific circumstances [BP-2]

MOTOR OIL Group has defined time horizons for impacts, risks and opportunities in alignment with the ESRS framework. These time horizons are categorized as short-term (current to one year), medium-term (two to five years) and long-term (beyond five years).

Sustainability metrics incorporate data from both upstream and downstream value chain activities. Where direct data is not available, industry benchmarks and proxy data are used, with reasonable accuracy. In any case, the Group is committed to continuously enhance data quality through engagement with suppliers and business partners to improve transparency across the value chain, a fact that will be certainly improving during the next reporting period. For the time being, several metrics have been based on larger- or lower-scale estimations. These include:

- Scope 3 emissions
- Non-employees (contractors)

Furthermore, there are metrics that include estimates of upstream and/or downstream value chain data using indirect sources, mostly referring to Scope 3 emissions and non-employees. The references for all estimates are documented in detail in the corresponding sections below. For every methodology used and the assumptions made, these issues are addressed clearly in the corresponding chapters. This approach is chosen, as such estimates are limited to the energy mix of Greece, the emission factors used for the emission calculations and to certain internationally recognized net calorific values for energy conversions. The Group is committed to limit the use of the assumptions made for the following years, depending on the availability of data and the progress of scientific research in the petroleum sector regarding its value chain.

This Statement has been prepared in accordance with Laws 4403/2016 and 4548/2018, which transpose EU Directive 2013/34/EC, as amended, into Greek legislation. It also complies with the provisions of Law 5164/2024 (Government Gazette A 202/12.12.2024), which incorporated Directive (EU) 2022/2464 of the European Parliament and Council into national law. These legal frameworks establish the obligation for large undertakings classified as public interest entities, as defined in Annex A of the Directive, to prepare both a Management Report and a Non-Financial Statement. Additionally, this Statement includes the disclosures required under the Corporate Sustainability Reporting Directive (CSRD), as implemented through the European Sustainability Reporting Standards (ESRS), which introduce enhanced sustainability reporting requirements for companies operating within the EU. The statement references additional frameworks and commitments, including the Global Reporting Initiative (GRI), IFRS S1,S2 and the Sustainable Development Goals (SDGs). Additionally, the report references the EU Taxonomy Regulation, ensuring alignment with the European framework for classifying environmentally sustainable economic activities.

1.3 Governance

The following information can be found in the Corporate Governance Statement 2024:

1. A detailed description of the role of the BoD and its committees (Audit Committee, Remuneration Committee and Nominations Committee).
2. The composition and diversity of the members of the undertaking's administrative, management and supervisory bodies including experience relevant to the sectors, products and geographic locations as well as business conduct matters of the undertaking.
3. A description of how the administrative, management and supervisory bodies determine whether appropriate skills and expertise are available or will be developed to oversee sustainability matters, including (a) the sustainability-related expertise that the bodies, as a whole, either directly possess or can leverage, for example through access to experts or training; (b) how those skills and expertise relate to the undertaking's material impacts, risks and opportunities.

1.3.1 The role of the Administrative, Management and Supervisory Bodies [GOV-1]

Supervisory Bodies

The Board of Directors holds ultimate responsibility for defining and overseeing the Group's business and sustainability strategy, ensuring that ESG considerations are fully embedded into long-term value creation, risk management and strategic planning, in alignment with corporate objectives and evolving regulatory requirements. It also regularly evaluates the opportunities and risks associated with the defined strategy, as well as the effectiveness of the measures implemented to address them. Several Board members bring relevant sustainability experience in areas such as energy transition, risks and regulatory compliance and five of them serve on the Group's Sustainability Committee actively contributing to the integration of sustainability into both strategic direction and operational oversight. To support this role, all Board members have completed targeted sustainability training designed to address emerging regulatory frameworks and the environmental, social and governance impacts, risks and opportunities facing the organization in the global energy sector. There is no representation of employees and other workers in the Board of Directors.

BoD Composition	
Description	**2024**
Number of executive members	4
Number of non-executive members	6
Percentage (%) of male members of the BoD	80%
Percentage (%) of female members of the BoD	20%
Board's gender diversity ratio	0.25
Percentage (%) of independent board members	30%

The **Audit Committee** is responsible for overseeing the review and approval of non-financial disclosures, ensuring the integrity, reliability and regulatory compliance of sustainability-related reporting. Its members possess expertise in both financial and non-financial matters, including sustainability and have received targeted training on ESG impacts, risks, opportunities and the audit process for sustainability reporting.

The **Nomination Committee** is responsible for ensuring that both the management and supervisory bodies possess the appropriate sustainability-related expertise, including business conduct matters, to support the Group's strategic direction. The Chairman of the Nomination Committee also serves as a member of the Sustainability Committee, reinforcing the alignment between governance oversight and sustainability leadership.

The **Remuneration Committee** is responsible for integrating sustainability-related performance indicators - recommended by the Sustainability Committee - into executive and management incentive schemes, reinforcing the link between ESG outcomes and performance-based rewards. The Chair of the Remuneration Committee also serves as a member of the Sustainability Committee, ensuring close coordination between sustainability objectives and compensation frameworks.

The **Sustainability Committee** was established in June 2021 and consists of board members. The committee is responsible for designing and overseeing the Group's Sustainability Policy and Strategy. It defines strategic objectives, reviews material ESG topics (Including Impacts, Risks, Opportunities) and performance and approves annual and long-term ESG-related targets. The committee works in close cooperation with the Sustainability Division. The composition of the committee is the following:

Chair: Petros T. Tzannetakis (Executive Board member)

Members:

John N. Kosmadakis (Executive Board member)

Michael-Matheos J. Stiakakis (Executive Board member)

Rania N-P Ekaterinari (Non-Executive / Independent Board member)

Niki D. Stoufi (Non-Executive Board member)

Convener: Helena Athoussaki - Chief Sustainability Officer

The Sustainabitliy Committee meets at least once a year and additionally, as needed, when deemed necessary by the Committee's Chairman. Minutes of the meetings are kept, which are approved by the members of the Committee and then signed by the Chairman and the members.

In 2024, the Committee convened in September 2024 where all members of the committee participated.

Key duties:

- Oversees the Group's Sustainability Strategy, ensuring alignment with the Group's vision, values and overall business strategy.
- Supervises sustainability due diligence processes to identify, assess and address material ESG risks and impacts
- Monitors the content and completeness of sustainability reports and all external ESG-related communications, ensuring transparency and consistency.
- Reviews and approves management proposals related to the content of the sustainability strategy and submits recommendations to the Board of Directors for final approval.
- Monitors the effectiveness of the Group's ESG and sustainability-related risk management framework, ensuring appropriate governance and oversight.
- Sets ESG priorities and both short- and long-term targets, oversees the implementation of sustainability initiatives and monitors the progress and performance of these actions.

Oversees and evaluates the Group's overall contribution to society, ensuring that ESG efforts generate positive social impact.

Approves sustainability and ESG-related policies and procedures, ensuring alignment with international standards and regulatory requirements.

Endorses the Double Materiality Assessment process, ensuring that the Group's ESG strategy addresses the most relevant and significant issues.

Reviews and approves proposals regarding the Group's commitments to climate change and decarbonization, ensuring alignment with global frameworks.

Collaborates with other Board committees on cross-cutting ESG topics, promoting a coordinated and integrated governance approach.

Works closely with the Sustainability Division and the internal ESG Working Group, providing guidance and oversight in the implementation of sustainability goals.

Evaluates the ESG performance of both the Committee and the executive management team, ensuring that ESG responsibilities are executed effectively and contribute to the Group's overall strategic objectives.

The sustainability competencies of the members of the Sustainability Committee are derived from a combination of factors, including their experience in risk management, knowledge of ESG-related regulatory frameworks and deep expertise in the energy sector. These are complemented by strong strategic thinking capabilities and the ability to evaluate business plans and long-term scenarios. In addition, all members have received targeted training on sustainability regulations, emerging ESG trends and sector-specific developments, ensuring they remain up to date and well-equipped to guide the Group's sustainability agenda.

Management Body

The Chief Executive Officer (CEO) and Deputy CEOs are the highest-ranking executives within the Group, responsible for overall strategic leadership and corporate oversight. They provide direction and ensure alignment of business objectives with the Group's long-term vision and stakeholder expectations.

The General Managers, reporting to the CEO and Deputy CEOs are responsible for executing the Group's strategy across operations and business activities, including the integration of sustainability.

Administrative bodies

The Chief Sustainability Officer (CSO) leads the overall sustainability agenda and reports directly to executive leadership and the Sustainability Committee. The CSO works in close coordination with the Sustainability Committee to ensure ESG strategy aligns with the Group's overall business objectives and regulatory expectations. This role ensures that the group's ESG strategy is effectively translated into practice across all levels.

The CSO advises executive leadership on sustainability-related risks and opportunities, guiding the Group's strategic response and transformation. Acting as a convenor, the CSO provides strategic and operational support to the Sustainability Committee - coordinating inputs, facilitating discussions and ensuring that decisions are based on accurate ESG data, regulatory insights and cross-functional collaboration.

The **Sustainability Division** serves as the operational core of MOTOR OIL Group's sustainability strategy, responsible for translating strategic objectives into measurable action. Comprising experienced professionals in sustainability reporting, control management, ESG compliance and environmental management, the division plays a central role in embedding sustainability into the Group's operations and strategic planning. It is tasked with the implementation and oversight of environmental, social and governance (ESG) initiatives, ensuring that all activities are aligned with international sustainability standards and the Group's corporate goals. The division also monitors ESG performance, supports cross-functional collaboration and drives continuous improvement across all business units.

Key duties:

Managing and enhancing the Group's ESG reporting systems, consolidating ESG data across all pillars and ensuring the accuracy, compliance and integrity of the annual ESG report. It oversees the preparation, review and alignment of all sustainability disclosures with applicable standards, regulations and internal audit requirements.

Developing the Group-level double materiality assessment and supports the development of short- and long-term sustainability strategies.

Monitors key ESG performance indicators, including carbon emissions, waste management and external ESG ratings. It tracks the financial impacts of sustainability-related risks and opportunities, performs gap analyses and communicates findings to support continuous improvement across the Group.

Ensures Group-wide compliance with ESG regulations, policies and frameworks, including climate-related obligations. It oversees the implementation of relevant ESG standards and stays informed on emerging legislation and industry best practices to maintain regulatory readiness.

Serves as the primary liaison for all ESG-related communications, engaging with internal and external stakeholders such as auditors, regulators, investors and rating agencies. It leads the implementation of the Group-wide stakeholder engagement plan and manages responses to ESG questionnaires and information requests.

Ensures the accuracy, consistency and credibility of all ESG disclosures, acting as the gatekeeper for data shared externally. It serves as the primary contact for internal and external audits on sustainability matters and maintains strong internal controls to support reliable ESG reporting and assurance processes.

Identifies sustainability and technical risks, proposing mitigation measures and supporting technical assessments related to Health, Safety and Environment activities. It contributes to the development and validation of energy transition scenarios, decarbonization roadmaps and action plans, while also reviewing technical inputs from external consultants to ensure alignment with ESG standards and regulatory frameworks.

Collaborates closely with Subject Matter Experts and Internal Audit to ensure timely and accurate ESG data collection and reporting. It supports the design, execution and monitoring of ESG-related projects and works across functions and sites to ensure consistent implementation of sustainability initiatives throughout the Group.

The Internal Control System (ICS) at MOTOR OIL Group consists of three core units: the Compliance Unit, the Risk Management Unit (RMU) and the Internal Audit Department. Together, these functions ensure effective corporate governance, regulatory compliance and risk mitigation across the organization.

The Compliance Unit ensures adherence to applicable laws, regulations and internal policies. It supports prudent decision-making by advising management and the Board, through the Audit Committee, on the Group's compliance status and emerging regulatory risks. The Unit ensures alignment with applicable laws and regulations, provides ongoing guidance to staff through internal policies and codes of conduct and promotes a strong ethical and compliance culture. It also ensures the Group adapts effectively to legal changes, helping to mitigate regulatory risk and identify potential business opportunities within the evolving compliance landscape. The Compliance Unit works closely with the Sustainability Unit to ensure alignment between regulatory compliance and the Group's ESG commitments.

The Risk Management Unit (RMU) identifies, assesses and manages risks across the Group. RMU maintains an effective risk management framework to support the ongoing development, implementation and enhancement of risk practices at the levels of systems, processes and organizational structure. The Unit maintains the corporate risk register - which includes ESG - related risks - and submits it along with an annual risk report to the Board of Directors highlighting significant risks and areas requiring action. Functionally reporting to the Board and administratively to the Deputy CEO, the RMU ensures that all business activities operate within established risk tolerance levels, covering risks across processes, systems and the Group as a whole. The Risk Management Unit works closely with the Sustainability Division to ensure that the ESG risk register is regularly updated, relevant departments have identified and assessed sustainability-related risks and their financial impacts and that appropriate mitigation measures are being developed and implemented across the Group.

The Internal Audit Division conducts independent audits to ensure that the Company and its subsidiaries operate in accordance with internal rules, the Articles of Association, Board decisions and approved governance manuals. It verifies compliance with job descriptions, procedures, the Manual of Authorities (MoA) and the organizational structure. The Internal Audit Department works in close coordination with the Sustainability Division to ensure the accuracy, integrity and reliability of ESG disclosures and sustainability-related processes. It provides independent assurance that sustainability controls are effectively implemented, ESG reporting aligns with internal policies and regulatory requirements and risks - particularly those related to sustainability - are appropriately monitored and managed.

Working Groups coordinated by the Sustainability division play a pivotal role in addressing IROs and implementing ESG related policies, plan, actions and targets. Each Working Group is cross-functional and may include representatives from various departments and subsidiaries, ensuring actively contribution to the Group's sustainability performance, transition planning and long-term ESG objectives.

Sustainability Representatives are appointed within each Group subsidiary or business unit to act as key intermediaries between local operations and the central Sustainability Division. This role will be enhanced to lead the implementation of ESG initiatives at the local level, collect and report data using the Group's ESG tool and ensure alignment with the Group's overall sustainability strategy and compliance obligations. They will manage local ESG activities, monitor performance and report progress to the central team.

1.3.2 Information provided to and Sustainability Matters addressed by the undertakings' Administrative, Management and Supervisory Bodies [GOV-2]

The organizational structure of the Group reflects a clear allocation of sustainability responsibilities across supervisory, management and administrative bodies, ensuring that material impacts, risks and opportunities (IROs) are systematically addressed throughout strategic planning, risk management and operational execution.

Supervisory Body – Board of Directors (BoD)

The Board of Directors and the relevant committees holds ultimate accountability for overseeing the Group's overall business and sustainability strategy as described in the previous section. They are informed minimum twice a year through dedicated sessions and updates from the Chief Sustainability Office, Risk Management Unit and executive leadership about (a) Material sustainability-related risks and opportunities; (b) Progress in due diligence implementation across environmental, social and governance (ESG) areas; (c) Key decisions related to long-term strategy, major transactions and investment plans that may have significant sustainability implications. The BoD evaluates these elements in the context of their potential financial and non-financial impacts, considering trade-offs and alignment with the Group's risk appetite and long-term objectives. Final approval for major transactions and capital-intensive projects - particularly those related to energy transition - is granted by the BoD after reviewing detailed analysis and risk assessments.

The Sustainability Committee supports the BoD as described in the previous section. The Committee is briefed at least once a year by the Chief Sustainability Officer (CSO), who serves as a convenor and strategic advisor, ensuring alignment across functions and subsidiaries. It also facilitates cross-departmental coordination on climate risks, ESG data and due diligence.

Management Body – Senior Management

General Managers are responsible for executing the Group's strategy across operations and for all business activities. Under the leadership of the CEO and Deputy CEOs, all divisions are actively involved in implementing the Group's sustainability agenda. Together with the Sustainability Division they contribute to identifying and assessing climate-related Impacts, Risks and Opportunities (IROs), ensuring that material sustainability factors are integrated into business planning.

The Sustainability Division coordinates sustainability policies and action plans, working closely with the management body. Additionally, all divisions support the definition and monitoring of sustainability KPIs which are reviewed by the General Manager to ensure alignment with the Group's strategic goals and continuous improvement.

Administrative Bodies – Sustainability Division, Risk Management Unit, Compliance and Internal Audit

The **Sustainability Division** operationalizes the Group's sustainability strategy by coordinating data collection, monitoring KPIs, supporting materiality assessments and leading stakeholder engagement. It collaborates with all the Groups' divisions forming working groups across ESG pillars to ensure timely and accurate ESG integration into the business model and long-term plans.

The **Risk Management Unit (RMU)** works closely with the Sustainability Division to ensure ESG risks are embedded in the corporate risk register. RMU ensures that business units identify financial implications of ESG risks and develop mitigation strategies, which are reported to the BoD.

The **Compliance Unit** works in close coordination with the Sustainability Division to monitor legal and regulatory developments in ESG, promote internal awareness and align policies with evolving standards such as the CSRD, ESRS and EU Taxonomy.

The **Internal Audit Division** provides independent assurance over ESG reporting, compliance processes and the integrity of sustainability-related controls and disclosures.

Material sustainability matters are embedded in the Group's key strategic and investment processes:

M&A transactions and Major Project Investments follow a structured governance pathway, from origination through approval by Senior Management and the BoD. ESG risks and due diligence are integrated throughout, including scenario planning and valuation assessments.

Long-Term Strategic Planning involves scenario-based forecasting and integration of sustainability performance targets. The Corporate Development and Strategy teams work with Planning & Budgeting (P&B) and Sustainability to ensure that ESG priorities, including decarbonization targets and climate transition planning, are reflected in the Group's forecasts.

During the reporting period, the administrative, management and supervisory bodies of the Group actively addressed a range of material sustainability-related impacts, risks and opportunities (IROs) identified through the Group's double materiality assessment process.

In total, the Group evaluated 38 sustainability-related impacts, of which 27 were assessed as material (13 Environmental, 9 Social and 3 Governance), along with 2 entity-specific impacts. Additionally, 41 sustainability-related risks and opportunities were identified, with 28 considered material (14 Environmental, 9 Social and 3 Governance).

Given the high volume and diversity of topics, these material impacts, risks and opportunities have been further grouped and categorized for clarity and will be presented in detail in the relevant section of this report.

These material IROs were reviewed and addressed as follows:

Supervisory Body (Board of Directors & Sustainability Committee): Oversaw the strategic implications of the identified IROs, particularly those with potential financial consequences. The BoD reviewed risks that could impact financial performance, cash flows and access to capital and ensured appropriate mitigation strategies were incorporated into business planning and investment decisions.

Management Body (Senior Management): Evaluated and monitored the integration of these material IROs into the Group's sustainability strategy and targets. The senior management also guided the implementation of ESG risk mitigation actions, including scenario planning for climate-related impacts and opportunities.

Administrative Bodies (Sustainability Division, Risk Management Unit, Compliance Unit): Collected, assessed and tracked performance related to material IROs. These teams played a key role in operationalizing the due diligence process, populating the ESG tool with relevant data, updating the ESG risk register and advising on both negative financial impacts and positive opportunities.

1.3.3 Integration of Sustainability-related Performance in Incentive Schemes [GOV-3]

The Remuneration Committee of MOTOR OIL Group, composed of three non-Executive Directors (two of whom are independent), oversees the Group's remuneration policy, which links executive compensation to both financial and non-financial performance criteria, including sustainability factors such as climate change and Health & Safety.

The policy includes a combination of fixed and variable components. Fixed remuneration is granted to all Directors, while variable pay - linked to Group performance and subject to General Assembly approval - includes bonuses and long-term share-based incentives such as stock awards and options. Independent Non-Executive Directors receive only fixed fees to preserve impartiality.

To ensure fairness and alignment with strategic goals, remuneration is benchmarked against industry standards and tied to indicators including profitability, growth and corporate social responsibility. The Remuneration Committee regularly reviews and updates the policy, which is valid for up to four years, to maintain competitiveness and integrity.

1.3.4 Integration of Sustainability-Related Performance in Incentive Schemes [E1.GOV-3]

The Group's Remuneration Committee, in collaboration with the Board of Directors and the Sustainability Committee, is integrating ESG objectives - such as GHG emission reduction - into the performance evaluation framework. The Sustainability Committee, supported by the Sustainability division, oversees the development and updating of relevant sustainability metrics.

Sustainability-related KPIs are progressively being embedded in remuneration policies, particularly within annual bonus schemes, aligning executive incentives with individual and corporate ESG goals. While the methodology is still being finalized, future disclosures will clarify the proportion of variable pay tied to these targets.

Long-term incentives, including stock awards and options, form part of the variable remuneration for executives (and, selectively, non-executives). These rewards are linked to both financial and non-financial performance, reinforcing the connection between sustainability outcomes and total compensation.

1.3.5 Statement on Due Diligence [GOV-4]

MOTOR OIL Group is committed to embedding sustainability into its governance structure, ensuring responsible business practices that align with regulatory frameworks such as the Corporate Sustainability Reporting Directive (CSRD) and European Sustainability Reporting Standards (ESRS). The due diligence process at MOTOR OIL Group is designed to identify, prevent, mitigate and account for actual and potential negative impacts on the environment and society.

MOTOR OIL Group has established a Sustainability Committee (SC), responsible for overseeing sustainability due diligence. This committee ensures:

Integration of sustainability into corporate strategy and risk management processes.

Establish clear roles and responsibilities for sustainability performance.

Compliance with international frameworks, including the UN Guiding Principles on Business and Human Rights and the OECD Guidelines for Multinational Enterprises.

The Group's Chief Sustainability Officer (CSO) collaborates with operational departments to execute sustainability policies and align them with business objectives.

MOTOR OIL Group integrates sustainability due diligence into all aspects of its operations, value chain and investment decisions. This includes:

Conducting risk and opportunity assessments to understand how sustainability factors impact financial performance.

Embedding Environmental, Social and Governance (ESG) criteria into procurement, supplier contracts and partnership agreements.

Implementing business ethics policies to detect and address unethical practices early.

Embedding Due Diligence into Internal Policies.

To ensure sustainability due diligence is part of daily operations, MOTOR OIL Group has developed and implements the following policies:

Whistleblowing and Ethics Policy – Encouraging employees and stakeholders to report unethical practices without fear of retaliation.

Anti-Corruption and Compliance Policy – Preventing bribery and corruption in business transactions.

Climate Adaptation and Carbon Management Policy – Mitigating environmental risks through investments in renewable energy and emissions reduction.

Supplier Code of Conduct – Setting social, environmental and human rights expectations for supply chain partners.

MOTOR OIL Group also leverages its due diligence framework to enhance stakeholder trust and long-term corporate resilience by aligning with double materiality principles (assessing both impact materiality and financial materiality).

	Core Elements of Due Diligence	Sections in the Sustainability Statement
A	Embedding due diligence in governance, strategy and business model	GOV-1, GOV-2
B	Engaging with affected stakeholders in all key steps of the due diligence	IRO-1 throughout the Sustainability Statement
C	Identifying and assessing adverse impacts	IRO-1 throughout the Sustainability Statement
D	Taking actions to address those adverse impacts	Actions chapters throughout the Sustainability Statement
E	Tracking the effectiveness of these efforts and communicating	Target chapters throughout the Sustainability Statement

1.3.6 Risk Management and Internal Controls over Sustainability Reporting [GOV-5]

MOTOR OIL Group's risk management and internal control processes related to sustainability reporting, form an integral part of the Group's broader risk management framework. In compliance with Law 4706/2020, the Group has established a comprehensive Internal Control System (ICS), encompassing the Internal Audit Unit (IAU), the Risk Management Unit (RMU) and the Regulatory Compliance Unit. The ICS framework includes key components such as Risk Management, Control Environment, Control Mechanisms and Risk Controls, Information and Communication Systems and Continuous Monitoring.

The Risk Management Unit (RMU) is involved in identifying, assessing and managing the risks faced by the Group. Its primary objective is to establish an effective risk management framework, ensuring the development, implementation and continuous enhancement of risk management practices at the process, system and corporate levels.

The RMU ensures that the risks undertaken by the Group's business units align with the risk appetite and tolerance levels set by senior management. The Unit reports functionally to the Board of Directors (BoD) and administratively to the Deputy CEO for matters related to daily operations.

The Board of Directors holds ultimate responsibility for ensuring the adequate and effective operation of the Group's Internal Control System, which is designed to identify, assess and manage material risks associated with the Group's business activities and operations.

The Group deploys the Three Lines Model, a governance structure that enhances risk management and accountability:

First Line of Defense: Business units that directly manage risks arising from their activities.

Second Line of Defense: Units such as the Risk Management Unit (RMU) and the Compliance Unit, which provide oversight, guidance and supervision to the first line.

Third Line of Defense: The Internal Audit Unit (IAU), which operates independently and evaluates the effectiveness of the risk management framework.

The RMU maintains regular communication with the Internal Audit Unit (IAU) to ensure alignment, enhance risk oversight and avoid duplication of efforts.

The risk assessment approach consists of three key phases:

Risk Identification & Evaluation – Identification of uncertainties, potential threats and opportunities, culminating in a comprehensive Risk Register.

Risk Response – Development of response plans, detailing existing controls and outlining additional measures to mitigate risks.

Risk Monitoring – Continuous oversight and assessment of risk management effectiveness.

Risk assessment is conducted at two levels: Inherent Risk Level (before controls) and Residual Risk Level (after controls). The Group categorizes and monitors identified risks in the Risk Register, structured according to the Group Risk Taxonomy, which includes the following risks:

Group Risk Taxonomy

Upon completing the Risk Identification and Assessment process, Risk Response Plans are developed for key risks, outlining existing controls and planning for enhanced risk mitigation measures. These plans are prepared by the relevant Business Units and evaluated by the Risk Management Unit (RMU).

Operational Units (First Line of Defense) continuously monitor risks within their areas of responsibility and submit periodic reports to RMU. RMU aggregates and analyzes reported data, conducts independent assessments of risk management procedures and ensures alignment between risk exposure and risk appetite set by the Board of Directors.

The Second Line of Defense Units (including RMU) further oversee the Risk Management System and conduct independent audits of First Line operations to ensure compliance and effectiveness.

Risk prioritization is based on quantified risk scoring, considering both the potential impact and likelihood of risks. Risks are systematically ranked and addressed based on their significance to the Group's critical business objectives, always in alignment with the Group's risk appetite and tolerance levels set by the Board of Directors.

By embedding strong risk governance, proactive monitoring and robust controls, MOTOR OIL Group strengthens its resilience, enhances decision-making and ensures long-term sustainable growth.

Regarding the internal control processes specifically related to sustainability reporting, including the double materiality assessment, the Sustainability division's ESG Controller has identified the relevant risks and control procedures applied for mitigating those risks.

The risk identification and assessment approach for sustainability reporting risks is directly associated with the overall framework applied by RMU, to ensure a consistent and comprehensive approach to risk management.

The risks and internal control procedures identified by the Sustainability division are incorporated into MOTOR OIL Group's ICS through their correlation with RMU's Risk Register to ensure its completeness and reliability.

Further, the Internal Audit Division executes independent assurance audit reviews upon the procedures followed by the Sustainability Division on a yearly basis, to ensure the adequacy and effectiveness of the internal controls mitigating the risks of the sustainability reporting process.

Risk catalogue

Regarding Sustainability Reporting, including the double materiality assessment, MOTOR OIL Group has identified several potential risks and has established the related controls, as follows:

RISK	CONTROL-A	CONTROL A DESCRIPTION	CONTROL-B	CONTROL-B DESCRIPTION	CONTROL-C	CONTROL-C DESCRIPTION
Incorrect Identification of Companies Included in the Sustainability Report	The Financial Division's competent department determines the total population of companies.	The ESG Controller receives the final, official and approved list of Motor Oil Group companies to be included in the consolidated Financial Statements.	Determination of each Group's activities and involvement through their representatives and subject matter experts (SMEs).	The ESG Controller ensures that each Group's representative and SMEs provide the necessary input for determining the Group's involvement in the Sustainability Report.		
Failure to Consider All ESRS Topics for Identifying IROs	Double Materiality Assessment is reviewed before finalization.	The ESG Controller reviews the Double Materiality Assessment for full compliance with ESRS before it is finalized.				
Failure to Use Prescribed ESRS Criteria for Evaluating IROs	Double Materiality Assessment is reviewed before finalization.	The ESG Controller reviews the Double Materiality Assessment for full compliance with ESRS before it is finalized.				
Unreliable Quantitative and Qualitative Information for Sustainability Reporting	Training for all input providers.	All providers of both quantitative and qualitative data participate in training sessions organized by the Sustainability Division.				
Delayed Quantitative and Qualitative Information for Sustainability Reporting	Training for all input providers.	All providers of both quantitative and qualitative data participate in training sessions organized by the Sustainability Division.	Timely reminders sent to all data providers.	Reminders are sent to all data providers prior to the due date.		
Inconsistent Data Ownership for Qualitative and Quantitative Information	Training for all input providers.	All providers of both quantitative and qualitative data participate in training sessions organized by the Sustainability Division.	Sustainability Representatives (per Group pillar) identify and provide the responsible data providers.	Sustainability Representatives (per Group pillar) identify and provide the responsible data providers.		
Failure to Comply with Local Legal Framework	Immediate updates on changes in domestic/ European legal frameworks from the Group's Compliance Unit.	The Group's Compliance Unit immediately informs the Sustainability Division of all changes in the domestic/European legal framework concerning ESG issues.	Sustainability Division members participate in local and international conferences.	All Sustainability Division members regularly participate in local and international sectoral conferences that provide timely updates on existing and forthcoming legislation.	Frequent updates to Motor Oil's Board and Sustainability Committee.	The Chief Sustainability Officer (CSO) frequently updates Motor Oil's Board and Sustainability Committee on all requirements derived from the need for compliance with legal and institutional frameworks.
Failure to Comply with European Directives	Sustainability Division members participate in local and international conferences.	All Sustainability Division members regularly participate in local and international sectoral conferences that provide timely updates on existing and forthcoming legislation.	Frequent updates to Motor Oil's Board and Sustainability Committee.	The Chief Sustainability Officer (CSO) frequently updates Motor Oil's Board and Sustainability Committee on all requirements derived from the need for compliance with legal and institutional frameworks.		
Incomplete Sustainability Report Content and Incompatibility with ESRS	Sustainability Report is reviewed before finalization.	The ESG Controller reviews the draft Sustainability Report for full compliance with ESRS before it is finalized.				
Failure to Meet ESG Targets	Data collection, processing and reporting.	The data collected, processed and reported are crucial for assessing the degree of achievement of ESG targets.				
Integration of Sustainability Targets with Corporate Strategy	Sustainability Committee.	The Sustainability Committee, as a BoD Committee, is regularly updated on the design and approval of ESG targets and their achievement. It plays a crucial intermediary role between all Group operations, including strategy.				
Stakeholder Engagement	Stakeholder Engagement Plan.	Stakeholder identification and mapping are conducted within the Double Materiality Assessment process, integrating their perspectives into strategic decision-making.				
Identification of Supply Chain	Value Chain Analysis.	A Value Chain Analysis is conducted within the Double Materiality Assessment process to cover all upstream and downstream stages and identify where significant sustainability impacts and risks occur.				

The findings from the risk assessment process, including elements related to sustainability reporting, are integrated into relevant internal processes through the development of risk management plans. These plans may involve acceptance, transfer, or reinforcement of existing controls to further reduce or mitigate risks. These plans are communicated to specific units as necessary.

Additionally, the findings from the risk assessment process, including sustainability reporting elements, are reported to the administrative, management and supervisory bodies through two channels:

Reporting obligations of the Risk Management Unit: The RMU submits an annual Risk Management Report to the Board of Directors, highlighting significant risks and areas requiring attention. The full risk and controls register contains information on risks faced at a Group level, incorporating data received from MOTOR OIL, subsidiaries and managed affiliates.

Reporting obligations of the Sustainability division: As mentioned earlier, the Group has established a Sustainability Committee responsible for approving and overseeing the Group's Sustainable Development Policy and Strategy. This includes Environmental, Social and Governance aspects that may impact overall strategy, investment plans, risk management, sales performance, mergers and acquisitions (M&A), or other major capital expenditures. The committee monitors performance against set targets and decides on corrective actions related to existing opportunities or risks.

1.4 Strategy

1.4.1 Strategy, Business Model and Value Chain [SBM-1]

MOTOR OIL Group is a diversified energy group comprising over 188 companies with a combined turnover of €12.2 billion, a workforce of more than 3,332 employees (incl. Associate companies) and a network of over 1,500 fuels stations across Greece, Cyprus and the Western Balkans. The Group's principal activities include oil refining and marketing of petroleum products both domestically and internationally, power generation across conventional and renewable energy sources and a diversified portfolio of circular activities.

Vision

To evolve into a leading Multi-Energy Group in Southeastern Europe, driving sustainable growth and innovation across the energy spectrum.

Mission

To operate efficiently, responsibly and profitably in the oil, gas and selected sectors, while actively investing in alternative energy sources-addressing evolving customer needs and contributing to the region's energy security and transition.

Core Principles

INTEGRITY
Upholding the highest ethical standards in everything we do.

PROFESSIONALISM & EFFECTIVENESS
Delivering excellence through expertise, accountability and continuous improvement.

SOCIAL RESPONSIBILITY
Creating long-term value for society through responsible business practices.

COMMITMENT TO EMPLOYEES
Fostering a safe, inclusive and empowering work environment.

ENVIRONMENTAL STEWARDSHIP
Minimizing environmental impact and supporting the energy transition.

TRANSPARENCY
Promoting open communication and trust with all stakeholders.

MERITOCRACY
Rewarding performance, talent and integrity.

MOTOR OIL Group has embarked on an ambitious energy transition program which will transform the Group into a sustainable, diverse, multi-energy leader in the region. The goal is to create services and solutions for customers and long-term value for the shareholders by investing diligently in the energy transition, while reinforcing its presence across traditional energy markets. Group's strategic pillars recognize the need for a reliable, sustainable and affordable energy mix; therefore, in 2022 the Group embarked on a €4.0 billion investment program across those pillars by 2030, directing more than €2.5bn towards low carbon energy projects and €1.5bn towards resilience, energy security and the enhancement of capabilities in conventional energy products.

MOTOR OIL Group ensures that the Group constantly evolves in order, to be in a position, to supply Fuels, Electricity and Recycled Resources to its customers at an affordable cost and on a dependable basis, positioning itself so it can best capture future commercial opportunities while achieving its energy transition targets.

FUELS	ELECTRIFICATION	CIRCULAR ECONOMY
Refining & Trading of Fuel Products Biofuels & e-fuels Petrochemicals	Renewable Power Generation Thermal Power Generation Energy Storage	Lubricants Regeneration Environment & Waste Management Energy From Waste
Fuel Retail Convenience Proposition Fleet Customer Solutions	Power & Gas Supply and Trading Energy Home Solutions E-mobility	Energy Crop Development Waste Oils Collection High-Energy Value Feedstock Collection

Fuels

MOTOR OIL Group believes that the energy mix of the future will include both fossil fuels as well as renewable and alternative fuels. It consistently invests in the production and distribution of these important products for consumers. Additionally, the Group continuously evolves its retail network, offering high quality products and decarbonization solutions, as well as a convenience proposition beyond the forecourt.

MOTOR OIL Group produce and supply its customers with:

- Conventional fuels such as gasoline and diesel, which continue to serve critical transport and industrial sectors;
- Sustainable fuels, including advanced biofuels and e-fuels, supporting decarbonization in hard-to-abate sectors like aviation and shipping;
- Petrochemicals, which remain vital for industrial and consumer products, and are increasingly integrated with circular practices.

Electrification

MOTOR OIL Group expects that the world will require significantly more electricity in the future and will be prepared to address this demand, offering power from both flexible conventional and renewable power sources. Concurrently, the Group will be offering sustainable electricity and gas products as well as e-mobility services to the customers through the retail platforms.

MOTOR OIL Group offers:

- Renewable and thermal power generation, contributing to reliable and affordable energy supply;
- Power and gas supply & trading, a fast-growing area leveraging our presence in electricity and natural gas markets;
- Energy storage and e-mobility, supporting grid stability and electric vehicle infrastructure;

Circular Economy

MOTOR OIL Group believes that in circularity lies a very efficient and clean solutions for truly sustainable growth. The Group invests in developing an integrated value chain starting at the feedstock level across product streams generating significant value for years to come.

The activities of MOTOR OIL Group in this domain include:

- Environment and waste management, ensuring responsible treatment and recovery of recyclable materials, as well as the production of renewable energy from waste;
- Lubricants regeneration, reducing waste and extending the lifecycle of valuable materials;
- High-energy value feedstock collection, supporting the production of low-carbon fuels and contributing to the Group's decarbonization roadmap.

The total number of employees is 3,332 employees including employees from Associate companies (63 employees in Greece). These employees are allocated in Greece (3.246), Cyprus (21), Romania (8), Bulgaria (9), Serbia (7), Croatia (39), Skopje (1) and America (1). The total number of employees, excluding those from Associate companies, is 3,269, as stated in 'Note 1: General Information' of the Financial Statement. Additionally, the Group has established itself as a key player in renewable power generation, operating one of the largest portfolios in the region in terms of installed capacity. In line with its commitment to sustainability and innovation, the Group has expanded into the circular economy and alternative fuels sector, making strategic acquisitions in biofuels and waste management.

The Group is committed to:

- Unwavering focus on strong execution targeting operational excellence, improved profitability under all commodity environments and disciplined value-accretive investments.
- Development of platforms of sustainable growth across the energy spectrum, including in areas of renewable energy production and environmental services.
- Delivering value to its shareholders, by maintaining strong cash flow generation and prudent management of the Group's financial resources.

Retail Network Highlights

~1,500
Fuel Stations

A robust and strategically positioned retail network across the region.

~35%
Market Share

Significant presence in Greece's automotive fuel market.

Network Breakdown

GREECE

~650
AVIN Fuel Stations

~800
Coral Fuel Stations

BALKANS & CYPRUS

~90
Coral Fuel Stations

The Group is engaged in various business sectors, including:

Oil refining (> 200 kboe per day) and the production of a wide range of products such as gasoline, middle distillates, bitumen, paraffin, sulphur and lubricants.

Wholesale and direct sales of petroleum products via CORAL, CORAL GAS, AVIN OIL and their subsidiaries via a network of 1,500 stations in Greece and internationally.

Renewable energy generation via MORE and its subsidiaries, focusing on wind, solar and energy storage with a RES portfolio of projects exceeding 800 MW installed capacity.

Electricity production through participations in two gas-fired power plants (Korinthos Power 437 MW, THERMOILEKTRIKI KOMOTINIS 877 MW).

Electricity and natural gas supply, along with electromobility and micromobility services, through NRG.

Construction and operation of environmental and waste management infrastructure through THALIS and HELECTOR.

Regeneration, production and sale of lubricants through LPC.

Biodiesel production and distribution, as well as used cooking oil (UCO) collection, through VERD and its subsidiary PRADINO LADI.

Development of projects for the production of renewable hydrogen via Hellenic Hydrogen.

Supply and storage of aviation fuel and aircraft refueling services via OFC.

1.4.2 Group Structure

Please refer to the 'Director's Report', specifically Section 5 titled 'GROUP STRUCTURE – SIGNIFICANT SUBSIDIARIES & AFFILIATED COMPANIES'.

Value Chain

MOTOR OIL Group provides a wide range of products and services. These include refined fuels such as gasoline, diesel and jet fuel; lubricants; energy products such as natural gas and electricity, focusing on renewable energy; environmental services such as waste management and recycling initiatives; and technical and maintenance services including engineering, safety and environmental compliance services.

The Group serves a wide range of markets and customer groups. In the automotive sector, it serves individual consumers, automotive service providers and fleet operators. The industrial sector includes manufacturing and power generation companies. The commercial sector includes retail stations, wholesalers and distributors. The residential sector serves households with natural gas and electricity. In addition, the environmental sector includes municipalities, local governments and environmental project developers.

The business value chain of MOTOR OIL Group and its subsidiaries comprises several key stages, from the procurement of raw materials to the final consumption and disposal of products. The value chain is divided into upstream, own operations/midstream and downstream activities.

Upstream

The raw material supply phase involves the procurement of crude oil, feedstocks, catalysts, additives and other chemicals necessary for refining processes. Key resources such as electricity, water and natural gas are utilized in the production process. Logistics activities include the transportation of raw materials and their storage.

Midstream – Own Operations

The refining process, which is central to the value chain, involves converting crude oil into various products, ranging from liquified gases, naphtha, gasoline, diesel, jet fuel, lubricants etc. This process necessitates advanced refining technology and strict adherence to safety and environmental compliance standards. Continuous maintenance and engineering services are crucial to ensure the smooth operation of refining process.

Once refined, the products are distributed to wholesalers and retailers. This phase involves coordinating logistics for transporting refined products to various distribution points. Finally, sales and retailing activities involve selling refined products directly to consumers, as well as providing fuel cards and retail outlets.

Downstream

The consumption and use phase involve the utilization of the final products by consumers, vehicles and industries. This phase includes monitoring the performance of the products and gathering feedback to improve future offerings. End-of-life management encompasses the handling of used oil and lubricants, with recycling initiatives implemented to ensure environmentally responsible disposal.

Main Features of Upstream and Downstream Value Chain

The upstream value chain of MOTOR OIL Group encompasses the supply of raw materials, resource utilization and logistics. Key components include:

- Sourcing crude oil, feedstock and essential chemicals required for refining processes
- Optimizing the use of electricity, water and natural gas to enhance efficiency in production operations
- Managing the transportation and storage of raw materials and refined products to ensure a seamless supply chain

MOTOR OIL Group's downstream value chain focuses on the distribution, consumption and end-of-life management of products. Key components include establishing efficient logistics and distribution networks to deliver refined products to wholesalers and retailers, ensuring timely availability, facilitating the use of products by various customer segments, incorporating monitoring and feedback mechanisms to continuously improve product offerings and implementing recycling initiatives and environmentally responsible disposal methods for used products, such as oil and lubricants, to minimize environmental impact.

UPSTREAM ACTIVITIES	
Materials	Crude oil, feedstocks, catalysts, additives, and other chemicals for refining. Materials for environmental projects (e.g., construction materials).
Resources (Energy, Water, Fuel)	Natural gas, and renewable energy sources (wind, solar, waste) for power generation. Natural gas for heating, power generation and process. Electricity and water for cooling and heating. Water for plant operations and environmental projects.
Financial Capital	Sources of financial capital, - Group profits and balance sheet - Debt financing - Public markets financing Uses of financial capital: projects that align with group strategy and meet long-term return thresholds
Logistics	Procurement of crude oil/feedstock for refining; natural gas and electricity distribution infrastructure. Storage facilities for products and logistics for environmental project materials.
Services (Technical Support)	Maintenance and engineering services for refining, retail, power generation and energy supply & solutions. Safety and environmental compliance services. Environmental consultancy, technical support for projects, and real estate management services.

OWN OPERATIONS		
	Activities	**Customers**
Sourcing & Production	Supply, Refining & Trading of Fuel Products Biofuels & e-fuels Petrochemicals Waste Oils Collection High-Energy Value Feedstock Collection Energy Crop Development	Transportation Shipping Aviation Industry Chemicals Households Group needs
Power Generation	Renewable Power Generation Thermal Power Generation Energy from Waste	
Storage & Infrastructure	Fuel Storage & Distribution Services Energy Storage	
Distribution & Retail	Fuel Retail Power & Gas Supply & Trading Convenience Proposition (e.g., retail shops at stations) Fleet Customer Solutions	
Customer Solutions	Energy Home Solutions E-mobility Support & Maintenance Lubricants Regeneration Environment & Waste Management	

DOWNSTREAM ACTIVITIES	
Product Supply	Supply of refined products (gasoline, diesel, jet fuel) to wholesalers and retailers. Supply of electricity and natural gas to residential and commercial customers.
Consumption - Retailing	Supply and marketing of fuels to end customers. Supply and marketing of electricity and natural gas to end customers.
Consumption - Lifecycle Use Phase	Fuel use by household, transportation and industrial consumers. Use of natural gas and electricity by household and industrial consumers.
Consumption - Lifecycle End of Life	Management of used oil and lubricants and recycling initiatives.

Business Model and Value Creation

MOTOR OIL Group has strategically evolved its business model into a diversified, multi-energy platform, integrating traditional operations with renewable energy, electrification and circular economy activities. Its integrated business model is designed for resilience and future readiness, leveraging innovation and operational excellence to deliver value across a transitioning energy landscape.

This transformation has produced tangible outputs and outcomes that deliver sustained value to customers, investors and broader stakeholder groups:

Capital Type	Key Inputs		Key Outputs		OUTCOMES (Stakeholder Benefits)
Financial Capital	Total equity (Group)	2,758,787 th. €	Total consolidated income (Group)	287,314 th. €	Robust returns for investors, reinvestment capacity, financial resilience
	Net debt (Group)	1,728,913 th. €	EBITDA (Group)	966,595 th. €	
Productive Capital	State of the art refinery (12.61 NC Complaxity)	~200 th. Barrels per day operating capacity	Products produced (MOH Refinery)	9,009 thousand mt	Diversified energy offering, cost efficiency, alignment with EU Taxonomy
	Taxonomy aligned investments	139,802 th. €	Products produced (LPC)	91,384 mt	
	Total CAPEX (Group)	315,021 th. €	Product produced (VERD)	28,515 mt	
	Biogenic feedstock for bio-fuels production	29,766 mt	Total EV charging points	1,629	
	Waste lubricant oils directed to regeneration	34,137 mt	Taxonomy aligned CAPEX (Group)	44.38%	
			Taxonomy aligned revenue	394,671 th. €	
Natural Capital	Electricity consumption	2,719.74 TJ	CO_2e avoidance from RES	820,668 tonnes	Reduced emissions, climate resilience, improved stakeholder perception
	RES capacity (operational)	839 MW			
Human Capital	Employees	3,332 (incl. 63 employees from Associates)	Employee turnover	8.01%	Skills development, retention, improved H&S, increased productivity
	Training hours	123,363.40	Percentage of employees who received performance evaluation review	99.87%	
Intellectual Capital	Investments on innovation and digital transtormation	18,225 th. €	Goodwill (Group)	183,039 th. €	Innovation, tech adoption, ESG-aligned solutions
	Environmental research projects submitted	33	Success rate on research projects submitted	11%	
Social Capital	Sponsorships given to local communities and societies	6,313 th. €	Taxes paid (Group)	369,654 th. €	Local partnerships empowerment
	Total procurement costs	10,377,795 th. €	Procurement budget paid on local suppliers	2,595,145 th. €	

The following mapping demonstrates the Group's interconnected value creation approach and illustrates how various actors across the supply chain contribute to or are affected by the Group's strategy:

Value Chain Stage	Strategic Pillar / Activity	Key Stakeholders Engaged
Upstream	Fuels – Crude oil sourcing, bio-feedstock procurement	Suppliers, trading partners, regulators (for biofuels), environmental NGOs
	Electrification – Equipment & tech sourcing for RES & storage	Technology providers, regulators, local authorities, contractors
	Circular Economy – Waste feedstock and oil collection, crop sourcing	Waste suppliers, municipalities, collection partners, farmers, communities
Own Operations	Fuels – Refining, petrochemicals, biofuel production	Employees, unions, local communities, regulators (HSE), auditors
	Electrification – Renewable & thermal power generation, energy storage	Employees, JV partners, local communities, environmental authorities
	Circular Economy – Waste management, lubricant regeneration, Energy from Waste	Facility workers, contractors, environmental agencies, recyclers
Downstream	Fuels – Retail, convenience services, fleet solutions	End-users, B2B customers, retailers, fuel card customers, logistics providers
	Electrification – Power & gas trading, energy supply, EV charging	Residential & commercial customers, grid operators, e-mobility clients, investors
	Circular Economy – Recycling services, circular product delivery	Industrial clients, waste clients, sustainability auditors, certification bodies

Sustainability Strategy

At MOTOR OIL Group, sustainability is not a standalone initiative - it is fully embedded within the corporate strategy, guiding investment decisions, operational priorities and long-term value creation across its entire business ecosystem. The Group is committed to promoting sustainable development, fully aligned with key global initiatives such as the European Green Deal, the Paris Agreement and the United Nations Sustainable Development Goals (SDGs). Group's sustainability strategy aims to provide investors with a comprehensive understanding of the risks and opportunities associated with their investments.

MOTOR OIL Group Sustainability Policy serves as the foundation of its sustainability strategy - providing the principles, commitments and governance framework as follows:

Decarbonization & Energy Transition: MOTOR OIL Group is implementing an accelerated energy transition plan to transform the Group into a diversified regional energy leader. This includes investments in innovative sustainable technologies, pioneering the adoption of renewable energy sources and enhancing energy efficiency for both Group's operations and customers.

Stakeholder Engagement & Materiality: The Group prioritizes engagement with stakeholders to understand their needs, concerns and expectations. By identifying and addressing key ESG issues related to MOTOR OIL Group activities, it strives for continuous improvement in Group's sustainability performance.

ESG Impact Assessment & Taxonomy Alignment: The Group conducts rigorous ESG impact assessments to ensure compliance with industry standards and regulatory requirements. MOTOR OIL Group operations align with recognized taxonomies, promoting transparency and comparability in the sustainability performance.

ESG Policies & Procedures: MOTOR OIL Group has implemented robust ESG policies and procedures that guide Group's operations and decision-making processes. These policies emphasize ethical conduct, environmental stewardship and social responsibility.

Corporate Governance: The Group is committed to strong corporate governance practices that promote transparency, accountability and integrity throughout Group's business operations.

Monitoring Goals & Performance Indicators: MOTOR OIL Group sets clear and ambitious targets, supported by key performance indicators (KPIs) to track Group progress in sustainability. Through regular assessments and reporting, the Group identifies areas for improvement and drive meaningful change.

Climate & ESG Risk Management: The Group proactively manages ESG and climate-related risks, safeguarding its business and stakeholders. This involves integrating risk management practices into the strategic planning and implementing mitigation measures to address potential impacts.

Transparency, Reporting & Communication: The Group is committed to transparent communication of its initiatives, challenges and achievements through comprehensive reporting mechanisms, ensuring that stakeholders remain well-informed.

ESG Ratings	Performance
ecovadis	**Silver medal** (top 15%)
CDP	**B** (Climate & Water Security)
S&P Global Ratings	**52/100**
ATHEX ESG Data Portal	**94%**
ISS ESG	**C+**
SUSTAINALYTICS	**30.9**

MOTOR OIL Group has launched one of the most ambitious Energy Transition initiatives in Southeastern Europe, aiming to evolve into a Sustainable, Diversified, Multi-Energy leader in the region. Group's strategy focuses on delivering innovative energy solutions that meet the evolving needs of the customers while generating long-term value for the shareholders. By strategically investing in the energy transition, the Group is proactively adapting to the changing energy landscape.

The Group's diversified strategy aligns with society's demand for a reliable, sustainable and cost-effective energy mix. To support this strategy, MOTOR OIL Group has committed to a €4.0 billion investment program by 2030, with over €2.5 billion allocated to low-carbon energy projects and €1.5 billion dedicated to enhancing resilience and upgrading its infrastructure.

Refinery Optimization and Continuous Improvement

The Group's refinery plays a critical role in the energy transition by ensuring the production of essential fuels while integrating sustainability into its operations. To maintain efficiency, reliability and environmental responsibility, the Group continuously invests in projects aimed at optimizing refinery performance, upgrading product quality and reducing environmental impact. Key initiatives include:

1. Completion of the Naphtha Processing Complex, enhancing the refinery's ability to produce higher-value products.
2. Investment in a new propylene production unit, diversifying its portfolio beyond traditional fuel-based products.
3. 160,000 tpa propylene production unit diversifying the refinery's product mix. Construction to be completed by 2025.
4. Storage capacity expansion to be completed by 2025 (>40,000 m^3).
5. New port facilities (Athina) to materially expand processing, storage and trading capacity (>5 mn tons throughput potential).
6. Development of >250,000 tpa advanced biofuel production program.
7. Integration of 67 MW dependable efficient generation capacity to reinforce resilience.
8. Implementation of digital transformation, energy efficiency and renewable energy projects to enhance operational performance.

E-Mobility and Retail Expansion

Through MOTOR OIL's subsidiaries, the Group offers integrated solutions across three key areas: Mobility, Convenience and Energy for Home & Business.

In Mobility, the Group installed 1,629 publicly accessible charging points by 2024 and is driving the transition to electric transportation by deploying over 4,000 EV charging stations by 2030, while continuing to expand its network of conventional service stations.

In Convenience, MOTOR OIL Group is redefining fuel stations as multi-service destinations by forming strategic partnerships with leading retail brands. In 2023, the Group introduced Smartshop standalone stores, offering a diverse range of products and services beyond traditional fuel stations. In 2024 two (2) standalone concept convenience stores are operating in Athens and 25 more to be added following the completion of the Twenty4Shopen transaction.

To enhance customer experience, the Group is developing the "gas station of the future", integrating advanced non-fuel services, low-carbon fuels and hydrogen.

Through MOTOR OIL's subsidiary NRG, the Group provides affordable energy solutions while promoting energy efficiency for homes and businesses. In 2024, 2.6 TWh of electricity are distributed to customers.

With these initiatives, the Group emphasizes on providing high customer experience, bringing innovative solutions and greater accessibility to energy services.

Expansion in Renewable Energy

As a response to society's increasing demand for cleaner energy, the Group has established itself as one of the largest renewable energy producers in Greece and the broader region.

Over the past four years, MOTOR OIL Group have expanded operational capacity to 839 MW and developed a robust project pipeline 2.7 GW.

The Group's objective is to further strengthen MORE renewable energy business, with a target to surpass 2.0 GW in operational capacity and exceed €250 million in EBITDA by 2030.

Through these investments, the Group aims to solidify Group's position as a leading producer and provider of renewable energy in the region.

Alternative Fuels and Circular Economy

Leveraging Group's expertise in complex industrial processes, the Group is developing alternative fuels and expanding its circular economy initiatives to promote resource efficiency and sustainability.

Key focus areas include:

Natural Gas, Low-Carbon Hydrogen and Advanced Biofuels as part of MOTOR OIL Group alternative fuels' strategy.

Recycling, Waste Management, Biofuels Feedstock Development and Lubricant Regeneration, supporting the circular economy transition.

Recent milestones include:

Investment in biofuels through VERD and PRASINO LADI, focusing on biodiesel production and waste cooking oil/animal fats collection.

Creation of HELLENIC HYDROGEN SA, a joint venture with PPC SA, developing Greece's first electrolysis projects for hydrogen production.

Integration of THALIS, enhancing capabilities in solid and liquid waste treatment, energy conservation and RES applications.

Acquisition of HELECTOR enhancing of biogas production prospects up to 32 MW from waste treatment.

Advancement of the Blue Med program, which will play a key role in developing Greece's hydrogen economy, generating economic and environmental benefits while strengthening the country's energy security.

Operation of one of Southeastern Europe's largest lubricants refineries, through LPC, specializing in used lube oil regeneration and lubricant production.

Construction of the 877 MW CCGT Power Plant in Komotini, a state-of-the-art natural gas facility with efficiency levels of up to 64%. The plant is designed to integrate hydrogen as a fuel, ensuring long-term sustainability and competitiveness in a transitioning market. Developed in partnership with GEK Terna, the plant begun operations in 2024.

As part of its long-term commitment to sustainability, MOTOR OIL has set clear environmental, social and governance (ESG) goals to drive responsible growth and value creation. These objectives align with global sustainability trends, stakeholder expectations and regulatory requirements, ensuring that the Group continues to evolve in a way that benefits both the business and society. The following table outlines MOTOR OIL's key sustainability targets and commitments across its operations.

CATEGORY	GOAL	TARGET	TIMEFRAME
ENVIROMENT	Reduce Scope 1 & 2 emissions by 30% (2021 baseline)	30% reduction	By 2030
	Scope 3 emissions	25% reduction**	By 2030
	Further development in renewable energy	2 GW capacity	By 2030
	Advanced biofuel production program	250 kta	Ongoing
	Low-carbon hydrogen production	60 kta	By 2029
	E-methanol production	25 kta	By 2029
	Biodiesel production from biogenic feedstock	200 kta	Ongoing
SOCIAL	Zero fatalities & zero major industrial accidents	Safety-first culture	Ongoing
	Strengthen safety culture through continuous training	Leadership & safety programs	Ongoing
	Achieve European Sector Benchmarking Level - LWIF (2nd Quartile)	Lost Workday Incident Frequency	Ongoing
	Achieve European Sector Benchmarking Level - PSER (2nd Quartile)	Process Safety Event Rate	Ongoing
	Expand electromobility infrastructure	>4.000 charging points	By 2030
GOVERNANCE	Zero compliance fines	Full regulatory adherence	Ongoing
	100% participation in business ethics training programs	Employee engagement	Ongoing

**According to market outlook predictions that are based on data from IEA for the global energy demand and global oil demand and National Energy and Climate Plan for the Greek market outlook of NG for Net Zero Scenario.

Revenue

Comprehensive financial data for the Group's operating segments for the year ending 31 December 2024 is provided in the Consolidated Financial Statements.

The table below outlines the activities and revenue sources in which the Group is active:

Description	2024
Total revenue (th.€)	**12,187,917**
Revenue from coal activities	0
Revenue from oil activities	11,297,042
Revenue from gas activities	419,654
Revenue from Taxonomy-aligned economic activities related to fossil gas	0
Revenue from fossil fuel (coal, oil and gas) sector	11,716,696
Revenue from chemicals production	0
Revenue from controversial weapons	0
Revenue from the cultivation and production of tobacco	0

1.4.3 Interests and Views of Stakeholders [SBM-2]

At MOTOR OIL Group, stakeholder engagement is an ongoing and fundamental process that fosters trust, transparency and mutual value creation. The Group defines stakeholders as all individuals, groups and entities that have an influence on, or are influenced by, its operations. This engagement is continuous throughout the year and is managed across multiple functions at the Group level to ensure effective communication and collaboration.

Recognizing the importance of strong relationships with stakeholders, MOTOR OIL Group companies actively maintain open and constructive dialogue with all key stakeholder groups. MOTOR OIL Group is dedicated to transparent reporting of sustainability performance, except for cases where confidentiality is required due to business-sensitive information. Given the scale and complexity of the operations and the broad network of stakeholders involved, engagement is an evolving and structured process aimed at identifying, addressing and mitigating potential and actual negative impacts.

A key priority has been the engagement of the Group's employees, who represent its most valuable asset. Beyond conducting materiality assessments, MOTOR OIL Group's workforce and Sustainability Committee are regularly involved in ESG-related discussions, ensuring they are informed about material sustainability issues and performance reviews.

Moreover, investors, suppliers and customers are kept up to date on Group's sustainability performance through the annual sustainability reports (the sustainability statement integrated in the Group's annual report from 2024 onwards). The Group also engages in reciprocal communication by responding to ESG-related questionnaires from key stakeholders such as banks, investors, suppliers and clients, enabling an ongoing dialogue and ensuring alignment with stakeholder expectations.

Looking ahead, MOTOR OIL Group is committed to enhancing stakeholder engagement by expanding its consultation efforts to include a wider range of stakeholders in the target-setting process, ensuring that sustainability commitments effectively address potential negative impacts. As part of this initiative, the Group aims to strengthen its Supplier Code of Conduct and introduce ESG-specific questionnaires for suppliers, helping assess and manage risks and opportunities within the Group's value chain.

Key stakeholder [SBM-2 45 a(i), AR 16]	Ways of engagement [SBM-2 45 a(ii), AR 16	Key issues of interest	Ways of respond

Stakeholder Engagement and Business Model

MOTOR OIL Group continuously adapts its strategy and business model to align with sustainability goals and the evolving expectations of its stakeholders. The Group assesses and refines its approach through due diligence processes and materiality evaluations to ensure long-term resilience and competitiveness.

To address stakeholder interests and concerns, MOTOR OIL Group has introduced strategic modifications, focusing on enhancing operational efficiency, expanding into renewable energy and investing in low-carbon technologies. Planned initiatives include further developments in electromobility infrastructure, biofuel production and energy storage solutions, with specific implementation timelines set to drive sustainable growth. These measures are expected to influence stakeholder relationships by fostering stronger engagement and trust. A key part of this approach is Internal and External Stakeholder Engagement.

MOTOR OIL Group recognizes that its own workforce is a key group of affected stakeholders and their interests, views and rights, including the respect for human rights, are integral to shaping the Group's strategy and business model. MOTOR OIL Group engages its employees through structured dialogues, feedback mechanisms and regular consultations, ensuring their voices are considered in decision-making processes. The Group actively integrates workforce-related insights into its strategic planning, fostering an inclusive work environment and reinforcing its commitment to fair labor practices and human rights protections. This approach not only supports employee well-being but also strengthens the Group's long-term resilience and sustainable growth strategy.

Additionally, MOTOR OIL Group places great emphasis on regular consultations with local communities, regulatory bodies and non-governmental organizations (NGOs) to ensure inclusive decision-making that considers the concerns and needs of those affected by its operations. This continuous dialogue helps strengthen relationships and ensures that the Group remains responsive to external expectations and requirements. Additionally, MOTOR OIL Group has established an Incident Reporting Framework to ensure transparency and accountability. By openly reporting any negative impacts or incidents to stakeholders and the public, the Group fosters trust and demonstrates its commitment to addressing issues in a timely and responsible manner.

MOTOR OIL Group ensures that its governance bodies, including executive management and supervisory boards, remain well-informed about stakeholder perspectives and sustainability-related impacts. This is achieved through regular reporting, stakeholder consultations and integrating sustainability considerations into strategic decision-making processes.

1.4.4 Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model [SBM-3]

MOTOR OIL Group's double materiality assessment has revealed a range of material impacts, risks and opportunities that reflect the nature of its integrated multi-energy operations and its strategic transition toward sustainability. These material issues are concentrated across the upstream, own operations and downstream stages of the Group's business model and value chain.

In the upstream segment, material topics are associated with the procurement and use of natural resources, including crude oil, natural gas, feedstocks, water and energy inputs. The sourcing and transportation of these materials, along with reliance on electricity, water and chemicals for refining and environmental projects, create material environmental risks. Additionally, the use of financial capital to fund large-scale infrastructure, renewable projects and remediation efforts introduces financial and strategic exposure.

Within own operations, the Group's refining activities account for many of its material negative environmental and social impacts. These include greenhouse gas emissions, air and water pollution, use of hazardous substances and occupational health and safety risks due to the inherent complexity and hazards of refining and energy generation processes. However, this is also where the Group's most transformative sustainability opportunities are concentrated, such as investment in renewable energy, the circular economy, innovation and decarbonization. Material positive impacts stem from actions such as co-processing biofuels, producing low-carbon hydrogen, regenerating lubricants, managing waste and installing renewable power generation and storage infrastructure at the site level.

The downstream value chain contains risks related to emissions from fuel consumption, product lifecycle environmental effects and biodiversity concerns tied to infrastructure development such as wind parks. On the opportunity side, customer-facing platforms, including retail fuel stations, electric vehicle (EV) charging infrastructure and non-fuel services, offer pathways to decarbonized transport and sustainability-linked customer engagement. Circular initiatives - such as used oil collection and lubricant regeneration - extend sustainability beyond the consumer phase, into end-of-life product handling and recycling.

The presence of these impacts and risks has influenced MOTOR OIL's Group strategic trajectory. Over the past two years, the Group has significantly expanded its activities in renewable energy, low-carbon fuels and circular economy solutions. Key strategic shifts include large-scale investments in solar and wind generation, green hydrogen, carbon capture and storage technologies and waste management infrastructure. These investments are reshaping MOTOR OIL's long-term asset portfolio and resource allocation, aligning the business model with the anticipated demands of a decarbonized economy and future regulatory conditions.

The Group's material negative impacts directly affect people and the environment through emissions and industrial hazards. Conversely, its positive impacts include improved air and water quality, enhanced biodiversity through reforestation programs and stakeholder value creation via local investment and workforce development.

Most environmental and climate-related impacts and opportunities are considered long-term, such as GHG reduction through CCS and hydrogen investments while innovation- and customer-related opportunities may yield benefits over mid- to long-term horizons. The Group is directly involved in these impacts through its operations and indirectly through its suppliers, contractors and customers. For example, Scope 3 emissions, biodiversity effects from infrastructure projects and lifecycle product impacts reflect indirect linkages to the Group's broader ecosystem.

Financially, these material risks and opportunities already exert tangible effects. The Group has quantified their impact in terms of required capital deployment, earnings sensitivity and long-term value creation potential. The transition toward a lower-carbon, more diversified energy portfolio requires significant investment, with up to €2.5 billion planned for energy transition initiatives, including renewable infrastructure, low-carbon fuels and decarbonization technologies. While transition-related risks, such as rising compliance costs and technology costs, could impact EBITDA in the near term, MOTOR OIL's Group strategy is focused on capturing upside from non-fossil activities, which are targeted to contribute more than 40% of group EBITDA by 2030.

The resilience of the Group's business model has been shaped by and continues to evolve in response to sustainability matters. Through its diversified portfolio, digital transformation initiatives and operational flexibility, the Group is actively adapting to sustainability-related risks and impacts while capturing emerging opportunities. Key environmental and social factors - particularly those related to the low-carbon transition - are embedded into strategic decision-making and business planning. As such, sustainability considerations influence the Group's strategy, enabling MOTOR OIL to strengthen its long-term financial performance while contributing to climate goals and broader sustainability outcomes.

The tables that follow provide brief descriptions of these significant impacts and risks. More detailed information on how the Group manages these issues is provided in the relevant sections of this report.

Short-term | Mid-term | Long-term | Positive | Negative

IMPACTS

Topic	Description	Characterization	Value chain		
			Upstream	Own operations	Downstream
Climate change	**Climate change mitigation** GHG Emissions from Oil refining, distribution and use contribute to ongoing air quality issues and environmental degradation.	⊖ Long-term			
	Climate change mitigation Investment in renewable energy projects, such as solar and wind power and alternative fuels, promotes cleaner energy and decreases greenhouse gas emissions. Furthermore, Exploring onsite renewable energy and purchasing RECs reduces carbon emissions, promotes clean energy, conserves resources and supports global sustainable development goals.	⊕ Long-term			
	Energy The inherent use of significant amounts of energy for day-to-day operations leads to increasing pressure on energy-related resources.	⊖ Long-term			
Pollution	**Pollution of air** The processing of fossil fuels typically releases large amounts of several pollutants (excluding GHG emissions) in the atmosphere, which worsens climate change and leads to environmental degradation.	⊖ Long-term			
	Substances of concern or very high concern Refinery operations involve the use of substances of concern, including hazardous chemicals, heavy metals and other contaminants, which have the potential to negatively impact the environment and human health.	⊖ Long-term			
Water and marine resources	**Water** Water is essential for operations like heating, cooling and firefighting in industrial processes. This usage draws significant water resources, potentially impacting local availability for communities and ecosystems during high demand.	⊖ Long-term			
Biodiversity and ecosystems	**Direct impact drivers of biodiversity loss** The establishment of refineries, storage facilities and transport infrastructure like pipelines often leads to significant land degradation, altering critical wildlife habitats and reducing biodiversity by converting natural areas into industrial zones.	⊖ Long-term			
	Impacts on the extent and condition of ecosystems Forest programs that include nurseries and reforestation efforts, along with ginning plants, positively impacts ecosystems by restoring habitats, improving biodiversity and enhancing carbon sequestration, which benefits the environment overall.	⊕ Long-term			
	Impacts on the state of species Managing wind parks and other assets located in protected areas poses a notable risk to biodiversity. During both the setup and operational phases of renewable energy activities, there is a risk of harming specific species and the area's overall biodiversity richness.	⊖ Long-term			
Resource use and circular economy	**Waste** The generation of hazardous and non-hazardous waste poses a significant environmental risk, leading to the contamination of soil and groundwater.	⊖ Long-term			
	Waste In commercial operations, solar parks and wind farms generate waste primarily due to the finite lifespan of materials used. The disposal of end-of-life batteries is also expected to contribute significantly to waste, necessitating robust management solutions.	⊖ Long-term			
	Waste Repurposing waste within the group involves companies that focus on transforming by-products and discarded materials into valuable resources. This strategy not only reduces landfill contributions but also promotes sustainability and resource efficiency across operations. Waste management companies have a positive impact by promoting recycling, reducing landfill waste and implementing sustainable disposal practices.	⊕ Long-term to Mid-term			
Own workforce	**Working conditions** Despite stringent safety measures, the oil and gas industry remain high-risk due to complex machinery and volatile substances. Inherent risks include explosions, fires, chemical leaks and falls, which pose significant environmental and human health impacts.	⊖ Long-term to Mid-term			
Entity specific	**Innovation and digital transformation** Incorporating innovation and digital transformation projects aims to accelerate the Group's efficiency and improve performance. These initiatives target the elimination of negative impacts while enhancing positive effects on the economy, environment and society. Additionally, they include the introduction of new, innovative products and services to the market.	⊕ Long-term to Mid-term			
	Security and emergency preparedness Measures are implemented to ensure the highest security and emergency preparedness and response, fully complying with the relevant national and European legislation and regulations.	⊕ Long-term			

Short-term Mid-term Long-term Opportunity Risk

RISKS & OPPORTUNITIES

Topic	Description	Time horizon	Affected risk pillars	Characterization
Climate change	**Climate change adaptation** The acceleration of climate change through oil and gas activities poses financial risks from potential regulatory fines, increased insurance costs and liability for environmental damage and higher adaptation costs.	Short-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	RISK
	Climate change mitigation The emissions associated with fossil fuel activities create financial risks from potential litigation, increased insurance costs, carbon pricing and stricter regulatory compliance expenses.	Short-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	RISK
	Climate change mitigation Investment in renewable energy projects and alternative fuels presents an opportunity for financial growth by attracting eco-conscious investors and benefiting from government incentives for cleaner energy transitions.	Short-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	Opportunity
Pollution	**Pollution of water** Water contamination risks from oil spills can lead to substantial financial liabilities due to remediation costs, regulatory fines, damage to local fisheries as well as, potential lawsuits from NGO's or other stakeholders.	Short-term	Regulatory/Legal, Operational, Reputational, Environmental	RISK
	Substances of concern or very high concern The use of hazardous substances in refinery operations may lead to financial risks from regulatory fines, health-related lawsuits and increased costs for environmental compliance and remediation.	Short-term	Regulatory/Legal, Reputational, Strategy, Environmental	RISK
Water and marine resources	**Water** High water usage for industrial processes poses financial risks from potential community backlash, regulatory restrictions and increased costs for securing alternative water sources during scarcity.	Mid-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	RISK
Biodiversity and ecosystems	**Direct impact drivers of biodiversity loss** Land degradation from industrial infrastructure can create financial risks due to potential environmental restoration costs, regulatory penalties and damage to corporate reputation among environmentally conscious consumers.	Mid-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	RISK
	Impacts on the state of species The risk to biodiversity from managing wind parks in protected areas may result in financial liabilities due to potential regulatory fines, mitigation costs and reputational damage among stakeholders.	Mid-term	Regulatory/Legal, Reputational, Strategy, Clients, Environmental	RISK
Resource use and circular economy	**Waste** The risk of hazardous waste contamination can result in significant financial liabilities due to cleanup costs, regulatory penalties and potential lawsuits from affected communities.	Short-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	RISK
	Waste Waste generation from solar and wind operations can create financial risks related to disposal costs, compliance with waste management regulations and potential penalties for improper waste handling.	Long-term	Regulatory/Legal, Operational, Reputational, Strategy, Environmental	RISK
Business conduct	**Corruption and bribery** The risk of corruption and bribery can lead to significant financial liabilities from legal penalties, loss of business contracts and damage to the Group's reputation, impacting overall profitability.	Short-term	Regulatory/Legal, Operational, Reputational, Strategy, Clients	RISK
	Management of relationships with suppliers including payment practices The lack of a supplier-related policy creates financial risks from potential regulatory fines, legal liabilities and reputational damage, which can result in loss of business and stakeholder trust.	Short-term	Regulatory/Legal, Reputational	RISK
	Protection of whistle-blowers The existence of a Whistleblowing Policy and relevant procedures strengthens corporate integrity, transparency and accountability. It promotes a culture of transparency by enabling employees to report unethical behavior or misconduct without fear of retaliation.	Mid-term	Regulatory/Legal, Reputational, Strategy, Workforce	Opportunity
Own workforce	**Working conditions** The high-risk nature of oil and gas operations can lead to substantial financial liabilities from accidents, regulatory penalties and increased insurance costs, affecting overall profitability and investment appeal.	Short-term	Regulatory/Legal, Operational, Reputational, Strategy, Clients, Environmental, Workforce	RISK
	Equal treatment and opportunities for all Failure to address equal opportunity issues can lead to financial risks through reduced employee morale, higher turnover costs and potential backlash from customers and investors prioritizing diversity and inclusion.	Long-term	Regulatory/Legal, Operational, Reputational, Strategy, Workforce	RISK
	Equal treatment and opportunities for all Failure to implement a robust training and development system may lead to personnel's demotivation and lead to resignations and negative impact to Group's financial performance.	Mid-term	Operational, Strategy, Workforce	RISK
	Working conditions The absence of a coherent policy against violence and harassment at work may lead to financial risk deriving from litigation and reputational damage.	Long-term	Regulatory/Legal, Reputational, Strategy, Workforce	RISK

Topic	Description	Time horizon	Affected risk pillars	Characterization
Own workforce	**Working conditions** A dedicated health and safety committee can mitigate financial risks by reducing workplace accidents, minimizing liability costs and ensuring compliance with safety regulations, ultimately protecting the Group's bottom line.		Regulatory/Legal, Operational, Workforce	
	Working conditions Supporting a worker rights association can lead to financial opportunities by improving employee satisfaction and retention, reducing turnover costs and fostering a more engaged workforce that drives productivity.		Operational, Workforce	
Affected communities	**Communities' civil and political rights** The essential role of energy companies in societal development creates opportunities for financial stability and growth through increased demand for energy services and long-term contracts.		Operational, Strategy	
	Communities' economic, social and cultural rights Operational disturbances can result in financial risks from community backlash, potential legal challenges and increased costs for mitigation measures or compensation to affected residents.		Regulatory/Legal, Reputational, Strategy, Environmental	RISK
Consumers and end-users	**Personal safety of consumers and/or end-users** Implementing rigorous quality checks can prevent financial losses from product recalls, litigation and reputational harm while enhancing consumer confidence and driving sales growth through improved product safety.		Regulatory/Legal, Reputational, Clients	

1.5 Impacts, Risks and Opportunities Management

1.5.1 Description of the process to Identify and Assess Material Impacts, Risks and Opportunities [IRO-1]

MOTOR OIL Group has conducted a Double Materiality Assessment (DMA) to identify, reassess and prioritize the critical areas of sustainability. This includes the impact materiality, which examines the Group's effects on society, governance and the environment and at the same time, financial materiality, meaning the identification of significant risks and opportunities that affect (or could reasonably be expected to affect) the financial position, financial performance, cash flows, access to funding, or the cost of capital in the short, medium, or long term.

Step 1: Creating the inventory of impacts, risks and opportunities

The first phase of MOTOR OIL Group's Double Materiality Assessment focused on a benchmarking analysis to build an understanding of the Group's material topics, both specific to its operations and the broader industry. This process involved a comparative analysis, where MOTOR OIL Group examined its operations alongside those of its industry peers, thus evaluating key sustainability themes relevant to the Group and the sector. Additionally, Group revisited material topics identified in previous assessments, ensuring these remained applicable to the current sustainability landscape, which has evolved with shifting environmental and social priorities.

Therefore, MOTOR OIL Group's approach was structured around three key activities: an analysis of specific sub-topics, a benchmarking study of peer practices and a review of existing material topics informed by the CSRD. This benchmarking also incorporated insights from impact materiality identified in prior reports, aiming to provide a consistent framework for sustainability evaluation. To strengthen alignment with the CSRD, MOTOR OIL Group's assessment included a review of the sector specific CSRD Standards, refining the focus areas to better address the unique impacts and sustainability considerations of the industry.

The assessment places particular focus on activities and business relationships that may present a heightened risk of adverse impacts. These include operations in high-impact sectors such as refining, energy infrastructure and petrochemicals, as well as regions where environmental stress or social risks may be elevated. Specific attention is also given to business activities involving hazardous materials, high energy intensity and land use, such as the development of wind parks or energy-from-waste facilities. Through this targeted approach, the Group is able to flag and monitor areas with disproportionate environmental or social exposure.

The process explicitly considers the impacts that originate both from MOTOR OIL's own operations and those that arise through its business relationships, including supply chain partners, customers and joint ventures. For example, emissions and occupational safety risks are directly linked to in-house operations, while product use-phase emissions or biodiversity impacts from infrastructure projects may result from partnerships or indirect involvement. This perspective ensures that the Group accounts for its full sphere of influence when prioritizing and addressing sustainability impacts.

Value Chain mapping

MOTOR OIL Group's impact identification, assessment and prioritization process is closely integrated with its sustainability due diligence framework. As part of its due diligence, the Group conducted a value chain analysis to determine where significant environmental, social and economic impacts are most likely to occur. This assessment covered upstream, own operations and downstream stages-focusing on key business activities such as sourcing, production, distribution and product end-use.

The process evaluated the severity and likelihood of impacts across each stage of the value chain, with emphasis placed on areas where the Group has greater operational control and influence. Notably, own operations and downstream activities were identified as the primary areas of material impact, particularly concerning environmental and safety issues. In contrast, certain upstream social risks - such as human rights or child labor - were considered less likely or severe due to the Group's indirect involvement in those areas. Nonetheless, these were still addressed through policies such as the Supplier Code of Conduct and other due diligence measures.

This approach, which aligns with ESRS, ensures that impact assessment is not only data-driven but also risk-informed and context-specific. By embedding it within the broader due diligence process, the Group has developed a more streamlined, accountable and resilient framework for identifying and managing sustainability-related risks and opportunities across its value chain.

Stakeholder mapping

MOTOR OIL Group developed a dynamic stakeholder map to understand the influence and impact of various stakeholders on its operations. Key groups were identified and categorized based on the ESRS requirements: Affected Stakeholders and Users of Sustainability Statements. The group employed diverse engagement methods, such as communication channels, workshops and feedback mechanisms, to facilitate ongoing dialogue with each group, across all group operations and subsidiaries. Each stakeholder group was assigned a priority level, enabling MOTOR OIL Group to allocate resources effectively for engagement; this mapping provided insights into stakeholders' concerns, expectations and potential areas of collaboration or conflict. Thus, the Group ensured that stakeholder perspectives were integrated into strategic decision-making, enhancing its overall sustainability and risk management approach, while also creating the necessary background for easier identification of impacts, risks and opportunities.

The key stakeholder groups identified include employees, business partners and suppliers, clients and consumers, shareholders, the investment and financial community, industry peers, media, NGOs and local communities, unions and universities and the scientific community.

An overview of the stakeholder categories is provided in the table below.

Affected stakeholders	Users of sustainability statements	Silent stakeholders
Employees	Industry peers	Nature
Business partners & suppliers	Media	Society
Clients & consumers	NGOs and Local communities	The economy
Shareholders	Unions	
Value chain workers	Universities & scientific community	
Investment & financial community		

DMA Entities Scoping

The Double Materiality Assessment (DMA) process incorporated a hybrid mode, combining a top-down approach with an assessment performed at the group level while engaging or consulting with subsidiaries in order, to receive the necessary information; and a bottom-up approach, with an assessment performed at the subsidiary level and consolidating the results at the group level. The companies' scope for consideration was parent company, subsidiaries, associates and joint operations. Investment entities were excluded from the process. Nevertheless, the investor companies to the relevant investees (i.e. IREON VENTURE, MOTOR OIL HELLAS SA, LPC, THALIS, VERD) have primarily participated in the DMA process.

Thresholding

MOTOR OIL Group employed a thresholding approach to prioritize sustainability impacts, risks and opportunities within its value chain. The methodology employed by MOTOR OIL Group is based on calculating an adjusted average to determine the threshold for top scores. This threshold is set by subtracting a fixed percentage from the overall average of all scores. This approach enables an evaluation of results that is independent of the variation in individual values (outliers), providing a more balanced and normalized prioritization of impacts, risks and opportunities. This methodology ensured that focus was placed on areas with the most significant influence on the Group's sustainability performance:

For positive impacts, a threshold was set at the average–based top 40% of scores, reflecting the Group's commitment to maximizing value creation and driving innovation. For opportunities a threshold was set at the average - based top 50% of scores, allowing high-potential areas where investments can generate the greatest economic, social and environmental benefits as well as Group value. Conversely, for negative impacts and risks, a more inclusive threshold of the average-based top 50% of scores was applied, to allow a wider array of potential challenges that could affect operations, stakeholder relationships and regulatory compliance through a larger portion of risks, which the Group will use to enhance resilience and reduce the likelihood of unforeseen disruptions.

Step 2: Stakeholder engagement in the DMA

Stakeholders play a crucial role in the Double Materiality Assessment (DMA) process. The main goal of stakeholder engagement in DMA is to incorporate their insights into corporate sustainability strategy and ESRS reporting. This is achieved by identifying and evaluating material sustainability topics through structured engagement sessions, including discussions and consultations. A key aspect of this approach involves the Stakeholder Representatives, employees who maintain close relationships with external stakeholders and facilitate the assessment process.

Stakeholders are classified into different groups based on their role and relevance:

Internal Stakeholders: Employees, shareholders and unions who shape internal decision-making and corporate culture.

Business and Market Partners: Business partners, suppliers, clients, consumers and industry peers who contribute to supply chain stability and market trends.

Financial and Investment Community: Investors, financial institutions and analysts who assess sustainability performance for investment decisions.

Regulatory and Societal Influencers: NGOs, local communities, media and policymakers who hold organizations accountable for their social and environmental impact.

Scientific and Academic Institutions: Universities and research bodies that provide insights into ESG (Environmental, Social and Governance) trends and regulations.

Environmental and Economic Systems: Nature, society and the broader economy, representing the indirect but critical stakeholders impacted by corporate sustainability actions.

Stakeholder Representatives play a crucial role in:

Conducting direct engagement with external stakeholders through structured dialogues, meetings and consultations.

Translating stakeholder concerns into actionable insights for sustainability reporting.

Ensuring a balanced representation of diverse stakeholder interests in the materiality assessment process.

Facilitating collaboration between different internal departments and external partners to enhance the Group's sustainability strategy.

To uphold integrity, the Group appointed a Third Party to collect insights, analyze stakeholder feedback and ensure a comprehensive and objective representation of stakeholder engagement in the double materiality scoring process.

Step 3: Validation of Impacts, Risks and Opportunities (IROs)

Before moving to the scoring phase, it was essential to validate the wording and categorization of all identified Impacts, Risks and Opportunities. This validation ensured consistency, accuracy and alignment across the Group. The process has involved cross-functional dialogue when necessary.

The role of the Sustainability Division in validation

The Sustainability Division was responsible for reviewing the terminology and framing of each IRO to ensure alignment with both the Group's sustainability strategy and external frameworks.

Ensured that each impact, risk and opportunity was described in a clear and concise manner, avoiding ambiguity.

Checked that the language used reflected the nature and scope of the IRO (e.g., whether an impact was global or local, immediate, or long-term), while considering impacts throughout the entire value chain-upstream (e.g., suppliers) and downstream (e.g., customers).

Confirmed that all IROs were categorized correctly (as either risk or opportunity).

Internal dialogue for refinement

In cases where the wording or categorization of IROs was unclear or required further refinement, the Sustainability Division initiated an internal dialogue with relevant departments (such as Operations, Risk Management, or Human Resources). These discussions were critical to ensuring that the impacts were accurately defined and that the IRO list reflected both operational realities and strategic priorities.

The output of this phase was a validated and refined list of IROs, which was used in the subsequent scoring process. This step ensured that the foundation for the scoring phase was built on a common understanding of impacts, risks and opportunities across the organization.

Step 4: Scoring Impacts, Risks and Opportunities (IROs)

The scoring of impacts, risks and opportunities was conducted in alignment with the scoring system outlined in the Corporate Sustainability Reporting Directive (CSRD) and the principles set out in ESRS 1 and ESRS 2. Once the IROs had been identified, documented and validated, the next step involved assigning scores based on their materiality. This process allowed the Group to differentiate between impact materiality (how sustainability issues affected stakeholders and the environment) and financial materiality (how sustainability issues affected the Group's value). The process integrated a double materiality perspective, ensuring a comprehensive approach to assessing sustainability matters.

Roles & Responsibilities [1]

The governance structure for identifying and scoring impacts, risks and opportunities (IROs) within the MOTOR OIL Group is designed to ensure clarity, accountability and alignment across the entire organization. The process is segmented based on the nature and scope of the IROs, ensuring that relevant subsidiaries and data owners contribute their expertise. Additionally, the evaluation process incorporates identified key stakeholder scores per impact, which are weighted and factored into the overall score. This approach promotes a comprehensive and coordinated effort while allowing for specialization and detailed knowledge input where needed.

(1) Applying both to IROs identification and scoring

For the purposes of the methodology the following roles and responsibilities shall apply:

Sustainability Committee: Consisted of Board members. Responsible for the overall approval of the DMA process and the scoring results.

Sustainability Division: Is responsible for the initial scoring of the Impacts and Risks/Opportunities after having validated the IROs in step 2. It also has the general overview of the end-to-end process.

ESG Controller: Is integral part of the Sustainability division and mainly responsible for the overview of the DMA process and the regulatory compliance under CSRD.

Internal Experts: Internal expert divided into the following categories:

- **Data Owners:** Are individuals that are subject matter experts selected based on their expertise in specific thematic areas and their comprehensive understanding of the companies' operations.
- **Risk Owners:** Are individuals that have been assigned by the Risk Management Unit with the responsibility for identifying and assessing risks.
- **Opportunity owners:** Are individuals that have been assigned by the Group Strategy Directorate with the responsibility for assessing the anticipated financial effect of opportunities.

Stakeholders are those who can affect or be affected by the undertaking. There are two main groups of stakeholders: Affected stakeholders and key users of the sustainability statement. They participate in the process of scoring.

Third Party: Refers to external entities or organizations that assist in the process of gathering information, conducting interviews and engaging with stakeholders

Upon completion of the initial scoring by the Sustainability division, the process involved internal experts from the MOTOR OIL Group and relevant subsidiaries. If the impact was limited to a single subsidiary, the scoring responsibility rested with representatives from that specific subsidiary. The allocation of responsibility varied based on the specific sub-topic and theme of the impact, ensuring that subject matter experts with the most relevant knowledge were involved in evaluating the materiality.

In the case of financial materiality, the assessment of risks and opportunities was carried out by the respective representatives, who worked closely with two key departments:

The Risk Management Unit, which provided guidance and oversight in evaluating and scoring potential risks, ensuring a robust and systematic approach to risk identification, likelihood and financial effect assessment.

The Group Strategy General Directorate (and the relevant Business owners), which was responsible for supporting and overseeing the evaluation of opportunities, ensuring that financial projections, cost-benefit analyses and potential value creation were accurately scored.

Impact materiality scoring details

The impact materiality assessment focused on how sustainability matters affected external stakeholders, including communities, employees, customers and the environment. Scoring these impacts involved a thorough evaluation of three key parameters: Scale, Scope, Irreversibility and Likelihood (for potential impacts). Additionally, impacts were assessed based on their time horizon (short-term, mid-term, or long-term). These assessments were informed by insights from internal stakeholder engagement and ensured that external stakeholder concerns were reflected accurately.

Financial materiality scoring details

Financial materiality scoring focused on how sustainability-related impacts, risks and opportunities affected the Group's financial performance and value creation. Through this scoring process, the Group evaluated the likelihood of financial outcomes and considered various time horizons to determine when financial benefits or losses might materialize.

In evaluating financial materiality, key parameters were considered: Magnitude, with its underlying pillars and Likelihood of occurrence. These factors provided a comprehensive view of how sustainability matters could impact the Group's financial health.

As part of its assessment, the Group also identified how its material risks and opportunities are connected to key dependencies on natural and human capital. These dependencies were explicitly considered in evaluating the significance of each issue across the value chain.

Magnitude: The Magnitude of financial impact refers to the scale or extent of the potential financial implications that a sustainability-related activity or decision could have on the Group's overall financial health. This includes evaluating both direct and indirect financial consequences of sustainability matters, which vary widely depending on the Group's operations and market conditions.

Regulatory/Legal effect: The financial implications of regulatory compliance are vast, involving penalties, legal challenges and resource allocation. Proactive alignment enhances reputation and mitigates risks. However, non-compliance triggers audits, legal expenses and financial strain. There's potential for management prosecution, substantial lawsuits and unchanged regulatory sanctions, emphasizing the importance of strategic adherence to regulatory goals for long-term financial health and operational stability.

Operational effect: Operational efficiency, increased productivity and robust business continuity are integral to financial health. Streamlining processes cut costs, while heightened productivity optimizes resource use, impacting the bottom line. Employee loyalty and morale foster a positive work environment, curbing turnover costs and attracting talent. Effective continuity measures mitigate financial risks from disruptions, ensuring consistent operations.

Reputational effect: A strong reputation yields financial benefits through an attractive brand, fostering positive public perception. It opens doors to media and PR opportunities, enhancing visibility and market presence. Stakeholder trust, a cornerstone of financial success, is bolstered, attracting investment and partnerships. Employee advocacy, stemming from a positive reputation, cultivates a motivated workforce, driving productivity.

Strategy effect: Business/Strategic risk is a type of risk that is associated with the organization's strategic objectives and goals. It includes risks related to market competition and technological advancements. Analyzing strategic risk is important because it helps organizations identify potential threats to their business model and develop strategies to mitigate those risks.

Score types	Significance	Time Horizon	Stakeholder groups affected	Geographies affected	Irreversibility	Likelihood
Substantial	Major and widespread adverse or beneficial impact on the environment, society, or economy. Requires immediate action to mitigate or enhance the impact.	-	Wide range of stakeholder groups affected, including key communities, customers, employees and investors. Requires broad, inclusive engagement and response.	Impact spans multiple countries or regions, with significant global or widespread regional effects. Immediate cross-regional coordination may be necessary.	Impact is irreversible, causing permanent changes to the environment, society, or economy. Requires immediate intervention to prevent or minimize lasting effects.	Very high likelihood of occurrence; almost certain to happen. Proactive measures essential to manage expected impact. **100% chance**
High	Significant impact on the external environment, with considerable effects on local or regional ecosystems, communities, or economies. Action needed to manage risks or capitalize on benefits.	Long-term or permanent impact, with effects lasting many years or Potential irreversible. Requires urgent and long-term action. **>5 years from reporting year**	Multiple important stakeholder groups affected with notable impact. Significant communication and management efforts needed.	Major impact on several regions or key national areas, affecting broader geographical areas with notable consequences. Regional action and coordination required.	Impact is difficult to reverse, with longa-term consequences that may require extensive efforts to mitigate or partially restore.	High likelihood of occurrence; probable under normal circumstances. Requires active management and mitigation. **75% chance**
Moderate	Noticeable impact on the external environment, with some effect on the community, economy, or environment. Can be managed with appropriate measures over time.	Medium to long-term impact, lasting several years, with significant and enduring consequences for the environment, people, or economy. **1-5 years from reporting year**	Limited stakeholder groups affected, with manageable effects. Focused engagement with specific groups may be required.	Noticeable impact on specific localities or a few regions. Effects are manageable and primarily localized, requiring regional attention.	Impact is partially reversible, with moderate efforts required for recovery or mitigation over time.	Moderate likelihood; may occur occasionally. Regular monitoring and preparedness are recommended. **50% chance**
Low	Minimal impact on the environment, people, or economy. Limited or negligible effects, requiring minimal attention or monitoring.	Short to medium-term impact, lasting months to a year, with manageable or reversible effects. **<1 year from reporting year**	Minimal or localized impact, affecting only a few stakeholders with little significance. Limited engagement required.	Minimal, localized impact, affecting only small or contained geographic areas. Limited response required.	Impact is easily reversible, with minimal effort needed to restore conditions to their previous state.	Low likelihood; unlikely to occur but possible. Minimal preparation or monitoring is needed. **25% chance**
Very Low	Very low relevant impact on the external environment or the criterion is not applicable to the context.	-	Very low stakeholder groups affected, or the criterion is not applicable to the context.	Very low geographic areas affected, or the criterion is not applicable to the context.	Very low irreversibility in impact, or the criterion is not applicable to the context.	Very low likelihood of occurrence, or the criterion is not applicable to the context. **0% chance**

Step 5: Validation from management

To ensure the robustness and strategic alignment of the identified impacts, risks and opportunities, a critical validation step was incorporated into the process, involving a review by the Sustainability Committee. This step served to verify that the assessments and scoring mechanisms were consistent with the organization's broader strategic objectives. By engaging leadership, the organization was able ensure that the findings were not only accurate but also aligned with the long-term goals, allowing for a more informed decision-making process that supports strategic priorities.

Integration of Double Materiality Assessment into the ERM

The Sustainability Division, in collaboration with an external consultant, successfully integrated the financial materiality process into the broader double materiality assessment framework. This was pivotal in enhancing the Group's understanding of how sustainability-related issues could have financial repercussions. In the past, the department had gathered a comprehensive collection of data on various sustainability impacts, but this effort was expanded by including both financial losses and benefits, which are categorized as risks or opportunities. By doing so, the Climate Change & Sustainability Unit aimed to ensure that the financial implications of these impacts were fully considered in the decision-making process.

The integration of financial materiality was not an isolated task but involved a coordinated effort with the Risk Management Unit of the Group. Their active involvement ensured that sustainability risks and opportunities were not only captured but were also aligned with the Group's overall risk management strategy. A key tool in this process was the Risk Register, which outlines the sustainability-related risks the organization faces, allowing for a more structured approach in identifying and managing these issues.

The comprehensive assessment process included both qualitative and quantitative evaluations to understand the actual or potential financial implications, whether losses or gains - that the Group might face due to its actions or impacts on the environment, society, or the economy. This dual approach provided a balanced view of risks, factoring in not just hard numbers but also the broader context and potential long-term outcomes that might not be immediately quantifiable.

To ensure each risk or opportunity was properly assessed, the Sustainability Division assigned a range of potential loss or benefit to each identified risk pillar. These pillars represented various areas of sustainability impact, such as environmental degradation, social responsibility, or economic disruption. By assigning a range of potential outcomes to each of these pillars, the Group could better gauge the significance of each risk or opportunity and prioritize its responses accordingly. This enhanced visibility into the financial ramifications of sustainability issues enabled more informed decision-making, thereby fostering a more resilient and sustainable business strategy in the face of evolving environmental and social challenges.

The involvement of supervisory, management and administrative in the assessment of IROs

MOTOR OIL Group ensures strong governance oversight of its impact, risk and opportunity (IRO) assessment process through the structured involvement of its administrative, management and supervisory bodies.

The Sustainability Committee which is responsible for overseeing ESG matters, plays a central role in guiding the double materiality assessment process. It reviews and validates the methodology, ensures alignment with corporate strategy and monitors how material IROs are addressed across the business. The Committee is informed of sustainability-related risks and opportunities on a regular basis and evaluates the strategic implications of the findings.

At the supervisory level, the Board of Directors holds ultimate accountability for sustainability-related decision-making. It is responsible for approving the overall business strategy, which integrates the findings of the double materiality assessment, including climate and broader ESG risks and opportunities. The BoD ensures that material IROs are considered in setting long-term objectives, in capital allocation and in major project and transaction approvals.

Additionally, the Audit Committee oversees the integrity and completeness of sustainability-related disclosures, ensuring the reliability of the assessment process and the quality of information reported in accordance with CSRD and ESRS. Finally, the Sustainability Division and the Chief Sustainability Officer coordinate the assessment on an operational level, engaging with relevant business units and subject matter experts to identify, evaluate and monitor impacts across the value chain. They ensure that the process is methodologically sound, data-driven and aligned with both regulatory requirements and internal decision-making needs.

1.5.2 Climate Change - Identification of Impacts, Risks and Opportunities [E1.IRO-1]

Climate Impacts

While MOTOR OIL Group is committed to sustainable practices, it acknowledges that the nature of its operations - particularly in Refining, Power & Gas and Fuels & Marketing - contributes to greenhouse gas (GHG) emissions. The refining, distribution and use of petroleum products can affect air quality and lead to broader environmental degradation. These impacts extend to various stakeholders, including nature and ecosystems, business partners, shareholders, investors, NGOs and local communities.

In addition, the Group's energy-intensive processes place considerable pressure on natural resources. Recognizing these challenges, MOTOR OIL Group continues to invest in decarbonization, energy efficiency and technological innovation, while maintaining transparent communication with stakeholders regarding environmental limitations and ongoing mitigation efforts.

Physical Climate Risks

MOTOR OIL Group identifies physical climate risks as a significant area of concern for its infrastructure and operations, categorizing them into acute and chronic risks. Acute risks arise from extreme weather events - such as hurricanes, floods, wildfires and heatwaves - which can cause direct physical damage, disrupt supply chains and lead to operational and financial losses. Chronic risks, on the other hand, emerge gradually due to long-term climate trends like rising temperatures, sea-level rise and prolonged droughts. These conditions can negatively impact refinery efficiency, increase energy and cooling demands, disrupt logistics and contribute to equipment corrosion, especially in coastal facilities.

Under a high-emissions scenario (RCP8.5), the Group's infrastructure is expected to experience up to 15% more downtime in high-risk locations, 8–12% productivity losses during extreme heat events and as much as 20% reduction in cooling water availability. In response, the Group has introduced adaptation measures such as closed-loop water systems and alternative sourcing strategies to maintain resilience.

In its Renewable Energy (RES) operations, physical risks vary by technology and geographical context. Solar panels and wind turbines are vulnerable to extreme weather, while temperature fluctuations can affect their performance. Water scarcity poses operational challenges for hydroelectric and cooling systems and coastal erosion and rising seas threaten offshore installations. Additionally, geophysical hazards like earthquakes and landslides can impact geothermal and hydro assets and variability in natural resources - such as inconsistent wind or solar radiation - can affect energy production and grid stability.

To mitigate these diverse risks, MOTOR OIL Group incorporates resilient infrastructure design, strategic site selection and land-use planning. The Group also utilizes climate scenario analysis to inform its strategic and project-level decision-making, ensuring that climate resilience is embedded throughout its renewable and conventional energy operations.

Transition Climate Risks

The global shift toward a low-carbon economy presents a broad spectrum of transition risks that have the potential to significantly impact MOTOR OIL Group's core business activities. Key challenges include regulatory developments, such as stricter emissions limits and the introduction of carbon pricing mechanisms under frameworks like the EU Green Deal and Fit for 55. In parallel, technological advancements are accelerating the competitiveness of alternative energy solutions, potentially rendering some existing fossil-based assets less viable.

At the same time, growing pressure from investors and financial institutions to prioritize sustainable portfolios, along with evolving consumer preferences and increasing societal expectations for corporate climate responsibility, are reshaping market dynamics.

Among the most critical risks is the anticipated decline in oil demand, driven by electrification and improved energy efficiency. This shift may result in lower sales volumes, reduced profit margins and underutilization of refining infrastructure. It also increases the burden of regulatory compliance and exposes the Group to reputational risks, particularly as stakeholders - including NGOs, regulators and local communities - intensify scrutiny of traditional oil and gas operations.

Climate related Opportunities

MOTOR OIL Group is proactively leveraging the energy transition by directing investments toward biofuels, green hydrogen, renewable energy infrastructure and circular economy platforms, alongside carbon capture and energy efficiency technologies. These strategic shifts are integral to the Group's transformation toward a low-carbon business model, reinforcing its commitment to achieving net-zero emissions by 2050. This realignment not only strengthens the Group's operational resilience but also ensures it remains aligned with evolving regulatory frameworks and growing stakeholder expectations around sustainability and climate performance.

With regards to the consultation with affected communities please refer to the Chapter Processes for engaging with affected communities about impacts [S3-2]. Furthermore, within the process of Double Materiality assessment (Identification of material impacts, risks and opportunities [IRO-1]), the Group has incorporated the view of local communities through the Stakeholder Representatives who are employees who maintain close relationships with external stakeholders and facilitate the assessment process. This chapter should be read in conjunction with chapter Climate Change [E1].

Finally, MOTOR OIL Group identifies and assesses climate-related risks and opportunities across short-, medium- and long-term time horizons, as part of its integrated risk management and strategic planning processes.

In the short term, key risks are primarily regulatory and technological, reflecting evolving climate legislation and the need to adapt to rapid innovation in low-carbon solutions.

In the medium term, the Group anticipates increased exposure to regulatory, technological, market and reputational risks, driven by tightening policies, shifting investor expectations and growing consumer demand for sustainable products.

Over the long term, risks broaden further to include acute and chronic physical risks, alongside sustained regulatory, market and reputational pressures. These include the potential impacts of extreme weather events, long-term climate shifts and systemic changes in global energy demand and supply.

Financial Compatibility with Climate Scenarios

The Group evaluates the financial resilience of its strategy and operations under different climate scenarios, to ensure compatibility with future regulatory, market and physical risk developments as described with chapter Climate Change [E1].

1.5.3 Pollution - Identification of Impacts, Risks and Opportunities [E2.IRO-1]

The environmental impact of Group's operational sites has been identified, with the key entities within this sector, such as MOTOR OIL (the refinery), LPC, THERMOILEKTRIKI and VERD as well as storage and distribution facilities contribute to various forms of pollution, including air, soil and water contamination.

Due to the nature of the Group's activities, which are mainly industrial and related to oil and gas production and distribution, the pollutants emissions are unavoidable aspects. Processing and storage of fossil fuels generates substantial amounts of air pollutants beyond greenhouse gas emissions. Furthermore, industrial activities can contribute to water and soil pollution, compromising the quality of natural resources, disrupting aquatic ecosystems and posing potential health risks to local communities.

Beyond environmental implications, pollution can present financial and regulatory risks. The release of pollutants by the operational activities or accidentally can result in regulatory penalties, compliance costs and potential liabilities for environmental damage. Furthermore, the industry faces reputational risks and the potential for legal actions from NGOs and other stakeholders advocating for stricter pollution controls. Emissions of pollutants can lead to regulatory fines, health-related legal claims and increased operational costs associated with environmental compliance and remediation efforts. These risks are short-term but require proactive management to ensure regulatory adherence and mitigate potential financial consequences.

The Group's process for screening operations, business activities and assets are made through the Environmental Management System (EMS). The EMS is certified to ISO 14001 standard to the operational sites, ensuring systematic identification and control of environmental impacts.

The EMS supports the Group's sustainability objectives by:

Identifying and assessing environmental impacts throughout the production process,

Ensuring compliance with environmental regulations and best practices and

Recording and controlling environmental performance metrics.

The EMS also aligns with European and National legislation, principally with:

Directive 2010/75/EU (IED), focusing on integrated air, water and soil pollution prevention.

Directive 2015/2193/EU on the limitation of emissions of certain pollutants into the air from medium combustion plants.

Regulations on Best Available Techniques implementation

Directive 2011/92/EU on the assessment of the effects of certain public and private projects on the environment during construction and operation

The pollution related topics that were included in the materiality assessment can be found below:

Air Pollution: The processing of fossil fuels emits significant levels of pollutants - excluding greenhouse gases - such as sulfur oxides (SOx), nitrogen oxides (NOx), volatile organic compounds (VOCs) and particulate matter (PM). These emissions contribute to atmospheric degradation, smog formation, acid rain and adverse health effects on surrounding communities.

Wastewater and Surface Water Pollution: The discharge of process water and cooling water, if not properly treated, can introduce pollutants into surface water bodies, affecting aquatic biodiversity and water quality.

In the Circular Economy and Alternative Fuels sector, the impacts include the following issues:

Clogged Sewers: When used cooking oils are poured down drains, they can solidify and cause blockages

in the sewer systems. This can lead to costly repairs and maintenance, as well as potential overflow of sewage, which poses health risks to communities.

Water Contamination: Improper disposal of cooking oils can lead to contamination of water bodies. Oils can create a film on the surface of water, reducing oxygen levels and harming aquatic life. This contamination can also affect drinking water sources, posing risks to human health.

Air Pollution: When cooking oils are not disposed of properly and are instead burned or incinerated, they can release harmful pollutants into the air. These pollutants contribute to air quality degradation and can have adverse effects on respiratory health.

Pollution-related risks are assessed from both operational and financial perspectives. Similarly, the risks associated with pollution and included in the materiality assessment are the following:

Water Contamination from Oil Spills: Accidental spills or leaks into water bodies may result in extensive environmental damage and significant financial liabilities. These include remediation costs, potential penalties from regulatory authorities, operational disruptions and reputational harm. Legal actions by affected communities, NGOs, or environmental bodies may also arise.

Regulatory and Legal Risk: The handling of hazardous substances and the generation of waste streams expose the Group to regulatory risks. Stricter environmental regulations or non-compliance may lead to fines, operational restrictions, or permit withdrawals. There is also exposure to litigation related to health impacts and environmental degradation.

Operational and Compliance Costs: Meeting increasingly stringent pollution control standards necessitates ongoing investment in advanced treatment technologies, emissions monitoring systems and staff training. These result in elevated capital and operational expenditures.

With regards to the consultation with affected communities please refer to the Chapter Processes for engaging with affected communities about impacts [S3-2].

1.5.4 Water and Marine Resources - Identification of Impacts, Risks and Opportunities [E3.IRO-1]

Recognizing the importance of water as a shared and finite resource, MOTOR OIL Group prioritizes efficient water usage and wastewater management across its industrial activities. The Group monitors water consumption, reuses water where feasible and ensures that effluent discharges meet environmental standards, thereby protecting natural water systems. Investments in closed-loop systems and water treatment technologies support the goal of reducing the water footprint while maintaining operational excellence. The water-related topics that were included in the materiality assessment are analyzed below and include water usage and desalination, among others.

To reduce its water consumption, MOTOR OIL Group consistently implements measures to efficiently manage water use, especially at the refinery. To this extent, the refinery operates a desalinization unit which allows it to cover 100% of its water needs by sea water. This initiative is crucial in conserving freshwater resources and reducing the strain on local water supplies.

Furthermore, the refinery processes acidic water generated in different phases of the production process, recycling a large portion of the flow where possible. This recycling effort is essential in minimizing waste and reducing the environmental impact of industrial operations. By treating and reusing acidic water, the refinery significantly lowers the volume of wastewater released into the environment, thereby protecting aquatic ecosystems and maintaining water quality.

As a result of these measures, impacts to water and the natural environment are eliminated to the lowest degree possible. Specifically, the following benefits are achieved:

Conservation of Freshwater Resources: By relying entirely on desalinated sea water, the refinery avoids the use of freshwater sources, which are often limited and vital for local communities and ecosystems. This helps in preserving freshwater for essential uses such as drinking water and agriculture.

Protection of Marine Ecosystems: The desalination process ensures that the water used in the refinery does not negatively affect marine life. Proper management and treatment of sea water prevent contamination and disruption of marine habitats.

Reduction of Wastewater Pollution: Recycling acidic water within the refinery reduces the amount of polluted water discharged into the environment. This helps in maintaining the health of nearby water bodies and prevents harmful substances from entering the natural water cycle.

As a result of Group's efforts to eliminate the impact of its operations on the area's natural ecosystems, 100% of the water used in various parts of the refinery originates from processed sea water at its desalination units. This comprehensive approach to water management demonstrates MOTOR OIL Group's commitment to sustainability and environmental stewardship.

Through these initiatives, MOTOR OIL Group not only ensures efficient water use but also actively contributes to the protection and preservation of marine resources. Group's dedication to sustainable practices reflects its responsibility towards the environment and its goal of fostering a healthier and more sustainable future for all.

MOTOR OIL's approach to water management is grounded in operational excellence and environmental compliance. The refinery, which accounts for more than 86% of total water withdrawals, relies solely on seawater through desalination, significantly limiting the use of freshwater sources. All industrial sites are equipped with Wastewater Treatment Plants (WWTPs) and no untreated discharges are released into freshwater or groundwater. Daily monitoring ensures water quality, with tertiary treatment applied at key facilities such as MOTOR OIL refinery. Water-related activities are governed under ISO 14001-certified Environmental Management Systems.

Water is also treated as a climate-adjacent risk and relevant planning is integrated into the Group's broader climate adaptation and emergency preparedness strategy. For example, sites located in flood-prone areas (as defined under the EU Floods Directive) have contingency plans in place. Marine risks are addressed through a Facility Contingency Plan aligned with international marine protection standards, covering pollution prevention and spill response. Biodiversity and water risk management are closely interconnected, particularly in coastal and port operations, where wastewater handling and spill mitigation protocols are specifically designed to protect marine ecosystems.

Water is a critical resource across several of MOTOR OIL Group's core business activities, with each segment facing distinct water-related risks due to the nature of its operations.

This high dependency on water resources presents several material risks. Potential regulatory restrictions on water withdrawals or discharge quality may require costly operational adjustments or investments in advanced treatment technologies. Additionally, any failure in desalination infrastructure or deterioration in seawater quality due to pollution or climate-related impacts could disrupt operations.

While the direct water footprint in retail operations is relatively low, environmental risks remain. These include the potential for localized water pollution (e.g., spills or runoff at fuel stations), non-compliance with wastewater handling regulations and reputational risks if environmental safeguards are not properly enforced. Increasing consumer expectations for eco-efficient services - such as water-saving car wash systems - highlight the importance of continuous environmental performance across the retail network.

Power generation and gas infrastructure operations also involve water use, particularly in cooling and process applications. In this segment, risks are linked to physical water scarcity, regulatory compliance for discharge quality and potential temperature-based effluent restrictions under environmental permits.

Climate variability may increase the volatility of water availability or quality, requiring investment in resilient technologies such as closed-loop systems or air-cooling alternatives. In natural gas operations, occasional use of water in equipment cleaning and pressure systems requires proper wastewater disposal and monitoring.

Additionally, the Group operates in the environmental services sector, where water plays a central role in waste treatment processes. Risks in this segment relate to the quality of treated effluents, compliance with stringent discharge standards and the management of stormwater runoff from storage or landfill sites. Failures in water quality management could result in fines, reputational damage.

Finally, as the Group expands into biofuels and low-carbon alternatives (e.g., biodiesel, e-methanol, Blue Med initiatives), new water-related risks emerge. These include the water intensity of certain feedstocks, risks of unsustainable agricultural practices and discharge compliance from chemical processing.

The Group is also aware of potential community concerns around large-scale water use, particularly in regions facing seasonal scarcity.

With regards to the consultation with affected communities please refer to the Chapter Processes for engaging with affected communities about impacts [S3-2].

Furthermore, within the process of Double Materiality assessment (Identification of material impacts, risks and opportunities [IRO-1]), the Group has incorporated the view of local communities through the Stakeholder Representatives who are employees who maintain close relationships with external stakeholders and facilitate the assessment process.

1.5.5 Biodiversity and Ecosystems - Identification of Impacts, Risks and Opportunities [E4.IRO-1]

MOTOR OIL Group identified its material impacts, risks and opportunities related to biodiversity and ecosystem matters through the double materiality process. In the double materiality process, the Group evaluated both the impact of its operations on stakeholders and the broader environment, as well as the risks and opportunities emerging from external trends, including regulatory, market and societal developments. To support this, the Group employs a robust set of criteria for materiality assessment, encompassing factors such as geographic location, operational activities and industry-specific dynamics. The geographical context of operations, the nature of refinery activities and sector-specific challenges are critical elements in identifying material risks and opportunities. The topics that were included in the materiality assessment were related to Land-use change, Species population size and Land degradation. It should be noticed that the Group has not taken into consideration transition and physical risks, or systemic risks related to biodiversity and ecosystems.

Biodiversity preservation is embedded into environmental risk assessments, especially in areas adjacent to sensitive ecosystems. The Group undertakes proactive measures to mitigate habitat disruption and supports initiatives that promote ecosystem restoration and environmental stewardship.

MOTOR OIL Group integrates its refinery and commercial facilities into the marine environment with careful planning to prevent and respond to pollution incidents. No parts of the refinery about natural habitats or protected areas, minimizing direct harm to sensitive ecosystems.

CORAL & AVIN conduct regular spill response drills involving local authorities and certified contractors, equipped with emergency vans to address spills promptly. AVIN OIL identifies and manages environmental risks, such as degradation at its Agioi Theodoroi loading station, following strict operational rules and preventive plans.

All projects undertaken by MORE in 2023 were licensed according to Greek legislation, ensuring environmental approval for new constructions and addressing biodiversity impacts through assessments.

OFC conducts precise monitoring of groundwater, effluent, surface water, vapor and soil to detect and address environmental issues. MOTOR OIL Group's commitment to biodiversity includes strategic facility placement, detailed emergency plans, risk identification and management, compliance with legislation and comprehensive environmental monitoring. These initiatives protect biodiversity and promote sustainable practices, reflecting the group's dedication to a healthier and more sustainable future.

With regards to the consultation with affected communities please refer to the Chapter Processes for engaging with affected communities about impacts [S3-2]. Furthermore, within the process of Double Materiality assessment (Identification of material impacts, risks and opportunities [IRO-1]), the Group has incorporated the view of local communities through the Stakeholder Representatives who are employees who maintain close relationships with external stakeholders and facilitate the assessment process.

1.5.6 Resource Use and Circular Economy - Identification of Impacts, Risks and Opportunities [E5.IRO-1]

The Group actively promotes waste minimization, reuse and recycling across its operations by adopting circular economy principles. MOTOR OIL Group reduces waste generation through process optimization, responsible consumption and sustainable packaging initiatives. Non-recyclable and hazardous waste are managed in compliance with environmental regulations, ensuring safe disposal and minimal environmental impact. The Group also explores innovative methods to extend product life cycles and improve resource efficiency throughout the value chain.

Aiming to minimize its environmental impacts, MOTOR OIL Group has developed and implemented an Environmental Policy and Management System while also employing Best Available Techniques. Specifically, for the refinery, there is an extensive approach towards waste management detailed in the relevant procedure, which forms part of the Environmental Management System. The purpose of this procedure is:

Recording of Solid Waste: Comprehensive documentation of all solid waste produced during the operation of the refinery.

Classification of Solid Waste: Categorizing solid waste according to its physico-chemical composition and hazardous properties.

Management Presentation: Outlining the overall management of waste in accordance with applicable environmental terms governing the operation of the refinery and current legislation.

Inadequate waste management across MOTOR OIL Group's refinery, fuel storage and production operations pose a significant environmental and operational risk. Failure to effectively contain and treat hazardous and non-hazardous waste can lead to soil and groundwater contamination, resulting in biodiversity loss, water scarcity and long-term environmental degradation. These impacts may trigger costly remediation efforts, regulatory penalties and reputational damage.

RES activities, while essential for clean energy production, contribute to waste generation through the gradual deterioration of infrastructure. Solar panels, wind turbine blades and other renewable energy components have a limited lifespan, requiring systematic decommissioning and disposal strategies. Additionally, the widespread adoption of energy storage solutions introduces new challenges, particularly concerning the handling of end-of-life batteries. Without effective waste management frameworks, the accumulation of decommissioned renewable energy equipment could undermine the sustainability benefits of clean energy technologies.

Despite these challenges, waste repurpose offers an opportunity to the Group to transform industrial by-products and discarded materials into valuable resources.

Within the MOTOR OIL Group, companies specializing in circular economy play a key role in reducing landfill dependency and enhancing operational sustainability. By recovering and reusing materials, MOTOR OIL's subsidiaries such as VERD, PRASINO LADI, LPC, THALIS can create a closed-loop system that minimizes waste while improving economic efficiency. This approach aligns with global sustainability trends, supporting to meet compliance with evolving environmental regulations and stakeholder expectations.

Waste management companies further contribute to sustainability by implementing advanced recycling programs, promoting responsible waste management practices and reducing landfill disposal. By collaborating with industries, policymakers and technology providers, these companies help develop solutions that balance operational efficiency with environmental responsibility. As industries transition toward more sustainable business models, integrating waste upcycling into business strategies will be essential in mitigating environmental risks and reinforcing corporate sustainability commitments.

Risks

The risk of hazardous waste contamination presents immediate and substantial financial liabilities for companies involved in operations that generate hazardous materials - such as MOTOR OIL Group's refining, fuel storage and distribution activities. Cleanup costs can escalate quickly due to the complexity and scale of remediation efforts required, making them one of the most significant financial concerns in the sector. Additionally, the refining industry operates under strict and evolving environmental regulations, where non-compliance may lead to severe regulatory penalties. Inadequate waste management not only risks regulatory breaches but also exposes the Group to potential litigation from affected communities, amplifying financial and reputational risks.

In the renewable energy sector where MORE operates, the growing waste from decommissioned solar panels, wind turbine blades and energy storage systems present rising financial risks. Disposal costs are significant and compounded by evolving waste regulations. These components often contain hazardous materials and improper handling can lead to soil and water contamination, resulting in fines, legal action and costly remediation.

Opportunities

The accelerating shift toward circular economy practices and stricter environmental regulations has created a significant strategic opportunity for MOTOR OIL Group to diversify and future-proof its operations. As industries and governments intensify efforts to reduce waste, recover resources and lower emissions, the demand for sustainable waste management solutions has surged - particularly in sectors such as energy, mobility and manufacturing. Recognizing this momentum, MOTOR OIL Group has positioned itself as a key player in this transition by developing one of the most integrated circular economy platforms in Greece.

With regards to the consultation with affected communities please refer to the Chapter Processes for engaging with affected communities about impacts [S3-2]. Furthermore, within the process of Double Materiality assessment (Identification of material impacts, risks and opportunities [IRO-1]), the Group has incorporated the view of local communities through the Stakeholder Representatives who are employees who maintain close relationships with external stakeholders and facilitate the assessment process.

1.5.7 Business Conduct - Identification of Impacts, Risks and Opportunities [G1.IRO-1]

The Group identified its material impacts, risks and opportunities related to business conduct matters through a robust double materiality process. This approach ensured that the Group not only evaluated the financial implications of its activities but also considered the environmental, social and governance (ESG) factors that may influence its long-term value creation.

In the double materiality process, the Group considered both the impact of its operations on stakeholders and the broader environment, as well as the risks and opportunities arising from external trends, including regulatory, market and societal shifts. To achieve this, the Group uses a comprehensive set of criteria when assessing materiality, including location, activity, sector and the structure of its transactions.

The geographical context of operations, the nature of refinery activities, sector-specific challenges and the structure of transactions all play pivotal roles in identifying material risks and opportunities. The Group evaluates the environmental and social conditions of the areas in which it operates, taking into account local regulations, community impacts and risks related to climate change or other regional factors. The refinery's operations are assessed for their potential effects on business conduct, including production processes, energy consumption, waste management and social or ethical implications such as worker safety and environmental degradation. Sector-specific risks, such as compliance with environmental standards, supply chain transparency and resource management, are also considered. Furthermore, the structure of transactions like mergers, acquisitions, or partnerships is carefully examined to identify any risks or opportunities that could impact governance, ethical practices and the integration of sustainability criteria into corporate strategies.

Throughout the double materiality process, the Group actively engages with as many as possible affected stakeholders to ensure that their perspectives are considered in the decision-making process. This multi-stakeholder approach ensures that material impacts, risks and opportunities are comprehensively identified, allowing the Group to make informed, responsible decisions that align with both its business objectives and broader sustainability goals.

1.5.8 Disclosure requirements in ESRS covered by the undertakings' Sustainability Statement [IRO-2]

Disclosure Requirements List

ESRS 2 General Requirements	Description	Section	Additional information
BP-1	General basis for preparation of the sustainability statement	About this report [BP-1]	[BP-1 5 a] [BP-1 5 b(i)] [BP-15 b(ii)] [BP-1 5 c, AR 1] [BP-1 5 d]
BP-2	Disclosures in relation to specific circumstances	Additional information [BP-2]	[BP-2 9 a] [BP-2 9 b] [BP-2 10 a] [BP-2 10 b] [BP-2 10 c] [BP-2 10 d] [BP-2 11 a] [BP-2 11 b(i)] [BP-2 11 b(ii)] [BP-2 15] [BP-2 16]

1.5.9 Reconciliation with ISSB's IFRS

IFRS	Description	Section
S1 General Requirements for Disclosure of Sustainability-related Financial Information	The objective of sustainability-related financial disclosures on governance is to enable users of general-purpose financial reports to understand the governance processes, controls and procedures an entity uses to monitor, manage and oversee sustainability-related risks and opportunities.	ESRS 2 General Disclosures | Governance | The role of the supervisory, management and administrative bodies [GOV-1]
S1 General Requirements for Disclosure of Sustainability-related Financial Information	The standard requires entities to disclose information about sustainability-related risks and opportunities that could affect their prospects, the current and anticipated effects of those risks and opportunities on their business model and value chain, and how they factor into the entity's strategy and decision-making. The standard also requires entities to disclose trade-offs between sustainability-related risks and opportunities that they have considered in their decision-making processes.	ESRS 2 General Disclosures | Strategy | Material impacts, risks and opportunities [SBM-3]
S1 General Requirements for Disclosure of Sustainability-related Financial Information	The objective of sustainability-related financial disclosures on risk management is to enable users of general-purpose financial reports: (a) to understand an entity's processes to identify, assess, prioritise and monitor sustainability-related risks and opportunities, including whether and how those processes are integrated into and inform the entity's overall risk management process; and (b) to assess the entity's overall risk profile and its overall risk management process.	ESRS 2 General Disclosures | Impact, risk and opportunity management | Identification of impacts, risks and opportunities [IRO-1]
S1 General Requirements for Disclosure of Sustainability-related Financial Information	The objective of sustainability-related financial disclosures on metrics and targets is to enable users of general-purpose financial reports to understand an entity's performance in relation to its sustainability-related risks and opportunities, including progress towards any targets the entity has set, and any targets it is required to meet by law or regulation.	Targets and metrics from each topical standard chapter
S1 General Requirements for Disclosure of Sustainability-related Financial Information	The standard requires entities to disclose information about the effects of sustainability-related risks and opportunities on their financial position, financial performance, and cash flows for the reporting period, as well as the anticipated effects over the short, medium, and long term. The standard also requires entities to disclose a qualitative and, if applicable, quantitative assessment of the resilience of their strategy and business model in relation to sustainability-related risks, including information about how the assessment was carried out and its time horizon.	Anticipated financial effects from each topical standard chapter
S2 Climate-related Disclosures	The objective of climate-related financial disclosures on governance is to enable users of general-purpose financial reports to understand the governance processes, controls and procedures an entity uses to monitor, manage and oversee climate-related risks and opportunities.	ESRS 2 General Disclosures | Governance | Integration of sustainability-related performance in incentive schemes [E1.GOV-3]
S2 Climate-related Disclosures	The standard requires entities to disclose information about the climate-related risks and opportunities that could affect their prospects, the effects of these risks and opportunities on their business model and value chain, and the impacts on their financial position, performance, and cash flows. Additionally, entities are required to disclose their climate resilience and provide information on their response to climate-related risks and opportunities, including targets, mitigation efforts, and resource allocation.	ESRS 2 General Disclosures | Strategy | Material impacts, risks and opportunities [SBM-3]
S2 Climate-related Disclosures	The objective of climate-related financial disclosures on risk management is to enable users of general-purpose financial reports to understand an entity's processes to identify, assess, prioritise and monitor climate-related risks and opportunities, including whether and how those processes are integrated into and inform the entity's overall risk management process.	ESRS 2 General Disclosures | Impact, risk and opportunity management | Identification of impacts, risks and opportunities [E1.IRO-1]
S2 Climate-related Disclosures	The objective of climate-related financial disclosures on metrics and targets is to enable users of general-purpose financial reports to understand an entity's performance in relation to its climate-related risks and opportunities, including progress towards any climate-related targets it has set, and any targets it is required to meet by law or regulation.	Climate change [E1] | Impact, risk and opportunity management | Climate change adaptation targets [E1-4], Climate change mitigation targets [E1-4], Energy targets [E1-4] Climate change [E1] | Metrics | Energy consumption and mix [E1-5], Gross Scopes 1, 2, 3 and Total GHG emissions [E1-6]
S2 Climate-related Disclosures	The standard requires entities to disclose information that enables users of financial reports to understand the effects of climate-related risks and opportunities on the entity's financial position, financial performance, and cash flows. This includes disclosing quantitative and qualitative information about the current and anticipated financial effects, as well as the resilience of the entity's strategy and business model to climate-related changes. The standard also mandates the use of climate-related scenario analysis to assess climate resilience and provides guidance on the disclosure of the analysis process and key assumptions.	Climate change [E1] | Metrics | Anticipated financial effects [E1-9]

2 EU Taxonomy

Introduction to the Regulation (EU) 2020/852

EU Taxonomy Appendix

2 EU TAXONOMY

2.1 Introduction to the Regulation (EU) 2020/852

In 2020, the European Parliament adopted the EU Taxonomy Regulation, creating an EU-wide framework that helps investors and businesses determine whether certain economic activities are environmentally sustainable. Aligned with the European Union's strategic vision of promoting resilient and sustainable economies and in accordance with the climate and energy targets for 2030 and the objectives of the European Green Deal, the European Commission introduced a classification system of sustainable activities under the Taxonomy Regulation. On 4 June 2021, the European Commission introduced the Commission Delegated Regulation (EU) 2021/2139, which defines the technical screening criteria for climate change mitigation and adaptation objectives. Later, on 6 July 2021, the Commission also adopted the Commission Delegated Regulation (EU) 2021/2178 (the "Disclosures Delegated Act"), which complements Article 8 of the Taxonomy Regulation and outlines the content, methodology and format for disclosing information on the proportion of environmentally sustainable activities in the operations, investments and lending activities of both financial and non-financial undertakings. On 15 July 2022, a Complementary Climate Delegated Act was released in the Official Journal of the EU, including, under strict conditions, specific nuclear and gas energy activities in the list of economic activities covered by the EU Taxonomy.

Within the EU Taxonomy, the following six environmental objectives are identified:

- Climate change mitigation
- Climate change adaptation
- Sustainable use and protection of water and marine resources
- Pollution prevention and control
- Transition to a circular economy
- Protection and restoration of biodiversity and ecosystems.

Climate change mitigation and climate change adaptation objectives were set out in the Climate Delegated Act and have been applied since 2021, while the remaining four objectives came into force in June 2023 under the Environmental Delegated Act and are effective from this reporting year onwards.

For each one of these objectives, the Delegated Acts define which activities are eligible and/or aligned. For an economic activity to be considered eligible it is adequate to be outlined in the Delegated Act for the environmental objective to which substantially contributes. Alternatively, for an economic activity to be classified as aligned, it shall meet the following criteria:

- Meet the technical screening criteria defined for per activity.
- Do no significant harm to any of the remaining objectives.
- Comply with the minimum social safeguards' requirements.

According to the Regulation, companies are required to disclose the percentage of their eligible economic activities and the extent to which they are aligned with the above criteria through the key performance indicators defined by the Taxonomy Regulation (turnover, capital expenditure, operational expenditure).

2.2 Application of the Taxonomy Regulation to MOTOR OIL Group

To ensure full compliance with the Taxonomy Regulation, MOTOR OIL Hellas Group conducted a comprehensive evaluation of both eligibility and alignment by thoroughly assessing its economic activities against the six environmental objectives outlined in the Climate Delegated Act and the Environmental Delegated Act. Based on these assessments, the Group calculated the turnover, capital expenditure (CapEx) and operational expenditure (OpEx) associated with each identified eligible and aligned economic activity.

The scope of this analysis encompasses all consolidated subsidiaries of MOTOR OIL Group, as reported in the financial statement, in line with Regulation 2020/852 of the European Parliament and of the Council of 18 June 2020.

This year's EU Taxonomy disclosures also include data collected from the Group's subsidiaries:

- Anemos Group
- Avin Oil Group
- Associate Companies, on a voluntary basis.
- Coral Gas Group
- Coral Group
- LPC Group
- Motor Oil Renewable Energy (MORE) Group
- Motor Oil Group
- Ventus Group

For the purposes of these disclosures, the above entities will hereinafter be referred to as MOTOR OIL Group, or the Group. This report presents both eligible and non-eligible activities, as well as aligned and non-aligned ones, for the reporting period ending on December 31, 2024.

The Group's activities substantially contribute to the following environmental objectives:

- Climate change mitigation (CCM)
- Transition to circular economy (CE)
- Pollution prevention and control (PPC)
- Sustainable use and protection of water and marine resources (WTR)

2.2.1 Eligibility assessment

The Group's business activities were evaluated for eligibility based on the Taxonomy Regulation, including Delegated Regulation EU 2021/2139 ("Climate Delegated Act," as amended), Delegated Regulation EU 2022/1214 ("Complementary Climate Delegated Act") and Delegated Regulation EU 2023/2486 ("Environmental Delegated Act"). To identify eligible activities across all six environmental objectives, the assessment structured the Group's business activities according to their nature and associated NACE codes.

The Motor Oil Hellas Group's Taxonomy-eligible activities include the following:

Objective	Activity	E/T
WTR	1.1 Manufacture, installation and associated services for leakage control technologies enabling leakage reduction and prevention in water supply systems	E
PPC	2.1 Collection and transport of hazardous waste	-
PPC	2.2 Treatment of hazardous waste	-
WTR	2.2 Urban waste water treatment	-
CE	2.3 Collection and transport of non-hazardous and hazardous waste	-
CE	2.7 Sorting and material recovery of non-hazardous waste	-
CCM	3.2 Manufacture of equipment for the production and use of hydrogen	E
CCM	3.10 Manufacture of hydrogen	-
CCM	3.14 Manufacture of organic basic chemicals	T
CCM	4.1 Electricity generation using solar photovoltaic technology	-
CCM	4.3 Electricity generation from wind power	-
CCM	4.5 Electricity generation from hydropower	-
CCM	4.8 Electricity generation from bioenergy	-
CCM	4.10 Storage of electricity	E
CCM	4.13 Manufacture of biogas and biofuels for use in transport and of bioliquids	-
CCM	4.14 Transmission and distribution networks for renewable and low-carbon gases	-
CCM	5.1 Construction, extension and operation of water collection, treatment and supply systems	-
CCM	5.2 Renewal of water collection, treatment and supply systems	-
CCM	5.3 Construction, extension and operation of waste water collection and treatment	-
CCM	5.6 Anaerobic digestion of sewage sludge	-
CCM	5.8 Composting of bio-waste	-
CCM	6.5 Transport by motorbikes, passenger cars and light commercial vehicles	T
CCM	6.15 Infrastructure enabling low-carbon road transport and public transport	E
CCM	7.2 Renovation of existing buildings	T
CCM	7.3 Installation, maintenance and repair of energy efficiency equipment	E
CCM	7.4 Installation, maintenance and repair of charging stations for electric vehicles in buildings (and parking spacesattached to buildings)	E
CCM	7.7 Acquisition and ownership of buildings	-

In the financial year 2024, 2.48% of the Group's turnover, 67.08% of its CapEx and 21.37% of its OpEx were classified as Taxonomy-eligible.

2.2.2 Alignment assessment

Technical Screening Criteria (TSC)

In the next phase, each eligible activity from the Group's operations was assessed against the relevant substantial contribution criteria for Climate Change Mitigation, Circular Economy, Pollution Prevention and control and Water objectives, as specified in the Climate Delegated Act, the Environmental Delegated Act and their amendments. A thorough evaluation of the technical screening criteria confirmed that 17 out of 26, (approximately 65%) activities meet the TSC requirements.

Do No Significant Harm (DNSH)

For eligible activities that meet their respective TSC, as identified in the previous phase, the Group has applied the guidance outlined in Article 17 of the Taxonomy Regulation, along with the Climate Delegated Act and Environmental Delegated Act, to evaluate their compliance with the relevant DNSH criteria. Please refer to the 'Emblematic Activities' section for a detailed overview of the evaluation results of key economic activities that meet their respective DNSH criteria. The assessment revealed that 100% of the activities reviewed against the relevant TSC comply with the DNSH criteria.

Minimum Social Safeguards (MSS)

In addition to environmental criteria, MOTOR OIL Group also assures full compliance with the minimum social safeguards outlined in Article 18 of the Regulation[2]. These safeguards require adherence to the OECD Guidelines for Multinational Enterprises and the United Nations Guiding Principles on Business and Human Rights. They also encompass the principles and rights established in the eight fundamental conventions of the International Labour Organization (ILO) and the International Charter of Human Rights. The Group has carefully reviewed all applicable requirements and has implemented the necessary procedures and policies to align with these standards.

It is important to highlight that the Group has already been reporting under the EU Taxonomy framework and according to the latest updates of the Disclosures Delegated Act[3], it remains committed to advancing transparency and sustainability. In line with this commitment, MOTOR OIL Group has once again opted to voluntarily assess and disclose the alignment of these newly identified activities. Additionally, the Group has extended its reporting scope to include associate companies on a voluntary basis, further enhancing the comprehensiveness of its disclosures. This proactive approach reinforces its dedication to sustainable business practices, responsible investment and continuous improvement in environmental performance.

[2] Regulation (EU) 2020/852
[3] Commission Delegated Regulation (EU) 2021/2178

The Motor Oil Hellas Group's Taxonomy-aligned activities include the following:

Objective	Activity	E/T
WTR	1.1 Manufacture, installation and associated services for leakage control technologies enabling leakage reduction and prevention in water supply systems	E
PPC	2.1 Collection and transport of hazardous waste	-
PPC	2.2 Treatment of hazardous waste	-
WTR	2.2 Urban waste water treatment	-
CE	2.3 Collection and transport of non-hazardous and hazardous waste	-
CE	2.7 Sorting and material recovery of non-hazardous waste	-
CCM	3.10 Manufacture of hydrogen	-
CCM	4.1 Electricity generation using solar photovoltaic technology	-
CCM	4.3 Electricity generation from wind power	-
CCM	4.5 Electricity generation from hydropower	-
CCM	4.10 Storage of electricity	E
CCM	4.13 Manufacture of biogas and biofuels for use in transport and of bioliquids	-
CCM	4.14 Transmission and distribution networks for renewable and low-carbon gases	-
CCM	5.2 Renewal of water collection, treatment and supply systems	-
CCM	5.6 Anaerobic digestion of sewage sludge	-
CCM	5.8 Composting of bio-waste	-
CCM	6.15 Infrastructure enabling low-carbon road transport and public transport	E
CCM	7.3 Installation, maintenance and repair of energy efficiency equipment	E
CCM	7.4 Installation, maintenance and repair of charging stations for electric vehicles in buildings (and parking spaces attached to buildings)	E

Its noteworthy that in FY 2024, 2.24% of the Group's turnover, 44.38% of its CapEx and 20.92% of its OpEx qualified as Taxonomy-aligned.

2.3 Emblematic Activities

2.3.1 Revenue generating economic activities in renewable energy sources

4.1 - Electricity generation using solar photovoltaic technology

To reduce its reliance on fossil fuels for energy generation, the Group has taken a leading role in advancing research and implementing innovative projects in renewable energy. Through its commitment to sustainability, the Group has successfully developed 52 solar photovoltaic parks, collectively boasting a total capacity of 50 MW.

These efforts represent a significant step toward transitioning to cleaner, more sustainable energy sources. MOTOR OIL Group has approximately 0.03% aligned turnover, 9% aligned capex and 0.38% aligned opex.

Since the activity has not been classified as a CCA enabling activity, compliance with the DNSH criteria for CCM was not assessed. Moreover, Water & Pollution Prevention DNSH criteria were not applicable.

DNSH to Climate Change Adaptation

The activity complies with all generic criteria for DNSH to climate change adaptation. For more details, please refer to the 'General Disclosures - ESRS 2' and to 'ESRS E1 - Climate change' sections, specifically the TCFD analysis, where you can review the physical climate risks material to the activity, as well as the results of the comprehensive climate risk and vulnerability assessment.

DNSH to Transition to a Circular Economy

The activity assesses availability of and, where feasible, uses equipment and components of high durability and recyclability and that are easy to dismantle and refurbish.

DNSH to Biodiversity

The Group has conducted the relevant Environmental Impact Assessments (EIAs) for each wind park in accordance with Directive 2011/92/EU. All required mitigation and compensation measures to protect the environment have been implemented. Specifically, for sites or operations located in or near biodiversity-sensitive areas - such as the Natura 2000 network of protected areas, UNESCO World Heritage sites, Key Biodiversity Areas and other protected areas - an appropriate assessment was carried out. Based on its conclusions, no additional mitigation measures were deemed necessary, as such the activity complies with the criteria set out in Appendix D to this Annex.

4.3 - Electricity generation from wind power

MORE is a leading force in the field of RES, one of the largest RES producers in Greece and one of the most important in Southeastern Europe. MORE is an important pillar of MOTOR OIL Group's energy transition plan, as it generates renewable electricity from wind power. Specifically, the company operates a modern portfolio of 839 MW installed capacity, 94% of which is wind-based power generation units.

MOTOR OIL Group has achieved approximately 1% aligned turnover, 10% aligned capex and 14.77% aligned opex, reflecting a strong commitment to aligning its financial activities with its Transition Plan.

Since the activity has not been classified as a CCA enabling activity, compliance with the DNSH criteria for climate change mitigation (CCM) was not evaluated. Additionally, the Pollution Prevention DNSH criteria were not applicable.

DNSH to Climate Change Adaptation

The activity complies with the criteria set out in Appendix A of Annex I to Climate Delegated Act, which specifies the generic criteria for DNSH to climate change adaptation. For additional complementary information on the Group's climate risk and vulnerability assessment, including climate adaptation plans, refer to 'General Disclosures - ESRS 2' and to 'ESRS E1 - Climate change' sections.

DNSH to Water

The Group operates exclusively onshore wind and as such, its activities do not impede the achievement of good environmental status as outlined in Directive 2008/56/EC of the European Parliament and of the Council. This Directive requires that the appropriate measures are taken to prevent or mitigate impacts in relation to that Directive's Descriptor 11 (Noise/Energy), with which the Group is compliant.

DNSH to Transition to a Circular Economy

For this activity, MOTOR OIL Group assesses availability of and, where feasible, used equipment and components of high durability and recyclability and that are easy to dismantle and refurbish.

DNSH to Biodiversity

MOTOR OIL Group has performed an Environmental Impact Assessment in accordance with Directive 2011/92/EU for all onshore wind facilities. All necessary mitigation and compensation measures for protecting the surrounding environment were implemented. It is also worth mentioning that the Group has no onshore wind sites located in or near biodiversity-sensitive areas.

4.13 Manufacture of biogas and biofuels for use in transport and of bioliquids

The circular economy sector and renewable alternative fuels is an important aspect in the overall business strategy of MOTOR OIL Group, which is expanding its activities in this sector with new investments, partnerships and acquisitions. Over the last two years, significant investments have been made in both of these sectors.

The Group's aligned figures are approximately 0.1% for turnover, 0.2% for capex and 0.66% for opex.

As the activity has not been classified as a CCA enabling activity, compliance with the DNSH criteria for climate change mitigation (CCM) was not assessed. Furthermore, the Circular Economy DNSH criteria were not applicable.

DNSH to Climate Change Adaptation

The activity meets the criteria outlined in Appendix A of Annex I to the Climate Delegated Act, which defines the generic DNSH criteria for climate change adaptation. For further details on the Group's climate risk and vulnerability assessment, as well as climate adaptation plans, please refer to the 'General Disclosures - ESRS 2' and 'ESRS E1 - Climate change' sections.

DNSH to Water

The Group actively identifies and addresses environmental degradation risks, particularly those related to preserving water quality and preventing water stress, with the goal of achieving good water status and ecological potential. To manage these risks, a water-use and protection management plan is developed for any potentially affected water bodies, in consultation with relevant stakeholders. Additionally, the Group ensures that an Environmental Impact Assessment (EIA) is conducted in accordance with Directive 2011/92/EU to evaluate and mitigate any potential environmental impacts.

DNSH to Pollution Prevention and Control

MOTOR OIL Group applies a gas-tight cover on the digestate storage for biogas production and they also follow the BATs, as such no significant cross-media effects occurred.

DNSH to Biodiversity

MOTOR OIL Group has conducted an Environmental Impact Assessment (EIA) for all manufacturing facilities of biogas and biofuels for transport, as well as bioliquids, in accordance with Directive 2011/92/EU. All necessary mitigation and compensation measures to protect the surrounding environment have been fully implemented. Notably, all relevant facilities are located in a designated industrial zone, far from biodiversity-sensitive areas.

4.14 Transmission and distribution networks for renewable and low-carbon gases

CORAL GAS is constantly investing in innovation and safety. It provides all its packaged products with a special safety valve offering a set of innovative products that raise the safety level of LPG consumers in Greece.

The Group's aligned ratios stand at approximately 1% for turnover, 2% for capex and 0.28% for opex.

Since the activity is not classified as CCA enabling, its compliance with the DNSH criteria for climate change mitigation (CCM) was not reviewed. Similarly, the Circular Economy DNSH criteria were not applicable.

DNSH to Climate Change Adaptation

The activity complies with the requirements set out in Appendix A of Annex I to the Climate Delegated Act, which establishes the generic DNSH criteria for climate change adaptation. For more information on the Group's climate risk and vulnerability assessment, along with its climate adaptation plans, please refer to the 'General Disclosures - ESRS 2' and 'ESRS E1 - Climate Change' sections.

DNSH to Water

The Group mitigates environmental risks by safeguarding water quality and preventing water stress to achieve good water status. It develops a water management plan for affected areas in consultation with stakeholders and conducts Environmental Impact Assessments (EIAs) per Directive 2011/92/EU.

DNSH to Pollution Prevention and Control

All fans, compressors, pumps and other equipment used in transmission and distribution networks for renewable and low-carbon gases comply with Directive 2009/125/EC, adhering to top-class energy label requirements and relevant implementing regulations. These systems represent the best available technology.

DNSH to Biodiversity

MOTOR OIL Group has conducted an Environmental Impact Assessment (EIA) for all facilities related to the transmission and distribution of renewable and low-carbon gases, in accordance with Directive 2011/92/EU. The required mitigation and compensation measures to protect the environment have been implemented.

2.4 Accounting policy

The MOTOR OIL Group's consolidated financial statements for the 2024 financial year have been prepared in accordance with International Financial Reporting Standards (IFRS). The following sections present details on turnover, CapEx and OpEx for the Group's relevant subsidiaries, as previously introduced in this report. By translating the Group's environmentally friendly initiatives and outcomes into financial metrics - turnover, CapEx and OpEx - sinvestors and financial institutions gain a clearer perspective for making informed and strategic decisions. The methodology for calculating eligibility and alignment KPIs is outlined below:

Turnover reflects the share of net turnover generated from products or services that are taxonomy-eligible and/or aligned. The Turnover KPI provides a static snapshot of the Group's contribution to environmental objectives.

CapEx represents the portion of capital expenditure related to activities that are already taxonomy-eligible and/or aligned or are part of a credible plan to achieve taxonomy alignment. This KPI offers a dynamic and forward-looking perspective on the Group's strategy for transforming its business activities.

OpEx denotes the share of operating expenditure linked to taxonomy-eligible and/or aligned activities or the CapEx plan. It includes direct non-capitalized costs for research and development, renovation measures, short-term leases and maintenance, as well as other direct expenses necessary for the day-to-day servicing of property, plant and equipment to ensure their continued and effective use.

2.4.1 Avoiding double counting

MOTOR OIL Group ensures that double counting and intragroup effects are eliminated in the EU Taxonomy assessment through the structured approach of its financial statements and the detailed tagging of CapEx and OpEx accounts. This meticulous methodology enhances transparency, ensuring the accurate classification of financial data and maintaining consistency across the reporting period. The accounting policy has not changed during the reporting period.

To uphold regulatory compliance and best practices, the Group remains committed to closely monitoring any updates to the EU Taxonomy. It continuously refines its methodologies for capturing and reporting relevant information, integrating any modifications into its financial framework.

Furthermore, MOTOR OIL Group actively engages in internal reviews and audits to validate the accuracy of its financial and sustainability disclosures. Collaboration across departments ensures that taxonomy-related financial data is correctly allocated and aligned with regulatory requirements. This internal oversight strengthens the integrity of the Group's reporting process and supports its broader commitment to responsible and transparent corporate governance.

2.4.2 Changes in disclosures compared with the previous reporting period

With the adoption of the Environmental Delegated Act in 2023, the EU Taxonomy has been expanded to cover additional economic activities. The Group has evaluated several of these activities and determined their relevance for inclusion in its disclosures starting from the 2024 fiscal year. As presented in the 'EU Taxonomy KPIs' section and more specifically in the dedicated tables during the reporting period the Group identified additional eligible economic activities.

The eligibility and alignment percentages for turnover, CapEx and OpEx have all increased, reflecting the Group's expanded scope and continued commitment to sustainability.

The rise in the Group's aligned turnover ratio by 12% and OpEx ratio by approximately 6.95% is driven by the inclusion of additional subsidiaries and activities under the EU Taxonomy framework. Similarly, CapEx alignment ratio has also grown by circa 19%, supported by targeted investments in sustainable projects and infrastructure improvements. These increases demonstrate the Group's strategic focus on enhancing its sustainability performance through both operational expenditures and long-term capital investments.

MOTOR OIL Group's ongoing commitment to environmental sustainability is reflected in the improved alignment ratios in this year's report, further reinforcing its dedication to integrating sustainable practices into its financial and operational framework.

2.5 EU Taxonomy KPIs

The tables below present details on turnover, CapEx and OpEx for each eligible and aligned activity identified and referenced above.

2.5.1 Turnover

Proportion of turnover from products or services associated with Taxonomy-eligible and/or aligned economic activities – Disclosure covering year 2024.

Financial year 2024		2024			Substantial contribution criteria						DNSH criteria (Does Not Significantly Harm)

2.6 Disclosures on nuclear and fossil gas activities

This section provides disclosures in compliance with the public reporting requirements set out in Annex III of the Complementary Climate Delegated Act and Annex XII of the Disclosures Delegated Act. The following table presents the Group's involvement, funding, or exposure to nuclear energy and fossil gas-related activities for the financial year 2024.

Nuclear energy-related activities	Status
The Group engages in, funds, or has exposure to research, development, demonstration, and deployment of innovative electricity generation facilities that utilize nuclear processes with minimal waste from the fuel cycle.	**No**
The Group engages in, funds, or has exposure to the construction and safe operation of new nuclear installations for electricity or process heat generation, including district heating and industrial processes such as hydrogen production, as well as safety upgrades using best available technologies.	**No**
The Group engages in, funds, or has exposure to the safe operation of existing nuclear installations that produce electricity or process heat, including district heating and industrial applications like hydrogen production from nuclear energy, along with their safety upgrades.	**No**
Fossil gas-related activities	**Status**
The Group engages in, funds, or has exposure to the construction or operation of electricity generation facilities powered by fossil gaseous fuels.	**No**
The Group engages in, funds, or has exposure to the construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	**No**
The Group engages in, funds, or has exposure to the construction, refurbishment, and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels	**No**

This disclosure ensures transparency regarding the Group's activities related to nuclear and fossil gas energy sources and their alignment with the Complementary Climate Delegated Act and EU Taxonomy reporting obligations.

2.7 Associates

MOTOR OIL Group has voluntarily assessed additional associate entities beyond the scope of the EU Taxonomy to evaluate their eligibility and alignment status. This proactive initiative reflects the Group's dedication to responsible business practices by evaluating both the eligibility and alignment of these entities with the Taxonomy's environmental criteria.

The perimeter of the eligibility and alignment assessment included the following companies:

- RAPI S.A.
- THERMOILEKTRIKI KOMOTINIS
- SHELL AND MOH AVIATION FUELS A.E.
- HELLENIC FAST CHARGING SERVICES

By extending its assessment beyond regulatory requirements, MOTOR OIL Group identified that, in the financial year 2024, 15% of the CapEx and 66% of the OpEx for the Associate Companies were classified as Taxonomy-eligible, while the corresponding aligned ratios were 0.004% for CapEx and 40% for OpEx.

Below, in the tables, you will find the detailed breakdown of the analytical ratios, which provide a clearer view of the Taxonomy-eligibility alignment per activity for both CapEx and OpEx of the Associate Companies.

2.7.1 Capex

Objective	Activity	Eligible Capex Ratio	Aligned Capex Ratio
PPC	2.4 Remediation of contaminated sites and areas	0.01%	-
CCM	7.3 Installation, maintenance and repair of energy efficiency equipment	0.002%	0.002%
CCM	4.1 Electricity generation using solar photovoltaic technology	0.002%	0.002%
CCM	4.29 Electricity generation from fossil gaseous fuels	14.98%	-
TOTAL		**15%**	**0.004%**

2.7.2 Opex

Objective	Activity	Eligible Opex Ratio	Aligned Opex Ratio
PPC	2.1 Collection and transport of hazardous waste	1.32%	1.32%
CCM	6.5 Transport by motorbikes, passenger cars and light commercial vehicles	8.36%	-
CCM	7.3 Installation, maintenance and repair of energy efficiency equipment	38.71%	38.71%
CCM	7.7 Acquisition and ownership of buildings	4.18%	-
CCM	4.29 Electricity generation from fossil gaseous fuels	18.11%	-
TOTAL		**71%**	**40%**

2.8 EU Taxonomy Appendix

The key performance indicators (KPIs) for eligible (aligned and non-aligned) and non-eligible economic activities of Motor Oil Hellas Group have been calculated in accordance with the Accounting Policy outlined in the Disclosure Delegated Act 2021/2178. The following sections outline the methodology used to determine the KPIs for Turnover, Capital Expenditure (CapEx) and Operating Expenditure (OpEx).

Turnover KPI

The Turnover KPI represents the proportion of net turnover derived from products or services, including intangibles, that are associated with Taxonomy-aligned economic activities. It is calculated by dividing the net turnover related to these activities (numerator) by the total net turnover (denominator), as defined in Article 2, point (5) of Directive 2013/34/EU. Turnover is recognized in accordance with International Accounting Standard (IAS) 1, paragraph 82(a), as adopted by Commission Regulation (EC) No 1126/2008.

The KPI calculation excludes turnover derived from activities adapted to climate change under Article 11(1), point (a) of Regulation (EU) 2020/852 and Annex II of Delegated Regulation (EU) 2021/2139, unless they qualify as enabling activities under Article 11(1), point (b) of the Regulation or are themselves Taxonomy-eligible and aligned. For activities contributing to the environmental objective of climate change adaptation, the numerator includes turnover generated by enabling activities.

Capital Expenditure (CapEx) KPI

The CapEx KPI is calculated as the proportion of capital expenditure associated with Taxonomy-aligned activities, in accordance with Article 8(2), point (b) of Regulation (EU) 2020/852. The KPI is determined by dividing the numerator by the denominator, as specified in Annex I, sections 1.1.2.1 and 1.1.2.2 of Delegated Regulation (EU) 2021/2178, as amended.

Denominator

The denominator encompasses all capital investments made during the financial year, reflecting the Group's expenditures on tangible and intangible assets that contribute to long-term value creation. These additions are considered before applying depreciation, amortization, or any re-measurements resulting from asset revaluations or impairments. The denominator also includes capital expenditures arising from business combinations, ensuring a comprehensive view of the Group's investment activities.

Numerator

The numerator consists of the portion of capital expenditure included in the denominator that meets one of the following criteria:

- Directly associated with Taxonomy-aligned economic activities.
- Part of a CapEx plan to expand Taxonomy-aligned economic activities or transition Taxonomy-eligible activities to alignment, in compliance with the conditions set in the Regulation.
- Linked to the purchase of output from Taxonomy-aligned economic activities.

The numerator also specifies CapEx allocations contributing to each environmental objective. When CapEx contributes to both climate change mitigation and adaptation, but no clear separation can be made, it is included under the mitigation objective.

Operating Expenditure (OpEx) KPI

The OpEx KPI measures the proportion of operating expenditures associated with Taxonomy-aligned activities, as outlined in Article 8(2), point (b) of Regulation (EU) 2020/852. It is calculated by dividing the numerator by the denominator, as specified in Annex I, sections 1.1.3.1 and 1.1.3.2 of Delegated Regulation (EU) 2021/2178, as amended.

Denominator

The denominator encompasses direct non-capitalized costs that are essential for maintaining and enhancing the operational efficiency and sustainability of the Group's assets. These costs are incurred as part of routine business activities and are not capitalized under financial accounting principles. The key categories included in the denominator are:

- **Research and development (R&D):** Expenses, which include R&D costs that are not capitalized should be counted as eligible OpEx. If they are capitalized, they should be included as eligible CapEx.
- **Repair and maintenance:** It includes any maintenance and repair costs carried out to ensure the continued and effective functioning of the asset.
- **Short term leases:** Expenses for temporarily leasing equipment, machinery and infrastructure, providing operational flexibility without long-term financial commitments (below 12 months).
- **Building renovation measures:** This category includes non-capitalized costs related to building renovation measures carried out to ensure the continued and effective functioning of the asset.
- **Day-to-day servicing of assets of property, plant and equipment (PPE):** Expenditures related to the ongoing operation, upkeep and management of the Group's physical assets to ensure their safe and efficient use.

Numerator

The numerator consists of the portion of OpEx included in the denominator that meets one of the following conditions:

- Associated with Taxonomy-aligned assets or processes, including research and development for cleaner energy solutions, workforce training on sustainability practices and human resource adaptation.
- Linked to the purchase of output from Taxonomy-aligned economic activities or individual measures enabling target activities to reduce greenhouse gas emissions or transition to low-carbon operations.

If OpEx is not material to the business model of a non-financial undertaking, the following disclosures apply:

- The numerator of the OpEx KPI is set to zero, as per Annex I, section 1.1.3.2 of Delegated Regulation (EU) 2021/2178.
- The total OpEx denominator value is disclosed.
- A qualitative explanation is provided to justify the non-materiality of operational expenditures in the business model.

3 CLIMATE CHANGE [E1]

3.1 Strategy

3.1.1 Transition plan for Climate Change Mitigation [E1-1]

MOTOR OIL Group is dedicated to promoting sustainable development in alignment with key global initiatives such as the European Green Deal, the Paris Agreement and the United Nations' Sustainable Development Goals.

Decarbonization and Energy Transition is the foundation of the MOTOR OIL Group's strategic plan with the aim of becoming an Integrated Energy company trusted by its stakeholders.

In response to challenges, a strategic priority is to reduce carbon emissions in Group's activities and to increase the portfolio of climate resilience for the next decade, looking forward to net-zero in 2050. Driven by the latest global developments, the Group's decarbonization strategy aims to mitigate the effects and adapt to climate change, while committing to energy transition and low-carbon economy by setting ambitious carbon reduction targets.

MOTOR OIL Group is committed to deliver an ambitious Energy Transition plan which will transform the Group into a Sustainable, Diverse, Multi-Energy leader in Southeastern Europe. This involves investments in new sustainable technologies, leading the way in renewable energy penetration to Group portfolio and enhancing energy efficiency for Group's own activities and customers.

MOTOR OIL Group's goal is to create services and solutions for its customers and long-term value for its shareholders by investing in the energy transition, preparing for a shifting Energy market.

Climate goals and alignment with global targets

Group's commitment to sustainability is resolute and is reflected as mentioned above in the strategic plan. In this context, MOTOR OIL Group has set a net zero goal by 2050. Using 2021 as the baseline year, MOTOR OIL Group has set climate reduction targets by 2030, as outlined below:

Goal	Target	Timeframe
Reduce Scope 1 & 2 emissions by 30% (2021 baseline)	**30%** Reduction	**By 2030**
Scope 3 emissions (2021 baseline/ according to Net-zero scenario)	**25%** Reduction*	**By 2030**

* Market outlook predictions based on data from IA for the global energy demand and global oil demand and National Climate and Energy Plan for the Greek market outlook of NG. This accomplishment of the scope 3 target is conditional to the requirements of N scenario. If future policies and regulations steer Motor Oil Group toward a trajectory aligned with the European market outlook where for the N scenario, European oil demand is projected to decline by approximately 30% (compared to a 15% reduction in international markets) the resulting decrease in Scope 3 emissions could enable the Group to achieve its current Scope 3 emissions reduction target of -25% by 2030. Market outlook predictions based on data from IA for the global energy demand and global oil demand and National Climate and Energy Plan for the Greek market outlook of NG.

To achieve these ambitious targets, MOTOR OIL Group has developed a detailed roadmap outlining the necessary measures to deliver the required absolute savings in its industrial activities. The Group continuously benchmarks its approach against the targets and plans announced by industry peers, ensuring alignment with best practices and industry standards. Furthermore, the Group acknowledges its role in contributing to a sustainable energy mix. As part of this commitment, MOTOR OIL Group prioritizes producing power with low carbon intensity, thereby further reducing its environmental footprint and promoting a cleaner energy transition.

In the short-term (1 to 5 years), MOTOR OIL Group is navigating a period of rapid transformation along with an evolving geopolitical context marked by increasing policy pressures, energy security concerns and shifting alliances. The immediate focus is on substantial investments in low-carbon and renewable energy projects such as solar, wind, hydrogen, as these are becoming integral to its core strategy. This rapid shift is driven by both the urgency of climate commitments and the geopolitical landscape where energy independence and security are becoming priorities for many countries. As traditional oil and gas markets face volatility due to geopolitical tensions, sanctions and trade policies, the Group is forced to accelerate divestment from high-carbon assets and reinvest in cleaner, locally viable energy solutions. Financially, the Group adopts active strategies to reallocate resources efficiently, managing both the risks and opportunities arising from this accelerated shift, mitigate risks associated with geopolitical instability while capturing opportunities in new, more environmentally friendly markets, aligning closely with evolving regulatory frameworks and carbon pricing mechanisms. The short-term strategic financial planning is explicitly outlined in the MOTOR OIL's "Strategy & Outlook Targets 2030".

The medium-term horizon (5 to 15 years) builds on this transformative momentum by scaling up and integrating these new environmentally friendly initiatives into the MOTOR OIL Group's operations and identity. This phase focuses on deepening the transition as the Group starts to mature as a diversified energy player. It involves ramping up large-scale renewable energy projects and clean technology solutions, expanding into areas such as green hydrogen and carbon capture and storage. In this term MOTOR OIL Group needs to be adaptable to changing geopolitical realities, such as regional energy transitions, shifts in global trade routes and new bilateral or multilateral agreements. In addition, the medium term is characterized by driving operational and technological innovation to reduce costs, enhance efficiencies and achieve greater scalability in clean energy projects. Financial planning is centered around ensuring sustainable growth, with a focus on leveraging new revenue streams from low-carbon businesses and reinforcing MOTOR OIL Group's position as a competitive and resilient entity in a future energy landscape.

The long-term horizon (15 to 25 years) sees MOTOR OIL Group reaching the peak of its transformation journey, aiming for net-zero emissions and establishing itself as a leading force in sustainable energy. The strategy shifts from growth to consolidation, with a focus on complete decarbonization across the value chain. By this stage, MOTOR OIL Group is not just an energy provider but a key player in national sustainability efforts, leveraging its diversified portfolio to offer integrated solutions that combine renewable energy, alternative fuels and circular economy principle. Financial strategies in the long - term horizon rely on innovative instruments such as green bonds, sustainability-linked financing and long-term impact investments to support continued growth in a low-carbon economy. The Group's role involves shaping the future energy landscape, influencing international negotiations and fostering cross-border collaborations that align with both climate goals and geopolitical realities.

Key steps and actions per Scope 1,2,3 and as per company

MOTOR OIL Group demonstrates tangibly its commitment to reduce its carbon footprint and thus contribute to the sustainable protection and preservation of the environment. Through its strategic plan, it is focused on decarbonization of its own activities and its product portfolio, by undertaking and participating in the design and implementation of innovative research projects. The Group is actively working to minimize its carbon emissions across all facets of its operations through strategic investments, innovative technologies, and forward-thinking initiatives. The Group is committed to expanding its renewables business, which will lower the carbon intensity of its energy generation. Through these concerted efforts, MOTOR OIL Group remains dedicated to achieving its emissions reduction targets and advancing its sustainability goals in line with global climate objectives. The transition plan includes:

- Carbon capture and storage project
- Green Hydrogen production
- Sustainable production of E–fuels
- Advanced biofuels and recycled fuel production
- Renewable energy production with solar and wind power
- Acquisitions and investments in new, low carbon projects
- Transition energy through CCGT plant and FSRU
- E-mobility development with an increased number of EV charging stations
- Energy efficiency optimization
- On site RES and Battery storage installations
- Innovative processing and digital technologies

Emblematic projects

MOTOR OIL Group is driven by its determination to contribute to the preservation of the environment, energy and digital transition through the participation in EU and national co-funded programs such as:

BLUE MED is an integrated large-scale investment project that demonstrates an industrial ecosystem of ultra-low carbon hydrogen production and supply as a clean energy vector. This ecosystem is integrated with a scalable and flexible supply chain network that will deliver the hydrogen safely and reliably to end consumers throughout Greece and internationally. In the context of Blue Med, the following two sub-projects have been submitted for funding in EU and national funding programs and schemes:

IRIS (CCUS) project, funded by the EU Innovation Fund, is a flagship initiative of MOTOR OIL for the decarbonization of the Agioi Theodoroi Refinery in Corinthia, Greece, with significant impact on a national, regional and European scale. IRIS project is an important step towards achieving the industrial goals for environmental protection and enhances the effort for sustainable energy production, which makes it a pioneer at national and European level. This is a low carbon hydrogen and methanol production by large scale carbon capture project which comprises an innovative, heavily integrated point-source CCUS technology solution, applied on its current hydrogen production process and its coupling to a small-scale methanol production unit, which will utilize part of the captured CO_2 as feedstock.

The project has been granted in 2023 for 127 m€ from Innovation Fund. The project 's carbon capture solution on Refinery's Steam Methane Reforming Unit (SMR) reducing its GHG emissions by capturing 495.6 kMT CO_2 demonstrating an industrial ecosystem of ultra-low carbon hydrogen (blue H_2) production and supply it as a clean energy vector.

The Hydrogen Stream's GHG emissions are expected to be reduced by 89% (net) effectively transforming its currently produced grey hydrogen to blue with a footprint of approximately 1,894 tCO_2e/H_2 over the whole value chain (from capture to storage), well below the taxonomy compliance limit of 3 t CO_2/Mt H_2 and an estimated Blue H_2 production of 55,280 t/year. At the same time, part of the captured CO_2 will be combined with electrolytic H_2 produced by an electrolyzer (see EPHYRA project) on premises to produce e-methanol as a low-carbon energy carrier for mobility purposes and other industrial usage. The methanol production will be demonstrated at a small scale (10,000 t/year) to assess its integration in the plant and pave the way for further scaling-up in order, to a) increase the utilization of the amount of captured CO_2, b) develop e-methanol into a major output product (e-fuel). The remaining captured CO_2 will be compressed, liquefied and transported by ship for final storage. In view of the increased energy needs, the project will be supplied for the 17,6 MW of extra power required from its wind and solar parks developed by its subsidiary Motor Oil Renewable Energy (MORE). Further to that, MOTOR OIL will seek to achieve the highest level of energy integration with the refinery to minimize the energy needs of the project.

It has to be noted that the planned industrial growth initiatives will lead to an incremental increase of approximately 200 kilotons in Scope 1 & 2 emissions by 2030. To balance this increase and achieve an overall emissions reduction target, the Group has outlined a comprehensive strategy, leveraging process and efficiency optimization. These measures, estimated to contribute around 350 kMT CO_2, include fuel switch and energy efficiency measures concerning the refinery operations. Fuel switch measures concern hydrogen and biomethane use for heat and power generation and electrification of equipment (heaters and boilers). The project receives funding from the Innovation Fund program under Grant Agreement No. 101133015. (https://www.iris-ccus-project.eu)

GREEN HYDROGEN Project involves the design, construction and installation of infrastructure to produce renewable hydrogen via electrolysis at MOTOR OIL's industrial facility in Agioi Theodoroi, Corinth and its compression and transportation/distribution to end-users. This will be the first large-scale renewable hydrogen production facility in Greece. More specifically, the Green Hydrogen Project, which has already received funding by EU mechanisms and programs (RRF, Horizon Europe/Clean Hydrogen Partnership, Connecting Europe Facility – Transport, EIB Loan) has the following scope: design and engineering of an 30MW (up-scalable to 50MW) electrolyzer and ancillary/related infrastructure; establishment of a novel logistics system for the compression and distribution of renewable hydrogen within Greece; investment in a new hydrogen network in the industrial facility leading to a new compression terminal, conditioning and metering.

The following EU funded projects co-support the development of the Green Hydrogen Project:

I. **TRIERES** project aims at creating a small-scale Hydrogen Valley with geographical reference to the MOTOR OIL Refinery of Ag. Theodoroi in Corinth. That is a hydrogen ecosystem in Greece, linking the green hydrogen production unit that the company is developing there within the EPHYRA project with businesses, technology providers, academic and research institutions, public sector organisations and local government bodies, becoming potential off takers. The project provides an important opportunity for the implementation of hydrogen pilot projects (city buses, passenger vehicles, shipping, power plant) and studies of hydrogen use for existing or future applications and synergies with existing and future hydrogen valleys in the EU (Netherlands, Austria, Cyprus) and Egypt. The TRIERES Valley has a tremendous upward perspective over a large part of the Balkans, South-Eastern Europe and the wider area of Eastern Mediterranean. The project started in July 2023, is implemented by a consortium of 26 partners from 5 different countries and is expected to be completed by the end of April 2028. This project is supported by the Clean Hydrogen Partnership and its members Hydrogen Europe and Hydrogen Europe Research under Grant Agreement No. 10111056. (https://www.trieres-h2.eu)

II. **EPHYRA** is a highly innovative and pioneering project as it will demonstrate an innovative hydrogen production facility at industrial scale, from renewable energy sources, by employing improved electrolysis technology. The large-scale electrolysis will be integrated with industrial operations within Motor Oil's Corinth Refinery, one of the top refineries in Europe and the largest privately-owned industrial complex in Greece. The project started in June 2023, is implemented by a consortium of 10 partners from 7 different countries and is expected to be completed by the end of May 2028. The project is supported by the Clean Hydrogen Partnership and its members Hydrogen Europe and Hydrogen Europe Research under Grant Agreement No. 101112220. (https://ephyraproject.eu/)

III. **REA** for the construction of the 1st publicly accessible HRS (Hydrogen Refueling Station) in Agioi Theodoroi (Corinth, Peloponnese, Greece). The project started in November 2021, is implemented by AVINOIL and is expected to be completed by April 2025. The project receives funding from the Connecting Europe Facility – Transport program under Grant Agreement No. 101079451.

IV. **REAH2** for the construction of the 2nd publicly accessible HRS (Hydrogen Refueling Station) in Akrata (Peloponnese, Greece). The project started in April 2023, is implemented by AVINOIL and is expected to be completed in Q4 2025. The project receives funding from the Connecting Europe Facility – Transport program under Grant Agreement No. 101119200.

V. **REAH3** for the construction of the 3rd HRS for public transport means – buses in the bus depot of OSY at Thriasio, Attiki. The project started in November 2023, is implemented by AVINOIL and is expected to be completed in Q4 2026. The project receives funding from the Connecting Europe Facility – Transport program under Grant Agreement No. 101165972.

MOTOR OIL Group's EU-funded decarbonization projects are built on the belief that real change happens when diverse stakeholders come together - each bringing their own perspective, expertise and drive for a more sustainable future. Below, the Group introduces a selection of EU-funded projects that illustrate its commitment to collaborative decarbonization.

Horizon Europe Projects		Duration	Description
FAME	Funding from the Horizon Europe program under Grant Agreement No. 101092639. (https://www.fame-horizon.eu/)	Jan 23-end of 25	Deploy and launch to the global market a unique, trustworthy, energy-efficient, and secure federated data marketplace for Embedded Finance (EmFi). The project is implemented by a consortium of 33 partners from 18 different countries.
AURORA	Funding from the Horizon Europe program under Grant Agreement No. 101096521. (https://aurora-heu.eu/)	Jan 23-Jun 26	Acceleration of deployment of integrated CCUS chains based on solvent capture technology. The project is implemented by a consortium of 13 partners from 6 different countries.
decagone	Funding from the Horizon Europe program under Grant Agreement No. 101069740. (https://decagone.eu/)	Jun 22-May 26	Development of a demonstrator of industrial carbon-free power generation from ORC-based waste-heat-to-energy systems. The project is implemented by a consortium of 16 partners from 10 European countries.
BioTheRoS	Funding from the Horizon Europe program under Grant Agreement No. 101122212. (https://www.biotheros.eu/en/home/)	Oct 2023-Sep 26	Development of a holistic methodology that will boost the scale-up of sustainable biofuels via thermochemical conversion technologies. The project is implemented by a consortium of 6 partners from 6 European countries.

Horizon Europe Projects		Duration	Description
COREu	Funding from the Horizon Europe program under Grant Agreement No. 101136217. (https://coreu.eu/)	Jan 2024-Dec 28	Showcase essential technologies within the Carbon Capture and Storage (CCS) value chain and facilitate the establishment of three new CCS pathways in Central-East Europe (CEE). The project is implemented by a consortium of 39 partners from 12 European countries.
FUELPHORIA	Funding from the Horizon Europe program under Grant Agreement No. 101118286. (https://fuelphoria.eu/)	Oct 23-Sep 27	Showcase sustainable, end-to-end value chains for advanced biofuels and Renewable Fuels of Non-Biological Origin (RFNBOs). The project is implemented by a consortium of 22 partners from 9 different countries.
SAFe CRAFT	Funding from the Horizon Europe program under Grant Agreement No. 101138411. (https://safecraft.eu/)	Dec 23-Nov 27	Showcasing four key technologies that enable the use of Sustainable Alternative Fuels (SAFs) in waterborne transport. by demonstrating the safety and practicality of these fuels for both new and existing ships, helping to accelerate their adoption across the industry. The project is implemented by a consortium of 10 partners from 6 European countries.
theus	Funding from the Horizon Europe program under Grant Agreement No. 101172877.	Sep 24-Aug 27	Showcase advanced methodologies and tools supporting hybrid grids implementation across High Voltage (HV), Medium Voltage (MV), and Low Voltage (LV) levels. To successfully achieve its objectives, the project will develop a set of six planning and six operation solutions, that will be validated in five use cases addressing the most representative challenges faced by European grids. The project is implemented by a consortium of 15 partners from 8 different countries.

DIORIGA GAS FSRU is a new Liquified Natural Gas (LNG) import terminal based on the Floating Storage and Regasification Unit (FSRU) configuration being developed by Dioriga Gas S.A., a fully owned subsidiary of MOTOR OIL Group. It is expected to strengthen the Greek NG network, eliminate EU dependence on Russian fossil fuels (REPowerEU objective) and ultimately enhance energy diversification, even for the non-connected to the NG network areas, via the use of LNG as a cleaner, affordable and secure transition fuel. The infrastructure supporting the FSRU shall incorporate the ability to accommodate renewable fuels, including hydrogen. The FSRU and all related installations will be supplied with electricity from land (cold ironing) from renewable energy sources, ensuring zero carbon operations. The project has received the status of "Strategic Investment" under respective national law.

Investments in emission reductions

The Group aims to invest more than 4 billion euros by 2030 in executing one of the largest energy transition programs in the region. These investments will be allocated across various initiatives aimed at driving sustainability, reducing carbon emissions (RES development, petrochemicals, biofuels, natural gas, hydrogen, decarbonization) and enhancing resilience (facilities maintenance, logistical improvements, digitalisation and efficiency & HSSE projects).

These investments represent a commitment to delivering tangible results in the Group's transition towards a more sustainable energy future by 2030.

Moreover, in 2024 capital expenditure (Capex), investments in environmentally sustainable activities aligned with taxonomy standards resulted to €139,802,346.08 accounting for 44.38% of the total Capex of the Group. Additionally, operational expenditure (Opex) on environmentally sustainable activities aligned with taxonomy standards amounted to €30,155,553.22, constituting 20.92% of the total Opex incurred by the group. Finally, as part of Group's resilience program aimed at strengthening energy security and infrastructure development, investments in oil and gas-related economic activities during the reporting period amounted to approximately €200 million.

Assessment of locked-in emissions

Carbon Lock-in is a path-dependence phenomenon consisting of an inertial resistance to the transition process to carbon-efficient technologies as entire sectors continue relying on carbon-intensive technologies. Carbon Lock-in is the outcome of highly path-dependent decision processes related to carbon-emitting technologies, infrastructure, practices and their supporting networks that are currently constraining future paths, making it more challenging, even impossible, to subsequently pursue more optimal paths toward low-carbon objectives. In path-dependent processes, inertial resistance to large-scale systematic shifts is self-reinforced with time, due to initial favorable social and economic conditions driving increasing returns, thereby diminishing and possibly excluding more efficient alternatives, as any locked-in system aims at maintaining the status quo. As a matter of fact, Carbon Lock-in generates constant market and policy failures that discourage the implementation of carbon-saving technologies regardless of their high-cost efficiency or environmental advantages: the result is that the decarbonization process is ineffective due to the high difficulty in eroding the deep dependencies that perpetuate the lock-in state.

Concretely, the International Energy Agency (IEA) and the Intergovernmental Panel on Climate Change (IPCC) discovered that constant investment in carbon-emitting technologies instead of more carbon-efficient alternatives would cause the investment cost to increase fourfold in the longer term, while reducing the chance to achieve ambitious climate goals. In this sense, investing in assets prone to lock-in increases the costs of achieving agreed climate protection goals considering that carbon-intensive investments could not be usually easily converted into a more sustainable solution. This generates a high Carbon Lock-in risk, as it is reinforced once a carbon-intensive technology keeps operating even if economically preferable lower-carbon alternatives exist for its replacement.

MOTOR OIL Group is committed to developing a Carbon Lock-in Risk methodology, engaging in a comprehensive analysis of the existing frameworks. The methodology's scope encompasses the complete range of business activities, including subsidiaries; for the refinery, representing more than the 97% of overall emissions and considering the specific characteristics of the sector and the lack of a sectoral benchmark, a specific approach has been developed, in coherence with IEA and NZE Scenario.

The methodology is developed not only for determining Group's existing carbon locked-in emissions in business activities, but for being a decision-making tool for future investments aligned to the climate scenarios and to guide its transition plan: the level of Carbon Lock-in risk will be used to pivot attention and corrective measures on those business activities that are rated as at high risk of Carbon Lock-in.

The Carbon Lock-in methodology includes critical assumptions made to determine the dynamic mechanism of its evaluation along with the critical assumptions made to determine these risks. This includes the source of the applied third-party evaluation and the rationale behind their relevance for the chosen application.

MOTOR OIL will ensure to enhance the quality of the assessment, increasing the quality of data and their granularity for the next years. MOTOR OIL is engaging in updating the methodology every year reflecting, among other things, lessons learned by its use, the experience of other stakeholders, regulatory requirements and the development of external tools and reference works.

The Assessment of the Carbon Lock-In Risk is aligned with the scope of the Corporate Sustainability Reporting and includes all business activities of MOTOR OIL and its subsidiaries. For each company included in the assessment the relevant business activities have been identified, including all activities listed as "EU Taxonomy eligible" and defining categories for "EU Taxonomy non eligible". It is based on a stepwise approach; assessment of each step is carried out sequentially and it is dependent on the outcomes of the previous one.

The interdependency between the steps is a crucial characteristic of the methodology, as specific results of the assessment can lead to an overall evaluation of the business activity as "low risk of Carbon Lock-in" (i.e. if the technical assessment steps results in a low technical Carbon Lock-in risk related, there is no necessity to move forward to the institutional assessment step; similarly, a low institutional Carbon Lock-in risk hinders the implementation of the economic assessment).

The methodology considers three types of risks:

a) technical/sectoral; **b)** institutional; **c)** financial.

After the assessment, the carbon lock-in risk, is classified as follows:

RISK

LOW RISK OF CARBON LOCK-IN

activity has less than 2,500 tons CO/year;

activity is eligible and there is not a TSC for Climate Change Mitigation;

activity is aligned to the EU Taxonomy (including enabling and transitional aligned activities):

activity with a defined contribution to climate goals (i.e. renewable energy production);

activity with less than 1.000.000.00 € CAPEX in the year of the assessment

activity has a LOW technical risk;

activity has a MEDIUM/HIGH technical risk and a LOW institutional risk.

RISK

MEDIUM RISK OF CARBON LOCK-IN

activity has more than 2,500 tons CO/year but less than 20,000;

activity is eligible and enabling or transitional but not aligned with a TSC for Climate Change Mitigation;

activity has a MEDIUM technical risk and a MEDIUM/HIGH institutional risk and a LOW/MEDIUM/HIGH financial risk.

RISK

HIGH RISK OF CARBON LOCK-IN

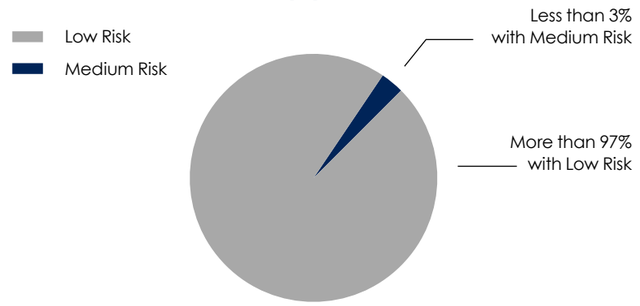

Activity has a MEDIUM technical risk and a HIGH institutional risk and a LOW/MEDIUM/HIGH financial risk.

The assessment led to the following results:

>97 %
of the emissions have a Low Carbon Lock-in risk;

<3%
of the emissions have a Medium/Low Carbon Lock-in risk.

RISK OF CARBON LOCK-IN (%)

Low Risk of Carbon Lock-In

Medium Risk of Carbon Lock-In

High Risk of Carbon Lock-In

MOH BUSINESS ACTIVITIES	Final Result
1.1 Manufacture, installation and associated services for leakage control technologies enabling leakage reduction and prevention in water supply systems.	RISK
2.1 Collection and transport of hazardous waste	RISK
2.2 Treatment of hazardous waste	RISK
2.2 Urban waste water treatment	RISK
2.3 Collection and transport of non- hazardous and hazardous waste	RISK
2.7 Sorting and material recovery of non-hazardous waste	RISK
3.2 Manufacture of equipment for the production and use of hydrogen	RISK
3.10 Manufacture of hydrogen	RISK
3.14 Manufacture of organic basic chemicals	RISK
4.1 Electricity generation using solar photovoltaic technology	RISK
4.3 Electricity generation from wind power	RISK
4.5 Electricity generation from hydropower	RISK
4.8 Electricity generation from bioenergy	RISK
4.10 Storage of electricity	RISK
4.13 Manufacture of biogas and biofuels for use in transport and of bioliquids	RISK
4.14 Transmission and distribution networks for renewable and low-carbon gases	RISK

MOH BUSINESS ACTIVITIES	Final Result
5.1 Construction, extension and operation of water collection, treatment and supply systems	RISK
5.2 Renewal of water collection, treatment and supply systems	RISK
5.3 Construction, extension and operation of waste water collection and treatment	RISK
5.6 Anaerobic digestion of sewage sludge	RISK
6.5 Transport by motorbikes, passenger cars and light commercial vehicles	RISK
6.15 Infrastructure enabling low-carbon road transport and public transport	RISK
7.2 Renovation of existing buildings	RISK
7.3 Installation, maintenance and repair of energy efficiency equipment	RISK
7.4 Installation, maintenance and repair of charging stations for electric vehicles in buildings (and parking spaces attached to buildings)	RISK
7.7 Acquisition and ownership of buildings	RISK
Refining activity (not eligible)	RISK
Offices/transportation	RISK
Fuel stations	RISK
Fuel storage deposits	RISK

MOTOR OIL's strategy is coherent with sectoral decarbonization as the Group strategy considers several actions to reduce CO_2 emissions and these are related to low carbon products, biofuels and RES and the Group is transitioning to a new model. Furthermore, the EU policies in force (EU-ETS) support and incentivize the efforts of the Group.

Internal Carbon Pricing assessment

MOTOR OIL Group is committed to developing an Internal Carbon Pricing (ICP) methodology to mitigate risk, to hedge against future energy price increases and to better align with business opportunities in the transition to a low-carbon economy aligning to the Paris Agreement goals. Also, an Internal Carbon Pricing Program (ICPP) will be implemented to internalize the external cost of climate change in the broadest possible range of economic decision making and in setting economic incentives for clean and sustainable development. The ICP will be integrated with the related Assessment of carbon locked-in emissions and the Climate Scenarios by the end of 2025.

The ICP includes critical assumptions made to determine the dynamic mechanism of price definition along with the critical assumptions will be made to determine these prices; ICPs are based on scientific guidance and how the methodology foresees to estimate their future values along with science-based carbon pricing trajectories. In designing the Program, the Group also considers the management system to monitor and evaluate how ICPs are consistent with financial statements, especially concerning asset valuation and impairment assessments. The ICPP will enable MOTOR OIL to make decarbonization, a company-wide effort through internal carbon fees and incorporating carbon pricing data as an input to other financial evaluative measures and to the assessment of the Carbon Lock-in Risk. Carbon price applied according to the type of scheme and any relevant critical assumptions made to calculate it, will be available after the planned assessment that is to be conducted.

The methodology covers Scope 1 and Scope 2 emissions of all business activities (eligible and not eligible for the EU Taxonomy) and sets exclusion for the calculation of ICP based on threshold for some non-relevant activities in terms of emission. Activities covered with a carbon price, namely under the EU-ETS or the ETS2 in the specific case, are included in the methodology with a specific approach as the ICP is represented by the market value of the allowances. For all business activities, the methodology foresees an assessment of the existence an explicit, implicit (including shadow) carbon price, with the scope of determining the Marginal Costs of Abatement (MACs) and the comparison with alternative scenarios, including the ones presented in the official Strategy document of MOTOR OIL and the ones aligned to the NZE scenario. Subsequently, the methodology identifies how to prioritize ICP, based on the significance of the MOTOR OIL Group's parameters, namely the overall strategy, its material topics and the financial cash-flow. Finally, for the definition of the ICPP the methodology includes a clear process to integrate the ICPs as a shadow cost of carbon for investment evaluation and as a tool to guide the decarbonization strategy.

Compliance with climate regulations

EU Taxonomy

To ensure full compliance with the Taxonomy Regulation, MOTOR OIL Group conducted an evaluation of both eligibility and alignment by thoroughly assessing its economic activities against the six environmental objectives outlined in the Climate Delegated Act and the Environmental Delegated Act. Based on these assessments, the Group calculated the turnover, capital expenditure (CapEx) and operational expenditure (OpEx) associated with each identified eligible and aligned economic activity. The scope of this analysis encompasses all consolidated subsidiaries of MOTOR OIL Group, as reported in the financial statement, in line with Regulation 2020/852 of the European Parliament and of the Council of 18 June 2020.

This year's EU Taxonomy disclosures also include data collected from the Group's subsidiaries:

- ANEMOS Group
- AVIN OIL Group
- Associate Companies, on a voluntary basis
- CORAL GAS Group
- CORAL Group
- LPC Group
- MOTOR OIL RENEWABLE ENERGY (MORE) Group
- MOTOR OIL S.A.
- VENTUS Group

This report presents both eligible and non-eligible activities, as well as aligned and non-aligned ones, for the reporting period ending on December 31, 2024.

The Group's activities substantially contribute to the following environmental objectives

- Climate change mitigation (CCM)
- Transition to circular economy (CE)
- Pollution prevention and control (PPC)
- Sustainable use and protection of water and marine resources (WTR)

EU ETS

Oil Refining is included in the EU-ETS 1; for the sector a specific methodology for the attribution of free allowances was established. In the CWT (CO_2 weighted tonne) approach a factor is assigned to each refinery process unit. Each unit's CWT factor is the ratio of the unit's CO_2 emissions to the CO_2 emissions of a crude distillation unit, with both units operating under "standard" conditions, i.e. at a standard level of energy performance and using a standard fuel. The refinery-wide CWT is the sum, over all the refinery units, of the product of each unit's CWT factor by the corresponding unit throughput over a given time period. An additional term accounts for other refinery activities outside of process units, such as blending, storage etc. A refinery's CWT is an activity function that correlates well with refinery's CO_2 emissions at a standard level of CO_2 emissions performance, while its real CO_2 emissions reflect the actual level of CO_2 performance of the refinery. To ensure consistency between emission sources included in actual emissions and in CWT and to comply with the specific requirements of the EU ETS Directive regarding electricity (no free allowance to be granted to electricity production) corrections had to be applied to both emissions (starting from the verified site emissions reported under the EU ETS) and CWT. Oil refining benchmark is defined by the Regulation (0,228 tonCO_2/CWT, to be updated in Q1 2026) and set the level of free emissions of the refinery. Nevertheless, for the evaluation of the transition plan and the alignment to the Paris Agreement goals, the IEA Net Zero approach can be used.

Concerning Carbon Lock-in Risk (CLR): Oil refining accounts for more than 97% of the Group's total emissions and, hypothetically, could represent the highest-risk asset in terms of carbon lock-in. However, based on the Carbon Lock-in Risk assessment, this activity is classified as low risk, since its emissions are regulated under the EU Emissions Trading System (EU ETS). Furthermore, the inclusion of oil refining in the EU ETS, along with the compliance obligations imposed by the relevant regulation, ensures a low institutional risk of carbon lock-in. As such, the institutional assessment phase assigns a LOW rating, and the overall risk outcome remains LOW.

Concerning Internal Carbon Pricing (ICP): Within the ICP the Marginal Abatement Cost (MAC) will be represented by the market price that will be compared to possible solutions to reduce CO_2 emissions with a lower cost.

The sale of petroleum products is (partially) covered by the new ETS2. As part of the 2023 revisions of the ETS Directive, a new emissions trading system named ETS2 was created, separate from the existing EU ETS. This new system will cover and address the CO_2 emissions from fuel combustion in buildings, road transport and additional sectors (mainly small industry not covered by the existing EU ETS). The ETS2 will complement other policies of the European Green Deal in the covered sectors, helping Member States achieve their emission reduction targets under the Effort Sharing Regulation (ESR). So far, emission reductions in those sectors have been insufficient to put the EU on a firm path towards its 2050 climate neutrality goal. The carbon price set by the ETS2 will provide a market incentive for investments in building renovations and low-emissions mobility. The ETS2 will become fully operational in 2027. Although it will be a 'cap and trade' system like the existing EU ETS, the ETS2 will cover emissions upstream. All emission allowances in the ETS2 will be auctioned, without any free allocation.

During the first three years the ETS2 is operational, if the price of allowances exceeds €45 (in 2020 prices, i.e. adjusted for inflation), additional allowances may be released from the ETS2 market stability reserve to address excessive price increases. Allowances may also be released from this reserve if the price of allowances increases too rapidly. The rules and conditions for such a release are specified in the ETS Directive. In case of exceptionally high gas or oil prices in 2026, the start of the ETS2 system could be postponed to 2028 to ensure a smooth implementation.

The MOTOR OIL entities regulated under the ETS2 will be required to surrender sufficient allowances to cover their emissions. As in the ETS2 the allowances will be sold and purchase in auctions and no free allowances will be given to regulated entity, it is necessary to forecast the budget of emissions covered by the ETS2 and allocate the proceed to be compliant with the Regulation.

Concerning CLR: the institutional assessment phase will set the risk as LOW and the final result will be always LOW.

Concerning ICP: in the ICP the MAC will be represented by the market price that will be compared to possible solutions to reduce CO_2 emissions with a lower cost.

National Climate Law

The National Climate Law (4936/2022 (A' 105)) - "Transition to climate neutrality and adaptation to climate change, emergency provisions for addressing the energy crisis and protecting the environment" was issued in 2022. The aim is to create a framework for improving the country's adaptive capacity, climate resilience and the gradual transition to climate neutrality by 2050. In order to achieve the long-term goal of climate neutrality, intermediate climate targets are set for the years 2030 and 2040 as follows: Reduction of net anthropogenic greenhouse gas emissions by at least 55% in 2030 and by 80% in 2040 compared to 1990 levels. The National Energy and Climate Plan (NECP) is taken into account in achieving the targets.

Articles 19 and 20 define the obligated parties (companies and installations). Companies subject to article 20 are obliged to report annually their carbon footprint emissions. Motor Oil, NRG, MORE and Coral Gas are the MOTOR OIL's Group companies subject to article 20. In 2024 the second carbon footprint report was submitted from the referred companies. The report includes scope 1 & 2 and is verified.

Respectively, installations covered from article 19 except those that are under ETS schemes, are required to reduce emissions by at least thirty percent (30%) by 2030 compared to 2019, by reference to the appropriate product and project unit, depending on the type of activity. According to competent authorities' instructions, by the end of 2025 for all existing projects and activities, a report shall be

submitted to the competent environmental licensing authority to demonstrate compliance with the emission reduction target. From 2026, the operator of the project or activity shall submit to the licensing environmental authority by 31 October of each year.

Fossil fuel activities

MOTOR OIL Group's goal is to create services and solutions for customers and long-term value for its shareholders by investing diligently in the energy transition, preparing for a shifting Energy market. The Group is enhancing the efficiency and sustainability of the refinery operations, leveraging digitization and innovation to minimize its carbon footprint, while ensuring the energy security of the country in a rapidly evolving geopolitical landscape.

MOTOR OIL Group's refinery supports the energy transition reliably with products that the world needs now and until new sustainable technologies mature. To ensure improved and reliable operation of the refinery, the Group is continuously investing in initiatives that can optimize the refinery's performance, upgrade its products and reduce its environmental footprint. Key actions for this improvement are:

1. 160,000 tpa propylene production unit diversifying the refinery's product mix. Construction to be completed by 2025
2. Storage capacity expansion to be completed by 2025 (+40,000 m^3)
3. New port facilities (Athina) to materially expand processing, storage and trading capacity (+5 mn tons throughput potential)
4. Development of 250,000+ tpa advanced biofuel production program

Integration with corporate strategy

MOTOR OIL climate change transition plan is a strategic roadmap fully integrated into the Group's overarching business strategy and long-term financial planning. It reflects the Group's commitment to align with the European Green Deal, Fit for 55 targets and evolving regulatory frameworks, including the EU Taxonomy and CSRD. The plan supports MOTOR OIL's transformation from a conventional refining company into a diversified, low-carbon energy group, while maintaining business resilience and profitability.

The transition plan sets clear decarbonization milestones, with more than €2.5 billion, as part of the €4 billion total, in planned investments by 2030 to enable structural changes across operations, product offerings and energy systems. A key component is the expansion of renewable electricity generation to 2 GW by 2030, supporting the Group's goal of producing clean power and achieving energy independence.

The plan also prioritizes the production of sustainable fuels, including the commissioning of a 250 ktpa advanced biofuel production program, 60 ktpa of low-carbon hydrogen and 25 ktpa of e-methanol by 2029. These fuels are expected to support the decarbonization of transport, shipping and industry. Additionally, the Group aims to expand its biodiesel capacity to 200 ktpa through co-processing of biogenic feedstocks, advancing circular economy objectives.

Importantly, the transition plan incorporates a Carbon Capture and Storage (CCS) project designed to capture and permanently store CO_2 emissions from refinery operations. This initiative will be a critical enabler for reducing Scope 1 emissions and achieving long-term carbon neutrality targets. The CCS project is aligned with the EU Innovation Fund priorities and demonstrates the Group's proactive approach to hard-to-abate sector decarbonization.

The transition plan is embedded in financial planning, with expected shifts in capital allocation, new revenue streams and changes in EBITDA composition. By 2030, over 40% of Group EBITDA is projected to come from non-fossil activities. Investments will be financed through a mix of retained earnings, project-level financing and sustainability-linked financial instruments, ensuring long-term viability and value creation for investors, customers and other stakeholders.

Leadership approval and governance

The Board of Directors and management have an important role in supporting the long-term success of the business while considering climate-related risks that might impact operations and value for shareholders.

The Group has formed a Sustainability Committee with the goal of approving and overseeing the Group's Sustainable Development Policy and Strategy, as well as monitoring performance against set targets and deciding on corrective actions in relation to the opportunities or risks that may exist.

Progress reporting and transparency

Climate-related metrics play a pivotal role within the MOTOR OIL Group's governance, strategy and risk management framework, forming an integral part of its decision-making processes.

These metrics are treated with the same level of importance as other key performance indicators (KPIs) and key risk indicators (KRIs), creating a feedback loop that evolves over time. By incorporating climate related metrics into its governance structure, the Group gains valuable insights into the potential impacts of climate-related risks and opportunities across various aspects of its operations. These metrics help the Group anticipate and address financial and operational implications associated with climate risks and opportunities over specific time frames. Moreover, whenever possible and relevant, the Group includes indicators related to GHG Emissions, Energy Efficiency, Carbon intensity, Climate Risk Exposure, sustainable investments according to EU taxonomy (climate mitigation and adaptation).

MOTOR OIL Group has conducted an internal assessment in accordance with ESRS E1.16(g) to determine whether the undertaking meets the eligibility criteria for inclusion in the EU Paris-Aligned Benchmarks (PAB), as defined in Commission Implementing Regulation (EU) 2022/2453 and the Climate Benchmark Regulation (EU 2020/1818).

Based on this assessment, MOTOR OIL Group has evaluated its revenue composition, business activities and emissions profile in relation to the exclusion thresholds outlined in Article 12.1 and Article 12.2 of the Climate Benchmark Regulation.

According to Article 12.1, companies are excluded from the PAB if they meet any of the following conditions:

- Deriving 1% or more of revenues from coal and lignite extraction, mining, or distribution.
- Deriving 10% or more of revenues from oil exploration, extraction, distribution, or refining.
- Deriving 50% or more of revenues from natural gas exploration, extraction, manufacturing, or distribution.
- Deriving 50% or more of revenues from electricity generation with a GHG intensity greater than 100 gCO_2e/kWh.

The Group operates in the oil refining, fuel trading and energy production sectors, with significant revenue generated from oil refining, fossil fuel distribution and natural gas trading. Given these activities, MOTOR OIL Group currently exceeds the exclusion thresholds for oil and gas-related revenues, which impacts its eligibility for inclusion in the Paris-Aligned Benchmark.

Additionally, Article 12.2 states that benchmark administrators must exclude companies that are estimated to significantly harm environmental objectives, as defined by the EU Taxonomy Regulation (EU 2020/852). MOTOR OIL Group has been assessing the alignment of its operations with the EU Paris-Aligned Benchmarks (PAB) since 2022. This evaluation follows the criteria set by Commission Implementing Regulation (EU) 2022/2453 and the Climate Benchmark Regulation (EU 2020/1818).

Although the Group is currently excluded from the PAB, it recognizes the importance of aligning with global climate investment benchmarks and remains committed to achieving long-term sustainability and financial resilience.

Transition KPIs /Milestones

MOTOR OIL Group has developed a robust transition plan underpinned by quantifiable KPIs and clear forward-looking milestones, reflecting its commitment to decarbonisation, renewable energy expansion and the development of sustainable fuels.

Key Performance Indicators for the reporting year (KPIs)

- CO_2e emissions avoided through renewable energy sources: 820,668 tonnes
- Taxonomy-aligned capital expenditure: €315.02 million
- Taxonomy-aligned revenue: €394.67 million
- RES (Renewable Energy Sources) capacity in operation: 839 MW
- EV charging infrastructure deployed: 1,629 charging points
- Investments in innovation and digital transformation: €18.2 million

Milestones

MOTOR OIL has set clear transition milestones and KPIs as part of its decarbonisation and circular economy strategy. The Group aims to develop 2 GW of renewable energy capacity by 2030, reinforcing its position in clean electricity generation. It plans to commission an advanced biofuel production facility with over 250 ktpa capacity, supporting low-carbon transport alternatives. In the area of hydrogen, the Group targets approximately 60 ktpa of low-carbon hydrogen production by 2029, supported by CCS technology and aligned with industrial decarbonisation needs. Similarly, around 25 ktpa of e-methanol production is expected by 2029, reflecting growing market demand in the shipping and chemical sectors. Moreover, biodiesel production capacity is set to reach 200 ktpa through the co-processing of biogenic feedstocks, reinforcing the Group's commitment to circular economy principles and sustainable fuels.

3.1.2 Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model [E1.SBM-3]

MOTOR OIL Group has undertaken a comprehensive assessment of material climate-related impacts, risks and opportunities across its value chain. The Group recognizes that its operations, particularly oil refining and fuel distribution, contribute significantly to greenhouse gas (GHG) emissions, energy consumption, air and water pollution, biodiversity degradation and hazardous waste generation. These are acknowledged as long-term negative environmental impacts arising from core industrial activities. These impacts are long-term in nature and material across multiple business areas.

At the same time, positive climate-related impacts are being realized through growing investments in renewable energy projects (such as solar and wind farms), biofuels, green hydrogen and energy efficiency technologies. These investments help reduce emissions, improve environmental outcomes and support the Group's shift toward sustainable energy solutions.

The Group has identified a range of climate-related risks and opportunities affecting its key business sectors, including Refining, Biofuels, Renewable Energy Sources (RES) Power, Hydrogen Production and Natural Gas Trade etc. These are evaluated across short- (1–5 years), medium- (5–15 years) and long-term (15–25 years) horizons. This time horizon refers to the transition plan and differs from time horizon as describes in the ESRS framework (Additional Information [BP-2]). Please also note that these climate-related risks have been identified in the context of Climate – related Scenario Analysis that the Group has conducted.

Transition Risks stem from the evolving policy and regulatory landscape (e.g., the EU Green Deal, Fit for 55), technological disruption, shifting market demands and reputational pressures linked to carbon-intensive operations.

Physical Risks include both acute threats such as flooding, storms and heatwaves and chronic pressures such as sea-level rise and temperature variability, which pose challenges to infrastructure, supply chains and operational continuity.

Opportunities arise from expanding into clean energy markets - renewables, green hydrogen, biofuels and energy trading - and from embracing circular economy models and sustainable construction practices.

These identified impacts and risks are not treated in isolation but form a critical input into the Group's forward-looking strategy. MOTOR OIL is actively transforming from a traditional oil and gas operator into a multi-energy provider committed to decarbonization, innovation and circular economy. Its ambition is to achieve net-zero emissions by 2050.

This transformation is guided by scenario-based resilience assessments, ensuring the Group remains agile and responsive under various climate and market futures. This forward-thinking approach positions MOTOR OIL Group to not only mitigate its environmental footprint but also capitalize on emerging opportunities in a transitioning global energy landscape.

Climate resilience analysis

Scope

MOTOR OIL Group fully acknowledges the significant environmental impact its operations - and those of its subsidiaries - can have. While various aspects of the Group's activities contribute to atmospheric emissions, the organization is firmly committed to addressing these impacts with transparency, responsibility and a forward-looking approach.

In response to the growing complexity of climate-related challenges, the Group conducts comprehensive resilience analyses to evaluate its exposure to both physical and transition risks associated with climate change. This analysis encompasses the Group's core business operations and extends across the value chain - covering both upstream and downstream activities.

The Group's climate risk screening process spans nearly 100% of its operational sites, ensuring that all location-specific climate vulnerabilities - including those related to assets and business functions - are rigorously assessed. This evaluation is supported by a combination of internal data and leading external sources, including:

- The IPCC 5th and 6th Assessment Reports
- Regional Climate Change Adaptation Plans
- Socio-economic scenarios from the Network for Greening the Financial System (NGFS)
- The Greek National Energy and Climate Plan (NECP)
- The S&P Global Climanomics Platform, which supports the Group's proprietary Climate Risk Assessment

By integrating these scientific and policy-driven tools, MOTOR OIL Group is well-positioned to proactively identify, assess and manage climate-related risks across its portfolio. This robust approach reinforces the Group's resilience and strengthens its positioning as a leader in the energy transition. As such, no material physical or transition risks were excluded from the analysis.

Scenario Analysis

The Group conducts scenario analysis to assess the potential impacts of climate change on its operations, supply chain and market dynamics. These analyses help the Group enhance its adaptation and mitigation strategies, ensuring alignment with global climate objectives and regulatory frameworks. By evaluating different climate scenarios, including those consistent with a 1.5°C global warming trajectory, the Group can proactively identify financial, operational and strategic risks and opportunities associated with the transition to a low-carbon economy. Further details on the scenario analysis methodology and key findings are provided in Chapter E1, IRO-1 of this report, where a comprehensive assessment of climate resilience is outlined.

MOTOR OIL Group conducts an analysis of GHG emissions pathways and temperature scenarios to assess potential future impacts on its operations and the broader business environment.

The methodology of MOTOR OIL Group's scenarios analysis consists of two basic steps.

1. The first step includes the definition of the time horizons and the scenarios used as well as the drivers in each scenario. The drivers include climate, commercial and geopolitical aspects, regulatory compliance and carbon pricing. Furthermore, an uncertainty impact assessment of each driver is included.
2. The second step is evaluating the resilience of Group's portfolio and investment plans against each scenario. For each scenario the Group analyzes its main impacts (e.g. operational resilience, strategic implications, economic impact). The assessment is based on quantification of every sector's reduction pathway (e.g. refining, distribution etc.).

The scenarios analysis involves evaluating different Representative Concentration Pathway (RCP) scenarios. The quantitative analysis of the risks and opportunities, climatic and economic data are those derived by scenarios developed by IPCC Assessment reports AR5[4] and AR6[5].

Scenario of Weak Policies: Climate mitigation actions are delayed, thus the GHG emissions continue to rise throughout the 21st century and the global mean temperature increases above 3°C at the end of the century. Climate risks and opportunities are mainly related to physical impacts as both the chronic and acute climate change effects are significant.

In this scenario, the Group evaluates the potential consequences of unchecked emissions growth, including more severe climate-related events, stricter regulatory measures and increased pressure from stakeholders to decarbonize. Within this framework, the Group assesses how extreme weather events, rising sea levels and other climate-related risks associated with RCP 8.5 could affect infrastructures, supply chain resilience and long-term business viability. This leads to a better understanding of potential future range outcomes and to strategies that mitigate risks, capitalize on opportunities and contribute to global efforts to address climate change. This analysis affects decision-making processes, guiding investments, operations and sustainability initiatives to align with the most likely future scenarios while maintaining resilience in the face of uncertainty. In addition, thorough assessments of various policy action scenarios are conducted to understand their potential impact on climate goals and business operations.

[4] IPPC, AR5 Fifth Assessment Report (https://www.ipcc.ch/assessment-report/ar5/)
[5] IPPC, AR6 Synthesis Report: Climate Change 2023 (https://www.ipcc.ch/report/sixth-assessment-report-cycle/)

Scenario of Current Policies: Transition to a lower carbon future is in line with the Paris Agreement. Climate mitigation policies are stronger compared to the previous scenario and lead to global mean temperature increases between 2°C and 3°C at the end of the century.

In this scenario, the potential implications of regulatory measures, technological advancements and product demand aimed at reducing carbon emissions are considered. The Group assesses also, how a trajectory consistent with RCP 4.5 could impact its operations, including potential changes in energy demand, regulatory compliance requirements and investment risks and opportunities in low-carbon technologies.

Net Zero scenario: Incorporation of strong climate mitigation policies and shows a pathway for the global energy sector to achieve net zero CO_2 emissions by 2050, consistent with limiting the global temperature rise to 1.5 – 2.0°C up to the end of this century with no or limited temperature overshoot.

In this scenario, MOTOR OIL Group evaluates the implications of emission reduction targets, accelerated deployment of renewable energy sources and rapid transition to low-carbon technologies. The critical point of this assessment is when the policies will be launched. This issue leads to challenges as well as to opportunities which require significant investments in clean energy infrastructure while positioning it as a leader in sustainable energy solutions:

Late Policy Action - Limited to 1.5°C but with High Cost: Delayed policy intervention leads to the need for more drastic and costly measures to achieve the 1.5°C warming limit. The MOTOR OIL Group assesses the potential financial impacts of delayed regulatory actions, including higher compliance costs and increased pressure from stakeholders to accelerate decarbonization efforts. Late policy action underscores the importance of proactive risk management and strategic planning to mitigate financial risks and ensure the Group's resilience in a rapidly changing regulatory landscape.

No Additional Policy Action - Limited to 2°C with Stronger Policies Needed: Limited additional policy action beyond existing commitments, results to global warming limited to 2°C above pre-industrial levels. The MOTOR OIL Group analyzes the implications of insufficient regulatory measures, such as increased climate-related risks and market uncertainty. While current policies may fall short of the 1.5°C target, the Group identifies opportunities to advocate for stronger climate policies, invest in resilience measures and innovate to reduce emissions and mitigate climate risks. By evaluating these policy action scenarios, the Group gains valuable insights into potential regulatory developments and their impact on the energy sector. This analysis informs strategic decision-making, enabling the Group to adapt to evolving climate policies and maintain its long-term competitiveness while contributing to global efforts to combat climate change.

Market outlook in 2030 according to WP, CP and NZ scenarios			
Driver	Weak Policies (WP) Scenario	Current Policies (CP) Scenario	Net Zero (NZ) Scenario
Total Energy demand	10%	3%	-8%
Oil demand	5%	-5%	-15%
Natural gas demand	5%	-5%	-16%

Estimated emissions reduction (tCO_2e) - All scenarios

Estimated emissions reduction (tCO_2e) 2030 - NZ _EUR scenario					
Driver	Scope 1	Scope 2	Scope 3	Scope 1&2	All Scopes
Energy demand - Production volume	-337,885.7	-5,000.2	-7,152,454.7	-342,885.9	-7,495,340.6
Oil demand	-571,635.5	-15,539.4	-12,859,191.0	-587,174.9	-13,446,365.9
Natural gas demand	-6,985.4	-189.9	-116,014.6	-7,175.3	-123,189.9
TOTAL	**-916,506.6**	**-20,729.5**	**-20,127,660.2**	**-937,236.1**	**-21,064,896.4**

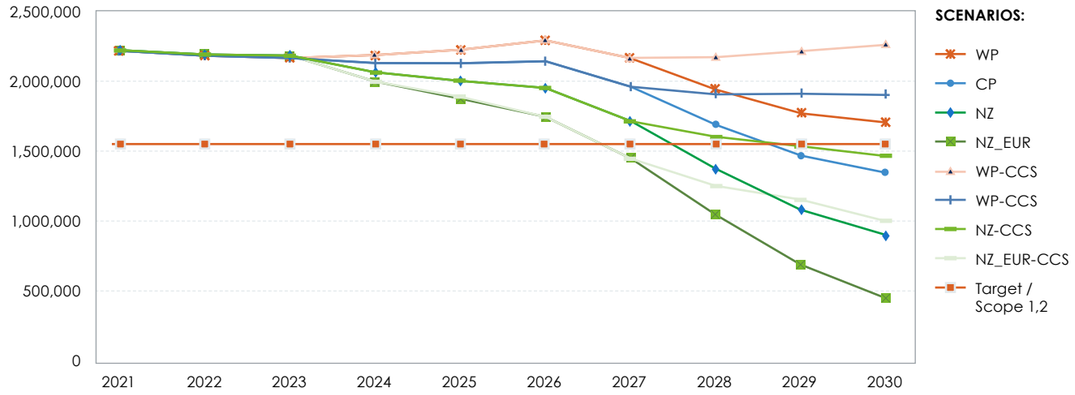

The MOTOR OIL Group reduction plan as described in the Group's "Energy Transition Strategy and Outlook Targets 2030", has been quantitatively included in the reduction scenarios tool.

The main scenarios analysis and results focused on the three basic scenarios described (WP, CP, NZ) and additionally a NZ scenario where the CCS project would not be implemented before 2030.

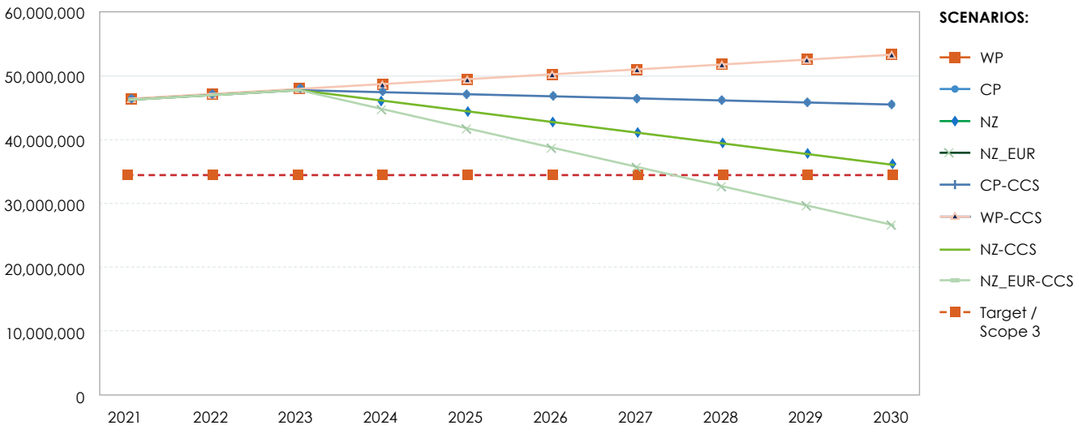

The Group's reduction plan as outlined in the "Energy Transition Strategy and Outlook Targets 2030" could potentially reduce emission derived from scope 1&2, up to 770 $ktCO_2e$ per year. Under Current Policies (CP) and NZ Scenarios it would very likely that the scope 1&2 targets could be reached. In any case fulfilment of scope 1&2 target is highly dependent on the implementation of the CCS project and related actions, as these would cover the majority (~70%) of the emissions impacts for Scope 1&2. The market outlook predictions for NZ scenario are based on data from IEA for the global energy demand and global oil demand and National Energy and Climate plan for the Greek market outlook of NG. However, the IEA predictions for the European energy and European oil demand differ significantly to the global outlook. If future policies and regulations steer MOTOR OIL Group toward a trajectory aligned with the European market outlook - where global oil demand is projected to decline by approximately 25% (compared to a 5% reduction in international markets) - the resulting decrease in Scope 3 emissions could enable the Group to achieve its current Scope 3 emissions reduction target of -25% by 2030.

Summary of emissions reduction to 2030 for all scenarios		
Scenario	Absolute Scope 1,2 emissions 2030	Absolute Scope 3 emissions 2030
	Target: -30 %	**Target: -25 %**
Scenario WP	-23 %	15 %
Scenario CP	-39 %	-1 %
Scenario NZ	-59 %	-25 %
Scenario NZ_EUR	-80 %	-43 %
Scenario WP w/o CCS	2 %	15 %
Scenario CP w/o CCS	-14 %	-1 %
Scenario NZ w/o CCS	-34 %	-25 %
Scenario NZ_EUR w/o CCS	-55 %	-43 %
Scenario Base + Reduction Plan	-38 %	0

Emissions (tCO_2e) | Scope 1,2

Emissions (tCO_2e) | Scope 3

Resilience of the Group's strategy

The Group has already developed a multi-dimensional climate strategy that allows for a smooth adaptation to stricter regulations and carbon pricing mechanisms, reduction of financial risk and ensuring long-term resilience.

The Resilience Strategy is based on the above climate policy scenarios and includes the following key pillars:

a diversified energy portfolio with expansion into renewable energy sources, investments in natural gas, biofuels and hydrogen and development of electromobility infrastructure.

financial and operational resilience through revenue diversification beyond the refining sector, carbon capture initiatives, digitization investments, improvements in the supply chain and infrastructure.

adaptation to Regulations and the Market through compliance with EU climate policies and active participation in sustainability frameworks.

adopting measurable GHG reduction and decarbonization goals and

formulating a climate transition plan aligned with the 1.5°C target.

Time Horizons of Analysis

MOTOR OIL Group employs scenario analysis across three defined time horizons to systematically assess climate-related risks and opportunities, ensuring strategic resilience in an increasingly dynamic energy environment.

Short-term (1–5 years): This period marks a phase of rapid transformation driven by geopolitical developments, evolving policy frameworks and heightened energy security concerns. The Group's focus is on accelerating investments in low-carbon and renewable energy projects, while actively managing operational and financial risks amid market volatility.

Medium-term (5–15 years): During this phase, the Group aims to scale up green initiatives and embed them across its operations. Emphasis is placed on the expansion of clean technologies, advancement in green hydrogen production and deployment of carbon capture solutions, all while adapting to shifting global trade dynamics and increasingly stringent regulatory landscapes.

Long-term (15–25 years): Representing the full realization of the Group's strategic transition, this horizon focuses on achieving net-zero emissions and becoming a leader in sustainable energy solutions. Key priorities include value chain-wide decarbonization, integration of circular economy principles and adoption of sustainable financing tools to secure MOTOR OIL Group's role in shaping the future energy system.

Further insights into the implications of these time horizons for strategic planning can be found in the chapter titled "Transition Plan for Climate Change" within this report.

3.2 Impact, risk and opportunity management [E1.SBM-3]

3.2.1 Policies and actions related to Climate Change Adaptation [E1-2] [E1-3]

MOTOR OIL Group has developed a structured framework to address material impacts, risks and opportunities related to climate change adaptation. This framework is embedded within the Group's Environmental Policy and broader Sustainability Policy, ensuring that climate resilience is integrated into all aspects of operations and strategic planning. The Group's Climate Change Adaptation Strategy outlines a systematic approach to assessing and mitigating climate-related risks. This includes identifying vulnerabilities within infrastructure and operational processes to determine necessary adaptation measures.

MOTOR OIL Group's adaptation policies account for a wide range of climate-related physical risks, including acute events such as hurricanes, floods and extreme heat that can disrupt operations and damage infrastructure, as well as chronic risks like rising sea levels and temperature shifts, which may impact assets and supply chains over the long term. These risks are integrated into the Group's investment planning and risk management processes to minimize financial and operational exposure.

To strengthen resilience, the Group applies stringent engineering and design standards to new infrastructure, while existing assets undergo climate risk assessments to identify and implement necessary upgrades. Site selection and land-use policies prioritize areas with lower climate vulnerability, supported by contingency planning for high-risk zones.

In its renewable energy operations, the Group mitigates physical risks through resilient infrastructure design, careful land-use planning and targeted adaptation measures. Collaboration with government bodies, local communities and industry partners ensures coordinated risk management and collective resilience-building.

Furthermore, the Group incorporates climate scenario analysis into project planning to proactively identify and address potential climate-related impacts. These insights are regularly communicated to stakeholders, ensuring transparency on how climate risks and opportunities influence strategic and operational decisions.

Operational adaptation measures include modifications in maintenance schedules, upgrades to critical infrastructure and the deployment of early warning systems for extreme weather events. The Group implements emergency response protocols and business continuity plans to minimize disruption in the event of climate-related incidents. Supply chain policies incorporate risk assessments to address potential disruptions caused by climate hazards, ensuring continued operational stability.

As will be further detailed, MOTOR OIL Group's policies also focus on energy efficiency and emissions reduction as part of its adaptation efforts. Investments in process optimization, digital monitoring systems and lower-carbon technologies contribute to overall climate resilience. Operational policies promote the use of climate scenario analyses to anticipate long-term regulatory, market and physical climate risks. All business activities are certified under ISO 14001:2015, a framework for implementing adaptation measures across all business units. Environmental risk assessments, conducted in accordance with certification requirements, help the Group align its climate policies with best practices. Compliance with national and international climate adaptation frameworks is monitored to ensure continuous alignment with evolving regulatory standards.

As part of its climate adaptation strategy, MOTOR OIL Group has implemented the "Forest Program", a nature-based initiative focused on preserving biodiversity, restoring degraded ecosystems and enhancing climate resilience.

The program operates through three pillars: seed collection and conservation; large-scale plant cultivation through forestry nurseries, with a combined potential of over 3.5 million plants; and targeted reforestation projects across 52 hectares of fire-affected areas in Attica. Beyond reforestation, the program supports research, innovation and long-term environmental monitoring, with a carbon mitigation potential of approximately 208 tCO_2 - demonstrating the Group's commitment to ecosystem restoration and sustainable land use.

Physical risks are also intertwined with transition risks, particularly for the Group's renewable energy activities. The reliability and efficiency of renewable energy infrastructure may be impacted by extreme weather events, temperature fluctuations, water availability and resource variability. Coastal renewable energy projects, such as offshore wind farms, face additional risks due to rising sea levels and coastal erosion. To mitigate these risks, the Group incorporates climate risk assessments and scenario analysis into project planning, collaborates with stakeholders to enhance resilience and adopts robust design and land-use strategies to safeguard infrastructure.

The Group is addressing the transition risks through strategic investments in renewable energy projects and alternative fuels, recognizing both the risks and opportunities presented by the transition. More specifically transition risk analysis highlighted the need for accelerated diversification into biofuels, green hydrogen and electrification, as well as resilience against carbon pricing above €100/ton through efficiency and circular economy strategies. By expanding into clean energy sectors, the Group aligns with decarbonization efforts while enhancing its market appeal to environmentally conscious investors.

As a result of the resilience and scenario analysis, MOTOR OIL Group is accelerating its energy transition strategy by reallocating significant CAPEX toward green technologies and climate-resilient infrastructure, updating business continuity and risk management frameworks with site-specific adaptation measures and reinforcing its net-zero by 2050 ambition and multi-energy growth trajectory. The analysis demonstrates the Group's ability to adapt its strategy and business model over the short-, medium- and long-term by shifting its product and service portfolio toward low-carbon and renewable solutions, securing continued access to finance at an affordable cost of capital, redeploying and upgrading existing assets, planning the decommissioning of carbon-intensive infrastructure and investing in the accelerated diversification of its operations - particularly in biofuels, green hydrogen and the electrification of energy services - while also reskilling its workforce to support and sustain this transformation.

Participation in EU programs focused on alternative fuel technologies, as well as investments in mature technologies such as RES and EV chargers, further strengthen the Group's positioning within the evolving energy landscape.

Engagement with stakeholders ensures transparency and awareness of mitigation efforts, while policies are made publicly available to all potentially affected parties through the Environmental Impact Assessment (EIA) plan. The Group actively communicates its environmental and climate-related policies via public consultation processes, regulatory filings and stakeholder forums, ensuring accessibility for communities, regulatory bodies and partners. Additionally, stakeholders who play a role in policy implementation are engaged through targeted meetings, training sessions and collaborative initiatives to ensure alignment and effective execution of the Group's sustainability objectives.

Climate risk oversight is managed by the Sustainability Committee, which includes members of the Board of Directors and senior management. The Committee is responsible for evaluating adaptation strategies, monitoring policy implementation and ensuring that climate-related risks are addressed through structured mitigation measures. CapEx/OpEx in decarbonization actions referenced in taxonomy chapter and also E1-1.

3.2.2 Targets related to Climate Change Adaptation [E1-4]

MOTOR OIL Group recognizes the critical importance of climate change adaptation in ensuring the long-term resilience of its operations, supply chains and the communities in which it operates. The Group acknowledges that adapting to climate-related risks, including extreme weather events and shifting environmental conditions, is essential for sustainable business continuity. While adaptation remains a key consideration in the Group's broader sustainability strategy, specific quantitative targets for climate change adaptation have not yet been formally established. MOTOR OIL Group has conducted a climate resilience analysis, but its outcome has not been fully evaluated yet in order to set specific targets. MOTOR OIL Group continues to assess the evolving regulatory landscape, industry best practices and scientific advancements to integrate adaptation measures effectively. The Group remains committed to enhancing climate resilience and will continue to evaluate and refine its approach in alignment with global frameworks and stakeholder expectations.

Adaptation to physical climate risks is closely linked to mitigation efforts, as reducing emissions and improving energy efficiency lower CO_2 concentrations, ultimately decreasing climate-related risks. To enhance climate resilience, MOTOR OIL Group has implemented a comprehensive adaptation strategy across its operations, infrastructure and supply chains. The Group integrates climate risk assessments into planning, reinforces infrastructure to withstand extreme weather and prioritizes low-risk site selection. It has also developed business continuity plans and supply chain risk assessments to minimize climate disruptions. Additionally, it invests in green technologies, closed-loop water systems and biodiversity initiatives, such as the Forest Program.

Alongside these adaptation measures, MOTOR OIL Group has set key environmental targets, reviewed and updated annually, including:

Water Management: Reducing water consumption and improving efficiency.

Waste Management: Minimizing waste generation and promoting circular economy practices.

3.2.3 Policies and actions related to Climate Change Mitigation [E1-2] [E1-3]

MOTOR OIL Group has developed and implements a climate change mitigation strategy aimed at reducing greenhouse gas (GHG) emissions, transitioning to low-carbon energy sources and aligning its operations with global decarbonization targets. The Group's mitigation approach is embedded within its broader Environmental and Sustainability Policies and it's implemented through internationally recognized standards, including ISO 14001 and ISO 50001 while follows the respected climate related laws.

Key Mitigation Policies and Actions:

Net-Zero Commitment: The Group is committed to achieving net-zero emissions by 2050, supported by interim targets including a 30% reduction in Scope 1 and Scope 2 emissions and 25% in Scope 3 emissions by 2030.

Investments in Renewables: Strategic investments have been made in solar and wind power projects, alongside alternative fuel technologies, including biofuels and green hydrogen, primarily within the Refining and Power & Gas sectors.

Energy Efficiency & Process Optimization: Operational improvements include digital monitoring systems, energy efficiency enhancements, "green fuels" deployment and lower-carbon technologies aimed at reducing emissions intensity.

Carbon Capture and Storage (CCS): Consideration is being given to CCS technologies as part of long-term mitigation strategies.

Onsite Renewable Solutions & RECs: The Group is actively exploring onsite renewable installations and the purchase of Renewable Energy Certificates (RECs) to lower emissions and support clean energy production.

Stakeholder Alignment: Engagement with stakeholders ensures transparency and awareness of mitigation efforts, while policies are made publicly available to all potentially affected parties through the Environmental Impact Assessment plan.

Participation in EU Programs: The Group takes part in European alternative fuel initiatives and sustainable finance programs, enhancing its credibility and positioning in the evolving low-carbon economy.

Please refer to table titled "Estimated emissions reduction(tCO_2e)-All Scenarios". Please note that nature-based solutions have not been implemented as part of MOTOR OIL Group's climate change mitigation strategy yet.

3.2.4 Targets related to Climate Change Mitigation [E1-4]

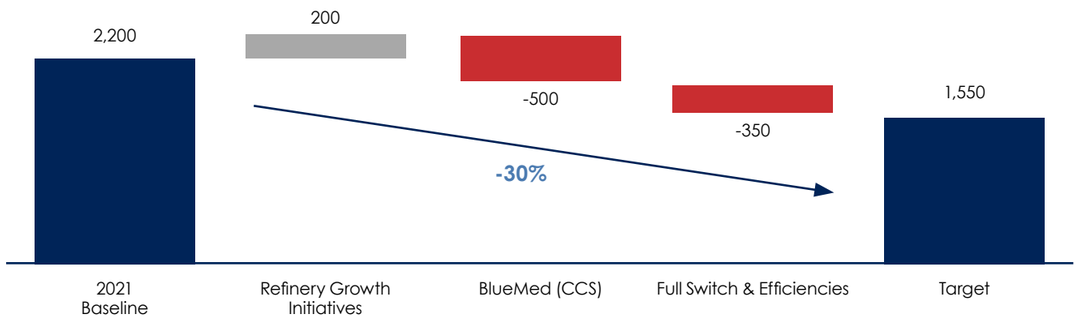

In setting its climate change mitigation targets, MOTOR OIL Group considered a comprehensive set of drivers reflecting both market dynamics and environmental imperatives. Key inputs included projections for energy demand, aligned with expected production volumes and long-term growth patterns, as well as shifts in oil and natural gas demand under various transition scenarios.

The increasing pace of electrification, driven by sustainable mobility (e.g., electric vehicle adoption) and the broader decarbonization of end-users - from residential to industrial sectors - was also factored in, alongside growing demand for renewable energy sources (RES) and the transformation of the electricity grid. The Group evaluated trends in biofuel and bioenergy consumption, as well as the emerging role of low-carbon hydrogen, recognizing their potential to support emissions reduction across hard-to-abate sectors. In addition, technological advancements, evolving climate policies and carbon pricing mechanisms were critical drivers influencing target setting. The analysis also incorporated geopolitical developments affecting energy security and the increasing prevalence of extreme weather events, which underscored the urgency of addressing climate-related physical risks. Together, these factors shaped a science- and scenario-informed mitigation pathway aligned with the Group's long-term sustainability and resilience objectives.

In developing its climate change mitigation targets, MOTOR OIL Group engaged proactively with key stakeholders to ensure alignment with its internal sustainability goals and the expectations of the wider external environment. This process involved dialogue with investors, regulatory authorities, customers, employees, industry partners and local communities - either directly or through their representatives - whose insights contributed to shaping a climate strategy that is scientifically grounded. More specifically The Group's mitigation targets related to environmental matters are grounded in conclusive scientific evidence and aligned with internationally recognized frameworks such as the Paris Agreement, the European Green Deal and the United Nations Sustainable Development Goals (SDGs). These targets are informed by climate scenario analyses, sectoral decarbonization pathways and data from authoritative sources including the Intergovernmental Panel on Climate Change (IPCC) and the International Energy Agency (IEA).

A key target within its decarbonization strategy is to achieve a 30% reduction in Scope 1 and Scope 2 emissions by 2030, using 2021 as the baseline year This 30% reduction will come as a result of approximately 1% reduction in GHG Scope 2 emissions and the rest (approx. 29%) in GHG Scope 1 emissions. This target reflects the Group's dedication to optimizing its operations, enhancing energy efficiency and integrating cleaner energy sources into its production processes. At the end of reporting year, 1.26% of reduction is achieved. For further details, please refer below to "Total GHG Emissions Progress against Targets" table. Through investments in advanced technologies, electrification and energy efficiency improvements, MOTOR OIL Group aims to significantly lower direct emissions from its refining, power and gas operations. Additionally, the Group is actively incorporating renewable energy solutions into its facilities and securing Renewable Energy Certificates (RECs) to support its transition to a low-carbon business model.

On a high-level approach, each initiative's contribution in scope 1 & 2 is presented below:

Scope 1 & 2 reduction targets (kMT), excluding power generation

The above figure presents the measures to be implemented in refinery against the target, which is the major contributor for scope 1 & 2 emissions. More info about the total baseline emissions and reporting year's progress are presented in E1-6.

Beyond direct emissions, MOTOR OIL Group recognizes the importance of addressing value chain emissions and has set a target to reduce Scope 3 emissions by 25% using 2021 as the baseline year. At the end of reporting year, -3.78% of reduction is achieved. For further details, please refer below to "Total GHG Emissions Progress against Targets" table. This objective reflects the Group's commitment to influencing and collaborating with its suppliers, partners and customers to drive systemic change across the industry. A key focus is on promoting lower-carbon products, expanding alternative fuel offerings and enhancing the efficiency of distribution networks. Additionally, the Group engages with its stakeholders to advance responsible sourcing practices and encourage carbon reduction strategies across the supply chain

MOTOR OIL Group actively involves its stakeholders in the process of setting climate mitigation targets through structured engagement activities, including surveys, bilateral meetings and dedicated focus groups. Baseline values against which the progress is measured is representative of the high emitting activities of MOTOR OIL Group, including refining and retail section.

This inclusive approach ensures that the Group's decarbonization goals - such as reducing Scope 1, 2 and 3 emissions by 2030 and achieving net-zero by 2050 - are aligned with stakeholder expectations, industry best practices and regulatory developments. Input from investors, employees, regulators, communities and supply chain partners helps shape realistic, impactful targets and fosters a sense of shared responsibility in advancing the Group's climate strategy.

	Target Year	Target
CO_2 Emissions Reduction (Scope 1 & 2)	2030	30% Reduction (base year 2021)
CO_2 Emissions Reduction (Scope 3)	2030	25% Reduction (base year 2021)
Net Zero Emissions (Scope 1,2,3)	2050	Net Zero
Energy Transition Investments	2030	€2.5 billion
Renewable Energy Operating Capacity	2030	>2.0 GW
MORE EBITDA Target	2030	> € 250 million
Group EBITDA from Non-Fossil Activities	2030	>40% of total EBITDA
EV Charging Points	2030	> 4,000 points

3.2.5 Policies and actions related to Energy [E1-2] [E1-3]

MOTOR OIL Group places energy efficiency at the heart of its sustainability and climate strategy, recognizing its critical role in reducing greenhouse gas (GHG) emissions, conserving natural resources and supporting the global transition to a low-carbon economy. Given the energy-intensive nature of the Group's operations - particularly in refining - responsible and sustainable energy use is a strategic priority.

The Group's management plays an active and leading role in driving energy performance initiatives, ensuring full alignment with the Energy and Environmental Policies, which are embedded within the broader Sustainability Policy. These policies form the foundation for the Group's Energy Strategy, which is structured around three core pillars:

1. Energy Efficiency and Optimization: All Groups' energy intensive activities operate under an Energy Management System certified with ISO 50001, which enables the systematic monitoring, evaluation and optimization of energy consumption across all operational areas. This includes setting measurable energy performance targets, identifying areas for improvement and integrating best available technologies to enhance efficiency.
2. Renewable Energy and Low-Carbon Transition: The Group is committed to expanding its renewable energy portfolio, investing in wind, solar and alternative fuel projects to reduce its reliance on fossil fuels.
3. Sustainable Energy Practices in Operations and Supply Chain: The Group actively encourages suppliers, business partners and regulatory bodies to promote sustainable energy practices across its value chain. By leveraging digital transformation and smart energy solutions, the Group ensures efficient resource utilization while minimizing energy-related risks.

Energy Management System (EnMS)

Central to the Group's energy performance is its Energy Management System, which governs the efficient use of energy across all facilities, with particular focus on refining operations. The EnMS is grounded in the principles of continuous improvement, enabling systematic monitoring, analysis and optimization of energy usage, while ensuring ongoing compliance with legal requirements and energy performance standards. As part of this commitment, the Group:

- Establishes and regularly reviews energy-related objectives and targets;
- Allocates the necessary resources and data to support improvement initiatives;
- Encourages the adoption of best practices and integration of technological advancements to enhance operational efficiency.

Procurement practices are aligned with energy performance goals, prioritizing energy-efficient products and services throughout all phases of operations - from design and construction to production and maintenance. Standardized practices across all facilities ensure consistent, measurable improvements in performance. The Group's Energy Management Policy reflects its dedication to Preserving natural resources, reducing greenhouse gas emissions and contributing to climate change mitigation through the responsible and efficient use of energy.

3.2.6 Targets related to Energy [E1-4]

As part of its commitment to energy transition and a more sustainable future, MOTOR OIL Group is continuously expanding its renewable energy portfolio. The Group has set a target to achieve a renewable energy capacity of 2 GW by 2030, reinforcing its role in the development of clean energy solutions. Through strategic investments in solar, wind and other renewable technologies, the Group aims to diversify its energy mix, reduce its carbon footprint and contribute to national and international climate goals.

In parallel, MOTOR OIL Group is advancing its biofuel production program, targeting 250 ktpa (kilotons per annum) as part of its ongoing efforts to provide sustainable fuel alternatives. By leveraging advanced biofuel technologies, the Group is actively reducing reliance on conventional fossil fuels while supporting the transportation sector's shift toward lower-carbon solutions. The integration of biofuels into the energy mix aligns with both regulatory frameworks and market demand for cleaner mobility options.

A key component of the Group's low-carbon strategy is the development of low-carbon hydrogen production, with a target of 60 ktpa by 2029. Hydrogen is expected to play a crucial role in the decarbonization of industrial processes and heavy transport, offering a viable pathway toward emissions reduction. MOTOR OIL Group is investing in cutting-edge technologies to produce hydrogen efficiently and sustainably, ensuring its role as a leading player in the emerging hydrogen economy.

Further expanding its portfolio of alternative fuels, the Group is actively investing in e-methanol production, targeting 25 ktpa by 2029. E-methanol, produced using renewable energy sources and carbon capture technologies, represents a key solution for reducing emissions in the maritime and industrial sectors. Additionally, the Group is strengthening its biodiesel production from biogenic feedstock, with a target of 200 ktpa, as part of its ongoing commitment to circular economy principles. By utilizing sustainable feedstocks such as waste oils and agricultural residues, the Group is enhancing resource efficiency while contributing to the reduction of greenhouse gas emissions. These efforts support the transition toward a more sustainable fuels market, ensuring compliance with evolving environmental regulations and reinforcing MOTOR OIL Group's leadership in responsible energy production.

3.3 Metrics

3.3.1 Energy consumption and mix [E1-5]

Energy consumption and mix (parent company & subsidiaries)		2023	2024
1	Fuel consumption from coal and coal products (MWh)	0	0,00
2	Fuel consumption from crude oil and petroleum products (MWh)	7,282,543.09	6,649,790.16
3	Fuel consumption from natural gas (MWh)	800,057.96	1,364,145.39
4	Fuel consumption from other fossil sources (MWh)	0.46	24.54
5	Consumption of purchased or acquired electricity, heat, steam and cooling from fossil sources (MWh)	156,683.08	149,718.10
6	Total fossil energy consumption (MWh) (calculated as the sum of lines 1 to 5)	8,239,284.59	8,163,678.00
Share of fossil sources in total energy consumption (%)		**99.00%**	**98.988%**
7	Consumption from nuclear sources (MWh)	0.00	212.13
Share of consumption from nuclear sources in total energy consumption (%)		**0%**	**0.003%**
8	Fuel consumption for renewable sources, including biomass (also comprising industrial and municipal waste of biologic origin, biogas, renewable hydrogen, etc.) (MWh)	15,329.55	20,279.73
9	Consumption of purchased or acquired electricity, heat, steam and cooling from renewable sources (MWh)	0	0
10	The consumption of self-generated non-fuel renewable energy (MWh)	2,121.97	1,863.67
11	Total renewable energy consumption (MWh) (calculated as the sum of lines8 to 10)	17,451.52	22,143.39
Share of renewable sources in total energy consumption (%)		**0.21%**	**0.27%**
Total energy consumption (MWh) (calculated as the sum of lines 6, 7 and 11)		**8,256,736.11**	**8,186,033.72**

Energy production from renewable sources in 2024 was equal to 1,725,394.636 MWh.

Accordingly, energy intensity per net revenue is calculated using total Group's net revenue (please refer to Note 4 of the Financial Statements 2024) and total energy consumption of MOTOR OIL's Group and is equal to 0.00067 MWh/euro, since the Group considers all sub-groups and their respective activities as high climate impact sectors according to Sections A to H and Section L of Annex I to Regulation (EC) No 1893/2006 of the European Parliament and of the Council (as defined in Commission Delegated Regulation (EU) 2022/1288).

Please note that 40.4% of the fossil electricity's value derives from renewable sources based on latest published data on suppliers' mix from DAPEEP (60,448.68 MWh).

Methodological approach

The Group's energy consumption framework is structured around multiple sources, considering national reporting standards and applicable regional data.

The total energy entering and consumed in the refinery is derived from three primary sources: (i) the import and consumption of fuels - either purchased or self-produced - classified as primary energy, (ii) electricity introduced from the national grid, converted into primary energy and (iii) fuel consumption for the Group's vehicle operations. For subsidiaries operating in Greece, energy consumption from nuclear sources is considered zero, in accordance with the National Inventory Report (Edition 2024). For subsidiaries in Cyprus, Bulgaria, Serbia, North Macedonia, Croatia and Romania, nuclear energy consumption is calculated using relevant and applicable data.

Refinery utilizes various fuel types, including:

Self-generated fuel oil.

Refinery fuel gas as mixture of self-generated fuel gas, LPG and natural gas.

Natural Gas as imported fuel source.

Energy consumption metrics of significant activities are externally validated every year in the context of ISO 50001:2018. For the reporting year, validation process is not yet completed.

MOTOR OIL refinery's energy consumption is also externally validated in the context of the EU ETS.

A portion of the fuel and imported electricity is further utilized for the internal generation of electricity, steam and compressed air, which support industrial processes and operational needs. Additionally, self-generated non-fuel renewable energy originates from renewable electricity production at CORAL's facilities, contributing to the Group's energy mix.

3.3.2 Gross Scopes 1, 2, 3 and Total GHG emissions [E1-6]

Total GHG Emissions (parent company & subsidiaries & associates)			
Retrospective			
Base year	**2023**	**2024**	**Change in%**
Scope 1 GHG emissions			
Gross Scope 1 GHG emissions (tCO_2eq)	2,081,878.80	2,118,793.96	2%
Percentage of Scope 1 GHG emissions from regulated emission trading schemes (%)	28.37%	29.88%	
Scope 2 GHG emissions			
Gross location-based Scope 2 GHG emissions (tCO_2eq)	86,415.70	78,054.81	-10%
Gross market-based Scope 2 GHG emissions (tCO_2eq)	69,494.19	50,433.08	-27%
Gross Scope 1 & 2 GHG emissions (tCO_2eq) (location - based)	2,168,294.51	2,196,848.77	1%
Significant scope 3 GHG emissions			
Total Gross indirect (Scope 3) GHG emissions (tCO_2eq)	47,590,766.39	50,548,171.49	6%
1 Purchased goods and services		7,756,609.59	
2 Capital goods		47,643.33	
3 Fuel and energy-related		1,143,124.24	
4 Activities (not included in Scope1 or Scope 2)		1,254,135.18	
5 Upstream transportation and distribution		7,959.31	
6 Waste generated in operations		786.72	
7 Business travelng		5,338.65	
8 Employee commuting		0.00	
9 Upstream leased assets		245,149.50	
10 Downstream transportation		191,997.72	
11 Processing of sold products		38,958,668.99	
12 Use of sold products		936,758.27	
Total GHG emissions			
Total GHG emissions (location-based) (tCO_2eq)	49,759,060.90	52,745,020.26	6%
Total GHG emissions (market-based) (tCO_2eq)	49,742,139.38	52,717,398.54	6%

On the table above, GHG Scope 1, 2 & 3 emissions are depicted for the reporting year, as well as the year before and comparison. Please note that GHG emissions from parent company, subsidiaries and associate companies are included.

GHG Scope 1 emissions analysis - FY 2024	MT CO_2eq
CO_2	2,111,725.53
CH_4	1,384,44
N_2O	5,096.42
HFCs	587.58
PFCs	0.00
SF_6	0.00
NF_3	0.00
Total	**2,118,793.96**

On the table above, GHG Scope 1 emissions per GHG are depicted for the reporting year. Please note that GHG emissions from parent company, subsidiaries and associate companies are included. Also, no biomass combustion takes place in Motor Oil's refinery.

Please note that HFCs emissions derive from maintenance of air-conditioning devices and refrigerants consumption, according to Regulation 573/2024/EU.

GHG emissions from associates only are:

Scope 1: 4,067.72 MT CO_2eq

Scope 2: 2,382.57 MT CO_2eq (location - based)

Scope 3: 2,057,194.94 MT CO_2eq

Total GHG Emissions progress against targets							
	Retrospective				Milestones		
Base Year	**2021 (Base Year)**	**2023**	**2024**	**% 2024 / 2023**	**2030**	**2050**	**Annual % Target / Base year**
Scope 1 GHG emissions							
Gross Scope 1 GHG emissions (tCO_2eq)	2,179,907.49	2,074,237.87	2,111,933.88	2%			
Scope 2 GHG emissions							
Gross location-based Scope 2 GHG emissions (tCO_2eq)	32,259.52	82,660.25	72,369.13	-12%			
Gross Scope 1 & 2 GHG emissions (tCO_2eq) (location - based)	2,212,167.01	2,156,898.12	2,184,302.51	1%	1,548,516.91	NZ	-1%
Significant scope 3 GHG emissions							
Total Gross indirect (Scope 3) GHG emissions (tCO_2eq)	46,144,869.00	45,378,385.59	47,888,826.66	6%	34,608,651.75	NZ	4%
Total GHG emissions							
Total GHG emissions (location-based) (tCO_2eq)	48,357,036.01	47,535,283.71	50,073,129.17	5%		NZ	

On the table above, GHG Emissions Scope 1, 2 & 3 are depicted, in comparison with the previous year as well as the GHG emissions of 2021 as the base year for setting reduction targets. Progress against reduction targets as well as projected reduction for years 2030 and 2050 according to Group's Transition Plan are also presented.

Please note that on this table, GHG emissions included represent the boundaries of base year 2021(For a detailed list of the entities included in the organisational boundaries, please refer to the sustainability report 2021).

Accordingly, GHG intensity of MOTOR OIL's Group for the reporting year is calculated using net revenue as well as total GHG emissions of MOTOR OIL Group, including parent company, subsidiaries and associates (also referenced in the relevant section of the financial statements, in euros (12,187,914,452)).

GHG intensity per net revenue	2023	2024	% 2024 / 2023
Total GHG emissions (location-based) per net revenue (tCO_2eq/Monetary unit)	0.00374	0.00433	**15.8%**
Total GHG emissions (market-based) per net revenue (tCO_2eq/Monetary unit)	0.00374	0.00432	**15.7%**

Methodological approach

MOTOR OIL's refinery CO_2 emissions calculations adhere to the EU-ETS methodology and are validated from external third party, as outlined in Regulation 2018/2066, in accordance with Directive 2003/87/EC and its subsequent amendments. Emission monitoring is conducted based on an approved Monitoring Plan, which details the applied methodology and is fully documented in a standardized electronic template published by EU CLIMA.

The Monitoring Plan includes:

- Compliance with uncertainty limits for the applied tiers, with uncertainty calculations for each source stream documented in the EU CLIMA uncertainty tool (Annex 4).
- A risk assessment framework designed to ensure control over emission monitoring procedures, documented in the EU CLIMA risk assessment tool.

For other Group installations and additional GHG gases, calculations align with methodologies, tools and fuel property data provided by the Hellenic Ministry of Environment and Energy, ensuring compliance with National Climate Law reporting obligations.

GHG emissions regulated by the EU ETS and total GHG emissions reported on this statement refer to the same reporting period.

Regarding Scope 2 GHG emissions:

- Location-based emissions are calculated using the latest Emission Factors (EF) provided by the National Inventory Report (Edition 2024) for installations and subsidiaries in Greece, while country-specific EF are applied for operations in Cyprus, Bulgaria, Serbia, North Macedonia, Croatia and Romania.
- Market-based emissions for Greek operations utilize EF data from the latest DAPEEP publication. Electricity for Group installations was primarily supplied by NRG, with PPC covering the remainder. Where multiple providers were used, emissions were calculated using a weighted mean approach.

The quantification of the other indirect emissions (Scope 3) of greenhouse gases (GHG) of the MOTOR OIL Group is carried out in accordance with the internationally recognized GHG Protocol and the ISO 14064-1:2018 standard, also taking into account the guidelines of the document "Estimating petroleum industry value chain (Scope 3) greenhouse gas emissions." Overview of methodologies" of IPIECA and API. The primary data for the corporate activities concerning Scope 3 emissions are collected for all the Group companies included in the ATH inventory and, if necessary, are processed to obtain the appropriate format (e.g. unit conversions). Then, the GHG emissions associated with each activity / emission source are calculated, applying appropriate emission factors from reliable sources.

Indicatively, the following is a list of sources of emission factors used during the GHG inventory (Scope 3) for the reference year 2024: Ecoinvent, Agribalyse, DEFRA / BEIS, EPA, Exiobase, Greece's National Inventory Report, IEA.

GHG accounting for MOTOR OIL Group's total emissions was held following GHG Protocol's guidance and most recent GWP values were used according to Sixth Assessment of IPCC (AR6).

Also, GHG emissions accounting boundaries include the parent company and its subsidiaries, as well as joint ventures and associates on which MOTOR OIL has operational control.

Lastly, no guarantees of origin were acquired during the reporting period.

3.3.3 GHG removals and GHG mitigation projects financed through carbon credits [E1-7]

Carbon removals and Carbon Credits

During the reporting period, MOTOR OIL Group did not engage in any GHG removal activities, nor did it finance any GHG mitigation projects through the use of carbon credits. Also, no carbon credits were purchased, sold, or transferred by MOTOR OIL Group during the reporting period.

Also, MOTOR OIL Group does not store any tonnes of CO_2 derived from carbon removal projects implemented within its own operations or across the upstream or downstream stages of its value chain.

However, as part of its commitment to achieving net-zero emissions across Scope 1, 2 and 3 and in line with the National Climate Law (including the target of a 30% reduction in Scope 1 & 2 emissions), the Group acknowledges that, should its targets not be fully met through decarbonization technologies within its energy production processes, it may pursue offsetting strategies.

These would include the use of the Group's own Natural Based Solutions (NBS) projects or high-integrity carbon credits, aligned with internationally recognized frameworks such as Article 6 of the Paris Agreement, the EU Carbon Removal Certification Framework (CRCF), or the National Voluntary Carbon Framework (once available) and any credits used would ensure transparency, additionality, permanence and methodological rigor.

4 POLLUTION [E2]

4.1 Impact, risk and opportunity management

4.1.1 Policies and Actions related to Pollution [E2-1] [E2-2]

MOTOR OIL Group has adopted and implements an Environmental Policy that includes environmental provisions, obligatory for all employees and covering own operations, under the scope of ISO 14001 certification schemes. The Policy seeks to promote environmental sensitivity and accountability, both by Management and employees and requires not only compliance with applicable legislation but, where possible, go beyond compliance requirements. The framework was established to manage and control pollution, aims to minimize emissions to air, water and soil, ensuring compliance with environmental regulations in the regions where the Group operates. It also aims to mitigate negative impacts related to air and water pollution. Pollutants under scope are defined on each installation's Environmental Terms. This framework forms an integral part of the Group's Sustainability Policy where environmental protection is fundamental factor for a long-term, responsible and successful business strategy. With respect to Environment, MOTOR OIL Group is committed to:

- Set objectives, which are compatible with its strategic orientation and accomplish a continuous improvement of its environmental performance.
- Follow industry trends and adopt new technology for the optimization of its activities.
- Meet or exceed legal and other requirements in respect to its assets and society's needs.
- Make all efforts to minimize its environmental impact, including pollution prevention, improving the quality and the treatment of waste, discharges and emissions.
- Report its performance, good or bad, in the context of corporate social responsibility.
- Integrate Environmental considerations into all business decisions, plans, processes and operations in the framework of the Integrated Management System.
- Provide consultation, information and training to employees, contractors and suppliers working to ensure their commitment to environmental protection and awareness.

Sustainability Committee is responsible for the supervision of the implementation of environmental management and ensures that measures to control emissions are effectively integrated into daily operations. The development and periodic review of the policy takes into consideration the interests of key stakeholders, including regulatory authorities, local communities and industry partners to promote transparency and accountability. The Policy is publicly available on Motor Oil's website and through annual Environmental Statements.

MOTOR OIL Group publicly discloses its environmental management performance, beyond Sustainability Statement, through annual reports to competent authorities and EMAS environmental statements.

Air Pollution: Refinery activities

MOTOR OIL Group is committed to compliance with all applicable environmental laws and regulations, ensuring the effective monitoring, control and reduction of emissions across its industrial operations. It has established Key Performance Indicators to track the effectiveness of its air pollution control policies and ensure alignment with regulatory requirements and best practices. The targets focus on emission reductions, pollution prevention and resource management to minimize environmental impact.

MOTOR OIL Group aiming at improving air quality according to its environmental policy and the latest Environmental Permit, implements where available the Best Available Techniques (BATs) during the operation of its facilities that directly contribute to the control of air pollutants and their specific loads. During the reporting period, usual maintenance actions took place when it comes to the equipment used, therefore not contributing substantially to Group's OpEx or CapEx.

The application of BAT (Implementing Decision 2014/738/EU) related to air pollution at the refinery includes measures to prevent or reduce emissions during the facilities operation:

- Incorporation of BATs either into the design of a new unit or when existing units and processes are expanded or modified.
- Electrostatic filter (ESP) operation at the Fluid Catalytic Cracking Unit (FCCU), intended to reduce emissions of suspended particles deriving from catalyst.
- Reduction and control of hydrocarbon fugitive emissions by efficient measures and equipment, such as closed circuits in gas processing operations, routing of gases from safety valves to flares, secondary seals in floating roof tanks, floating covers in oil separators and a Vapor Recovery Unit (VRU) in the truck loading terminal. Additionally, a new vapor recovery unit, at the port facility area, is currently at the design phase.
- Maximization of natural gas usage, in the refinery fuel mixture.
- Automations and control systems that contribute to the efficient management of raw materials and energy, while supporting to maintain high levels of reliability and safety
- Performance control of furnaces and boilers.
- Continuous monitoring of main pollutants (SO_2, NOX, PM, CO) in large combustion plants including power plant and the fluid catalytic cracking unit and periodic monitoring of main pollutants (SO_2, NOx, PM, CO) in every other stack of the refinery by an accredited third party.
- Implementation of a leak detection and repair program (LDAR) to limit fugitive emissions from the equipment, using both sniffing and optical methods.

Integrated sulfur management system: The challenge refineries face is that the amount of sulfur in the available crude oil types increases over time, while the specifications for allowable sulfur content in the fuels produced have been reduced. To counteract this challenge and through its Hydrocracker Complex, MOTOR OIL delivers petrol and automotive diesel with a sulfur content below 10 ppm, whilst minimizing sulfur emissions. Moreover, the maximum acceptable level of sulfur emissions is low (<600 kg/h) and the air quality concentration of sulfur dioxide, on an hourly basis, should not exceed 350 $\mu g/m^3$. In this context, the removal of sulfur coming into the refinery with crude oil -at a concentration which in 2024 ranged between 2.1% and 2.8%- is a significant challenge. The challenge is addressed by desulfurization of gases used as fuel in the refinery before they enter the gas fuel system, reducing emissions of sulfur dioxide and the operation of sulfur recovery units for converting hydrogen sulfide deriving from process into solid sulfur. Elemental sulfur is initially produced in liquid form, which by cooling and appropriate processing, is converted to a solid granular form, stored in silos for sale as a raw material.

To maintain high environmental standards, Refinery operates Air Quality Monitoring Network consisting of a dedicated monitoring station near its port premises, measuring a wide range of pollutants, including hydrogen sulfide (H_2S), sulfur dioxide (SO_2), particulate matter (PM10, $PM_{2.5}$), nitrogen oxides (NO, NO_2, NOx), methane (CH_4), non-methane hydrocarbons (NMHC), total hydrocarbons (THC), benzene (C_6H_6) and carbon monoxide (CO). The network also records key meteorological parameters such as wind direction and speed, air temperature and relative humidity. Additionally, three dedicated measuring stations specifically track hydrogen sulfide (H_2S) and sulfur dioxide (SO_2), with two positioned around the refinery's perimeter and one located in Agioi Theodoroi, ensuring comprehensive air quality oversight.

Finally, to align with a new global cap on marine fuel oils that came in force since start of 2020, having as a scope to reduce the air pollution coming from the shipping industry, refinery adapted its operational parameter and crude diet to produce this low sulfur fuel oil (0.5%) since the beginning of 2021.

Water Pollution: Refinery activities

Due to nature of activities, there are not specific targets for effluent discharges from operational sites. The deployment of BAT Techniques and ISO 14001 management system support the legal compliance with subjected environmental terms.

As part of its broader Sustainability Policy, the Group's water pollution prevention strategy incorporates wastewater treatment, operational controls and preventive maintenance programs to minimize environmental impact while maintaining industrial efficiency. These measures apply across all operating sites when pollutants direct to seawater or municipal sewages.

A core component of MOTOR OIL Group's environmental management is the effective treatment of wastewater generated during refinery operations. Due to their different pollutant load, the industrial and sanitary wastewater streams undergo different types of processing prior to their final disposal. For the industrial waste, the treatment process consists of advanced treatment technologies, including effective treatment stages (API type oil separators, Dissolved Air Flotation (DAF), sand filters, biofilters, sludge treatment) incorporating the Best Available Techniques. The effective operation of the Industrial Wastewater Treatment Plant is evidenced by the fact that concentrations of various pollutant at the plant outlet are below relevant limit values as defined by Environmental Terms which they follow BAT -AEL limits (Implementing Decision 2014/738/EU). As a rule, depending on its origin and the nature of the contaminants present (e.g. sulfur compounds, phenols, alkalinity, ammonia), wastewater are pre-treated in intermediate units or directly in the refinery's Industrial Wastewater Treatment Plant. In terms of intermediate treatment, the main three units responsible for processing of wastewater are the Sour Water Stripper unit, the Spent Caustic Neutralisation unit and the Neutralisation unit treating acidic effluents from the alkylation unit.

The sanitary waste treatment process consists of three treatment steps:

- Primary treatment (screening, precipitation, flow balancing)
- Secondary treatment (biological active sludge treatment, clarification)
- Tertiary treatment (nitrification/denitrification, chlorination)

Routine assessments and audits ensure that wastewater treatment processes remain efficient and compliant with environmental standards. To further mitigate water contamination risks, the Group enforces operational controls at all industrial sites. Sealed drainage systems and containment basins are in place to prevent accidental spills from entering local water bodies.

Preventive maintenance is another key element of MOTOR OIL Group's strategy. The company conducts regular inspections of pipelines, storage tanks and wastewater treatment units to identify and resolve potential failures before they result in environmental damage.

Water Pollution: Retail activities

At CORAL, a water management approach was implemented, redesigning the wastewater drainage system at the Ag. Theodoroi oil terminal to separate stormwater from wastewater before treatment. This initiative prevents contamination of local water sources, directly addressing community concerns over industrial effluents.

Circular Economy & Alternative Fuels activities

PRASINO LADI is dedicated to minimizing its environmental footprint and promoting sustainability throughout its operations. One of key initiatives is the collection and responsible management of used cooking oils. PRASINO LADI understands the detrimental effects that improper disposal of these oils can have on the environment.

To mitigate impacts caused in terms of pollution, PRASINO LADI diligently collects used cooking oils and forward them to VERD for proper processing and recycling. By doing so, it doesn't only prevent the oils from harming the environment but also contribute to the production of biodiesel. Biodiesel is a renewable and cleaner alternative to conventional fuels, helping to reduce greenhouse gas emissions and reliance on fossil fuels.

In VERD production plant there is thorough monitoring of air emissions from the burners daily, to support meeting compliance with environmental terms. In one of the two steam producing burners, the fuel is a production by-product (Bio-Heating Agent (BHA)) which is a low sulfur (<0.1%) fuel while its carbon footprint is very low, minimizing the use of fossil fuel oil and the subsequent effect on the emissions. Furthermore, scrubber systems prevent methanol emissions, while biofilters manage odors resulting from the processing of used vegetable oils and animal fats. These integrated measures reflect a holistic approach to environmental stewardship.

As part of the Group's circular economy and alternative fuels activities, measures have been implemented to minimize environmental impact during production. These initiatives apply specifically to operations involving lubricants and biofuel production using of vegetable oils, animal fats, where water pollution risks are carefully managed.

At the production and storage stages, a sealed system of safety basins and an oil separation unit prevent the discharge of substances into the sewage network. This infrastructure ensures that any potential leaks or spills are contained and do not pose a threat to surrounding water bodies. The facilities which operate within an industrial zone equipped with a sewage network, are connecting to a municipal waste treatment unit. Compliance with wastewater discharge standards is monitored according to environmental permit conditions, ensuring that water pollution risks are mitigated.

RES activities

The Group's commitment to water pollution prevention in RES aligns with its overall environmental strategy, ensuring that all energy projects, including both conventional and renewable sources, adhere to high sustainability standards.

4.1.2 Targets related to Pollution [E2-3]

Regarding air and water emissions, the MOTOR OIL Group has not established measurable or results-oriented targets. The relevant business operations in these areas are subject to regulations that define the permissible limits and specify the technologies to be employed. These regulatory requirements set specific environmental performance obligations that the Group must adhere to, ensuring alignment with legislative standards for pollution control and mitigation.

MOTOR OIL Group remains committed to sustainable industrial practices, regulatory compliance and proactive stakeholder collaboration. By prioritizing water resource protection in all its operations, the Group sets a high standard for environmental responsibility in the energy and refining industry.

4.2 Metrics

4.2.1 Pollution of air [E2-4]

Description	Unit	2024
Non-methane volatile organic compounds (NMVOC)	MT	354.393
Nitrogen oxides (NO x /NO_2)	MT	1,780.167
Sulphur oxides (SO x /SO_2)	MT	2,307.685
Particulate matter (PM_{10})	MT	91.485

4.2.2 Pollution of water [E2-4]

Description	Unit	2024
TOC (as COD/3)	MT	140.446
Total Nitrogen	MT	76.586
Phenols	MT	1.035

Methodological approach

The refinery's approach to environmental monitoring has evolved over time, driven by technological advancements, operational improvements and environmental measures. Continuous enhancements in monitoring systems ensure compliance with regulatory requirements while minimizing the environmental footprint of operations. By integrating advanced technologies and refining internal procedures, the refinery maintains high standards of environmental responsibility.

Effluent monitoring involves multiple layers of analysis to safeguard water resources. According to environmental term's frequency, sampling is conducted in accordance with EN standards as defined in Decision 2014/738/EU, to evaluate water quality and detect any deviations from regulatory thresholds. The analysis is performed by MOTOR OIL's accredited laboratory or equivalent third party.

To maintain regulatory compliance and uphold environmental performance, the refinery follows a systematic approach to data management. This process involves the collection, verification and processing of environmental data to ensure accuracy and reliability. The integration of automated monitoring technologies further strengthens the ability to track key environmental parameters in real time.

The final step in the refinery's environmental monitoring process is reporting. These reports serve as a vital tool for regulatory authorities, stakeholders and internal management, demonstrating the refinery's commitment to environmental sustainability and continuous improvement. The emissions to air and water reported are based on continuous measurements where available and to calculations derived from international bibliography.

The KPI's presented are the pollutant emissions to air and water from refinery and subsidiaries (LPC, CORAL GAS, VERD) subject to European Pollutant Release and Transfer Register Regulation 166/2006/EU that exceed the legislative threshold (Annex I of Regulation). They are based on continuous measurements and calculations. Emission factors used for the calculations of air pollutants, derive from Concawe's report no. 4.19 "Air pollutant emission estimation methods for E-PRTR reporting by refineries". Calibration of automated systems for air pollutants is conducted as stated in Environmental Terms. Water pollutants' calculation was based on average/year concentration and effluents discharge flow measured. Metrics are externally validated by third party on annual basis under Eco Management and Audit Scheme (EMAS). Air emissions of CH_4 and N_2O (eligible under Regulation 166/2006/EU) are disclosed in ESRS E1 metrics.

5 Water and Marine Resources [E3]

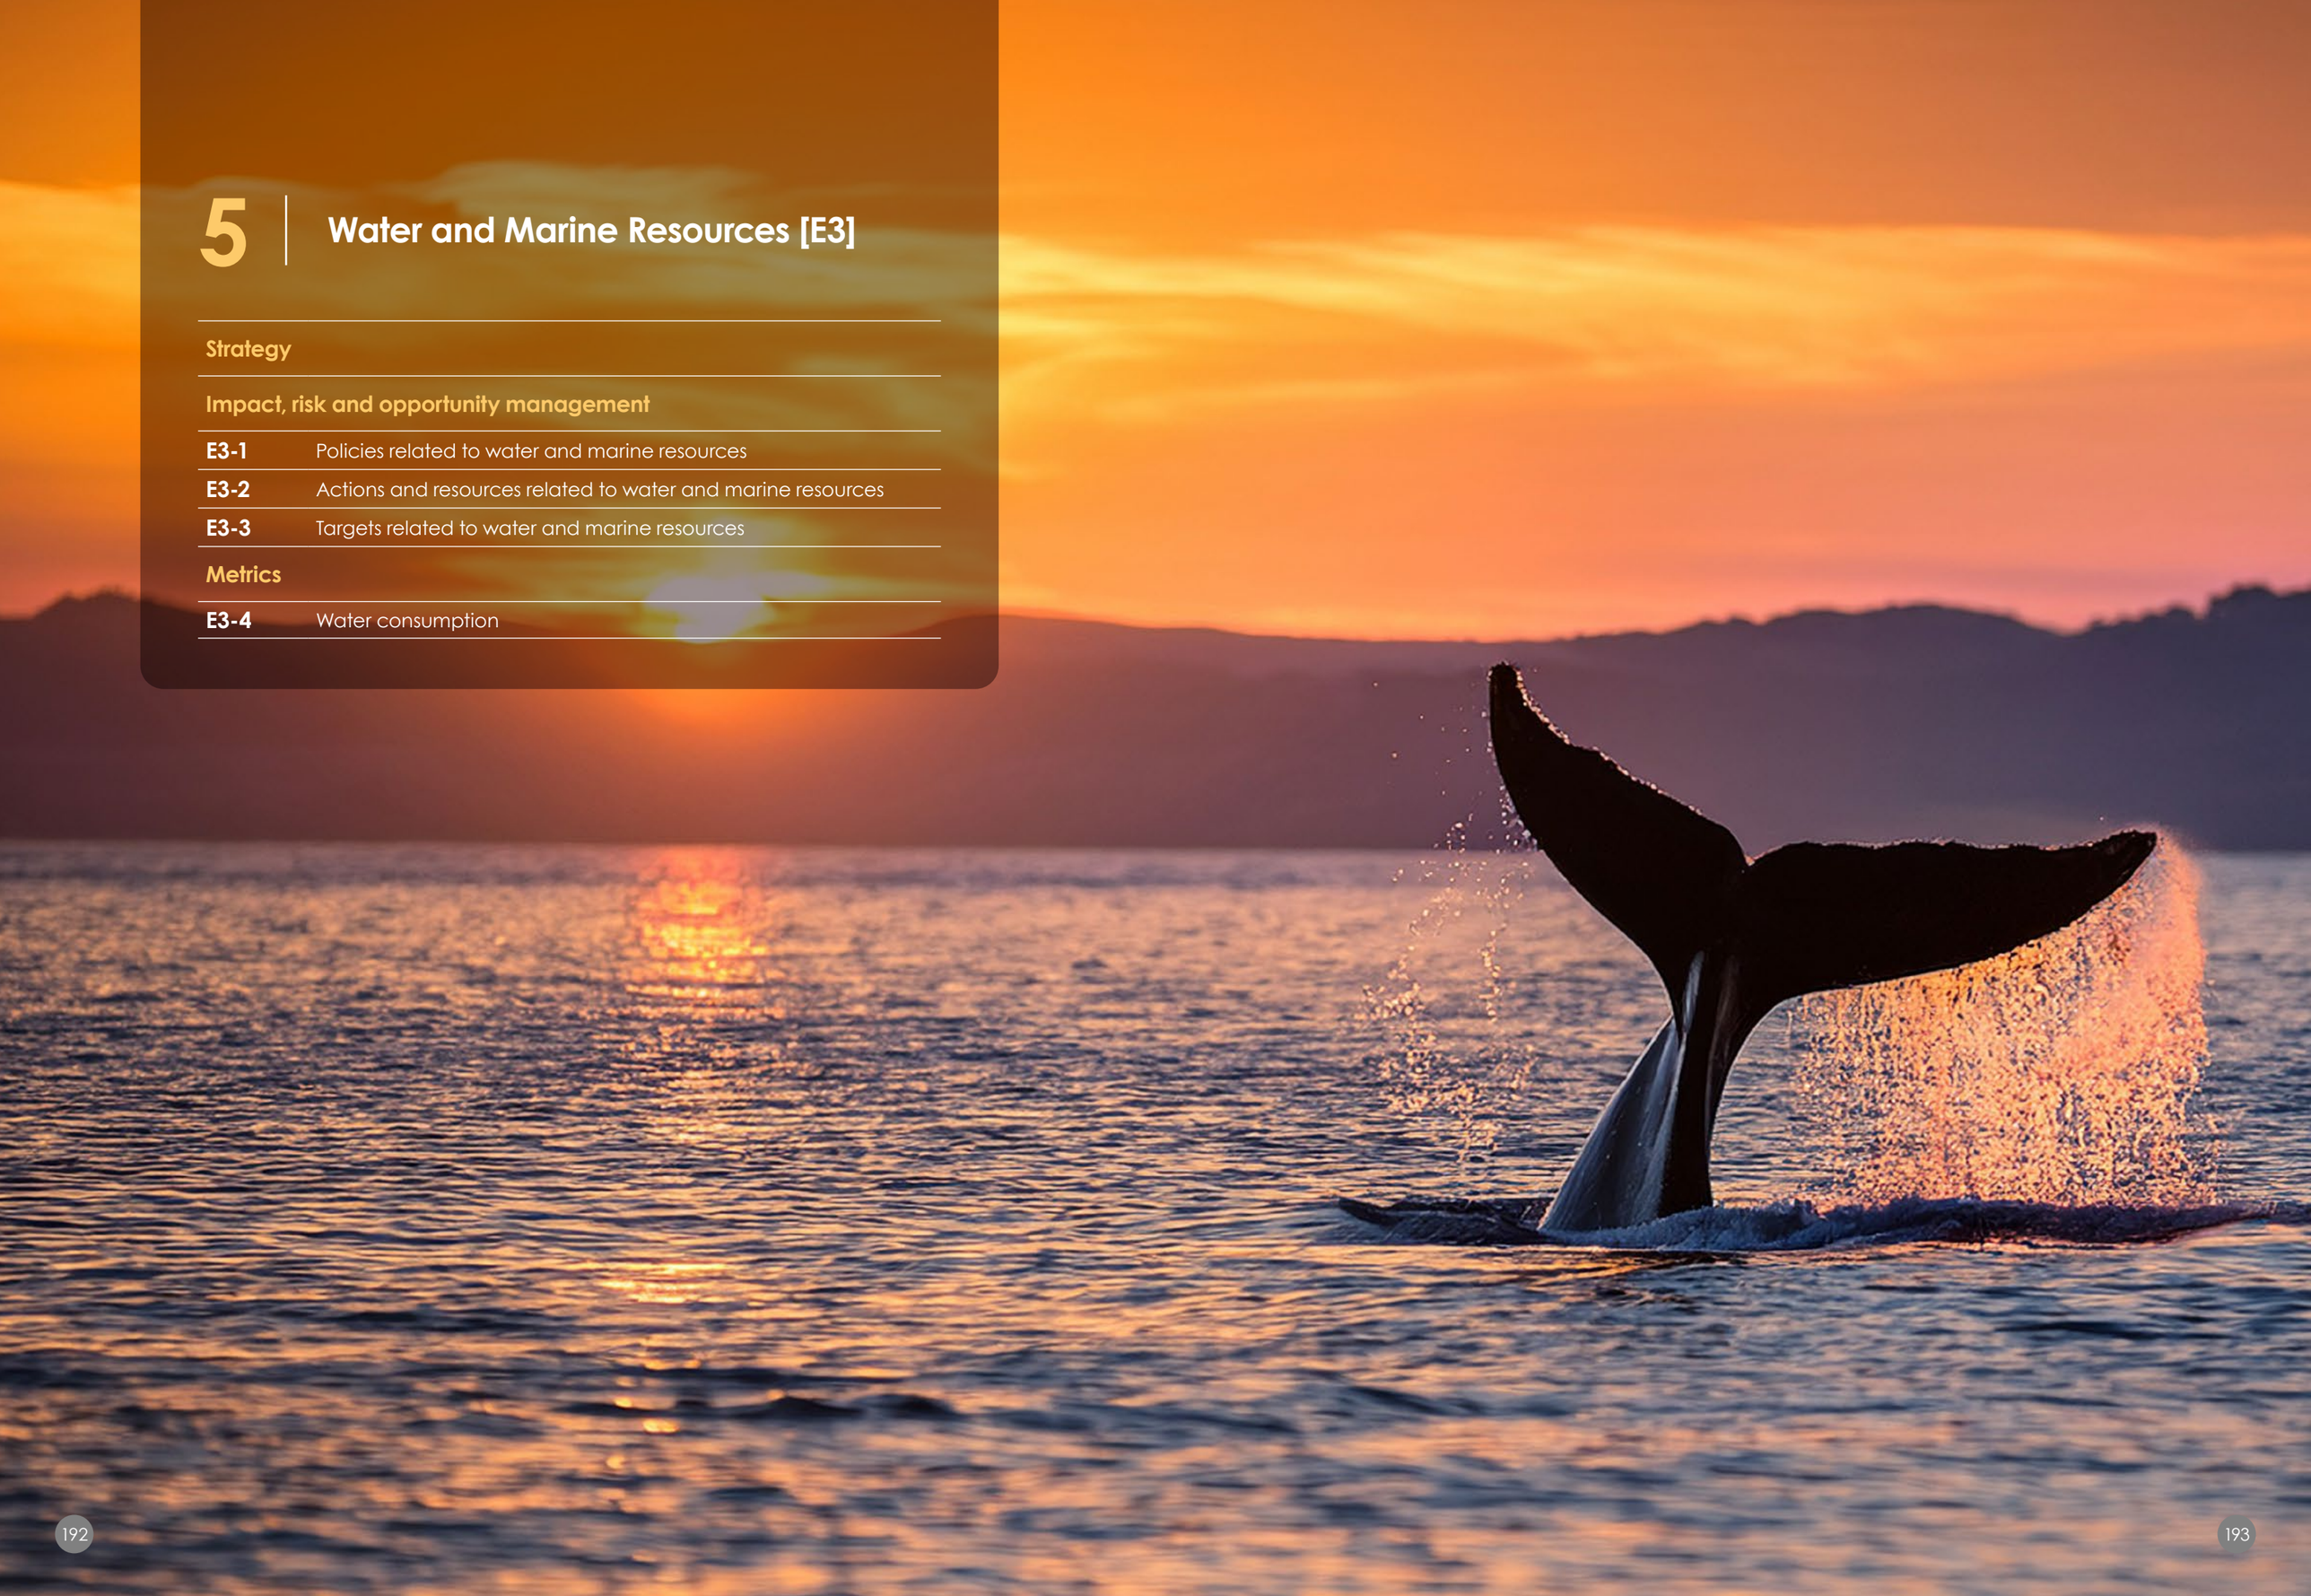

Strategy

Impact, risk and opportunity management

E3-1	Policies related to water and marine resources
E3-2	Actions and resources related to water and marine resources
E3-3	Targets related to water and marine resources

Metrics

E3-4	Water consumption

5 WATER AND MARINE RESOURCES [E3]

5.1 Impact, risk and opportunity management

5.1.1 Policies and actions related to water and marine resources [E3-1] [E3-2]

MOTOR OIL Group has implemented a comprehensive set of environmental policies and operational protocols that govern the sustainable use, management and protection of water and marine resources across its value chain. While the Group has not yet adopted a standalone water and marine resources policy, these topics are fully embedded within the Group's ISO 14001-certified Environmental Management Systems (EMS) and aligned with applicable EU and national environmental legislation.

The Group's policies are shaped by compliance with the EU Industrial Emissions Directive (2010/75/EU), the Water Framework Directive (2000/60/EC) and relevant permitting requirements across jurisdictions. They apply to all water-intensive operations - including refining, energy generation, waste management and environmental services - and are designed to ensure responsible sourcing, treatment, reuse and discharge of water, while protecting surrounding ecosystems, particularly marine and coastal environments near port operations.

The Group's strategic objective is to ensure the sustainable management and protection of water resources, in line with relevant EU directives (2000/60/EU), national legislation and voluntary disclosure frameworks such as GRI 303 and CDP Water. This includes improving water efficiency, minimizing pollution risks, reducing dependence on freshwater sources and enhancing resilience to climate-related water risks such as flooding, drought and sea level rise.

Recognizing evolving expectations under the Corporate Sustainability Reporting Directive (CSRD) and the European Sustainability Reporting Standards (ESRS), MOTOR OIL Group is committed to:

- Developing a formal water and marine transition plan, consolidating current actions and establishing quantifiable objectives and timelines.
- Aligning with the Taskforce on Nature-related Financial Disclosures (TNFD) and future science-based target frameworks for freshwater.
- Exploring collaborative water governance models, especially in water-stressed areas or where shared resource use with communities and ecosystems is material.

Refinery, Supply and Trading activities

MOTOR OIL Group's environmental policies governing water and marine resources are most advanced and deeply embedded within its refining operations, particularly at the Corinth Refinery, the Group's largest industrial site. These policies are grounded in compliance with EU and national environmental regulations, including the Industrial Emissions Directive (2010/75/EU) and the Water Framework Directive (2000/60/EC – national law 3199/2003) and are implemented through a robust ISO 14001-certified Environmental Management System (EMS).

Recognizing the refinery's substantial water needs, the Group has taken decisive steps to enhance water efficiency and reduce environmental pressure. A central pillar of this effort is the facility's dedicated desalination unit, which now supplies 100% of the refinery's freshwater needs, completely eliminating dependence on freshwater resources. This shift not only safeguards local water reserves but also underscores the Group's commitment to long-term resource conservation and operational resilience.

The Group's water management actions at the refinery extend well beyond sourcing. It includes advanced wastewater treatment systems that ensure all industrial and sanitary effluents are processed to meet or exceed strict environmental standards before being discharged.

The closed drainage network channels all effluents to the Industrial Wastewater Treatment Plant (IWWTP) and to sanitary plant, ensuring that discharges into the marine environment are controlled, treated and compliant.

The refinery also conducts periodical coastal water monitoring to assess potential impacts on marine biodiversity. This goes beyond regulatory compliance and reflects a commitment to preserving local ecosystems through scientific monitoring, adaptive management and continuous improvement.

Key refinery's water management related actions include:

- Reuse of acidic process water in the crude oil desalination phase, reducing both consumption and waste.
- Closed-loop cooling systems in new processing units minimize water usage while maintaining operational efficiency.
- Periodical monitoring of marine water quality, recording changes in physical parameters - an approach aligned with the EU Water Framework Directive.
- Integration of industrial and sanitary wastewater treatment, ensuring safe discharge and environmental protection.

Please note that no significant financial resources were allocated to these actions during reporting period. In addition, the Group actively participates in international marine protection efforts, including collaboration with oil spill response organization. Measures such as vessel deballasting protocols, enclosed wastewater systems and separating oily and non-oily waste are embedded into operational practices to mitigate pollution risks.

Retail activities

Within the Retail and Fuels Marketing segment, MOTOR OIL Group applies a risk-based, proportionate approach to water and marine resource management, recognizing that water consumption in this business line is relatively low. Although no material water-related risks have been identified in the Group's retail operations - given their focus on fuel distribution, storage and consumer services - site-level procedures ensure that wastewater handling, drainage and spill prevention are well managed and aligned with regulatory expectations.

Key priorities include:

- Compliance with wastewater discharge regulations at service stations, terminals and depots, particularly where activities such as vehicle washing or fuel handling may pose local water pollution risks.
- Oil-water separation systems, drainage network controls and containment bunds at fuel terminals and storage facilities.
- Integration of marine and water sustainability measures into operational frameworks such as Shell's HSSE MS (Health, Safety, Security and Environment Management System), which provides structured environmental controls for Shell-branded activities under the Group.

Specific improvements demonstrate the Group's commitment to continuous improvement in this area:

- At CORAL, targeted infrastructure upgrades are underway, including the redesign of the drainage system at the Ag. Theodoroi oil terminal and the installation of new lining systems at the Alexandroupolis terminal's bunded tank farm area. These enhancements aim to reduce contamination risks and ensure safe waste handling in high-traffic, high-risk fuel storage zones.
- CORAL GAS supports these efforts with systematic water consumption monitoring, helping to optimize water use even in low-intensity operations.
- Across all retail sites, staff are trained in spill prevention, emergency response protocols and wastewater management, ensuring that local-level environmental protection measures are consistently applied.

Power & Gas activities

In the Power and Gas segment, MOTOR OIL Group applies a precautionary and forward-looking approach to water management, recognizing the role water can play in cooling, auxiliary processes and environmental compliance - particularly in thermal power generation.

A prime example of the Group's evolving water management in this area is the THERMOILEKTRIKI KOMOTINIS power plant, currently in its commissioning phase. As part of its early operational readiness strategy, THERMOILEKTRIKI is conducting systematic recording of water inflows and outflows to establish a robust baseline for water use efficiency and discharge management once the plant becomes fully operational. This data will inform future targets, and infrastructure needs while supporting compliance with environmental permitting obligations.

Circular Economy & Alternative Fuel Activities

While water usage in these activities is generally lower compared to refining or energy production, the Group remains committed to optimizing water use, minimizing wastewater generation and integrating sustainable practices across operations. These principles are reflected in the environmental management frameworks and day-to-day processes of several key subsidiaries, including LPC, PRASINO LADI, VERD and THALIS Environmental Services.

At LPC, the company addresses water consumption challenges through targeted monitoring and efficiency planning. A specific key performance indicator (KPI) - water consumption per metric ton of raw material processed - is used to evaluate effectiveness and guide decision-making. In addition to tracking usage, LPC also recycles a portion of its wastewater, reducing net consumption and supporting circular resource use within its production cycle.

PRASINO LADI, emphasizes continuous evaluation of water use as part of its operational routine. This monitoring allows for ongoing improvements in both efficiency and conservation, helping to reduce environmental impact while maintaining production quality. The company's commitment to responsible water use is embedded in its broader goal of advancing sustainable fuel alternatives.

At VERD, water stewardship is tightly integrated into the company's production processes. A dedicated water recovery unit, which includes distillation for volatile organic compound (VOC) removal, enables the reuse of processed water within the facility. This system not only reduces water withdrawals but also minimizes wastewater discharge volumes - contributing meaningfully to the Group's overarching commitment to circularity and environmental performance.

THALIS Environmental Services, while not yet operating under a formal, standalone water management policy, adheres to an ISO 14001-certified Environmental Management System. Through this system, THALIS systematically records water consumption across both office and operational sites. This structured monitoring ensures that even lower-intensity water users contribute to the Group's broader sustainability goals by applying efficient and responsible resource use practices.

RES activities

MORE's core focus lies in the development and operation of solar, wind and other renewable energy assets, which typically involve low-intensity water use.

Water and marine resource considerations are incorporated into site selection, permitting and operational planning. This includes ensuring soil and land stability to reduce the risk of runoff and erosion, especially in sloped or sensitive terrains. For large-scale solar installations, attention is given to stormwater management infrastructure to prevent local flooding and protect adjacent land and water systems.

In wind and solar project development, the Group takes deliberate measures to avoid sensitive aquatic ecosystems, such as wetlands, riparian zones and protected habitats, ensuring that projects are designed and implemented in a manner that aligns with both regulatory expectations and biodiversity conservation principles.

5.1.2 Targets related to water and marine resources [E3-3]

While quantified, time-bound water and marine resource targets are not yet in place, the Group is actively advancing toward their definition by building the necessary data infrastructure, operational benchmarks and governance processes. Next year, MOTOR OIL Group will enter into a target-setting phase, during which site-specific and activity-based water targets will be formally developed. These targets will address key performance areas such as water use efficiency, recycling and reuse and discharge quality, tailored to the operational context of each business segment. In parallel, the Group will begin to assess the applicability of science-based target methodologies for freshwater, incorporating them where relevant and as global standards continue to mature.

The Group continues to track the effectiveness of its water related actions and intends to further strengthen the process.

Looking ahead, the Group has identified a number of forward-looking priorities to support a structured water transition pathway. These include:

- Upgrading monitoring infrastructure and data reliability across all sites by 2025.
- Standardizing water accounting and integrating recently acquired waste management businesses (e.g., THALIS).
- Expanding internal verification and exploring third-party assurance of water data.
- Developing performance indicators such as water intensity metrics and recycling rates, with the aim of evaluating formal target-setting by 2026.
- Reduction in freshwater dependency from the operation of the desalination unit by continuing enhancement of circular water use.

5.2 Metrics

5.2.1 Water consumption [E3-4]

Description	Unit	2024
Total water consumption	m^3	657,286
Total water discharge	m^3	3,927,706
Total water withdrawal	m^3	4,584,992
Total water consumption in areas at water risk, including areas of high-water stress	m^3	68,793
Water intensity ratio	m^3/million €	53.93

Water withdrawal as well as discharges for production and storage facilities, is directly measured (flow meters for refinery and invoices from supplier for all other entities). For MOTOR OIL's refinery and LPC, water management related metrics are externally validated through Eco Management and Audit Scheme (EMAS), while refinery's metrics are also validated under EU ETS reporting purposes (ALC report). For reporting purposes, consumption is considered as the difference between water withdrawal and discharge. Water storage at the end of the reporting year is considered to be zero, as all quantities are included in withdrawal/discharge metrics. Recycled/reused water is not possible to be directly measured.

Total water consumption in areas at water risk, including areas of high-water stress is considered as the water consumption coming from all other facilities and installations except MOTOR OIL's refinery.

6 BIODIVERSITY AND ECOSYSTEMS [E4]

6.1 Strategy

6.1.1 Transition Plan and Consideration of Biodiversity and Ecosystems in Strategy and Business Model [E4-1]

MOTOR OIL Group's transformation strategy into a diversified multi-energy and circular economy leader involves a wide range of activities that interact with nature and biodiversity.

MOTOR OIL Group's transition plan includes an ongoing evaluation of biodiversity-related risks and dependencies across Group's value chain. The Group is systematically reviewing its policies to incorporate measurable biodiversity objectives and integrating international best practices into operational planning and execution.

Informed by the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES), MOTOR OIL Group's biodiversity strategy addresses both direct and indirect drivers of biodiversity loss, including land-use change, climate change, invasive species, pollution and economic incentives. MOTOR OIL Group's approach is built on continuous monitoring, adaptive management and investment in nature-based solutions - such as using native plant species for reforestation, promoting agroforestry and advancing regenerative agriculture practices.

The biodiversity plan covers activities across renewable energy development, biofuels and e-fuels production, carbon capture and low-carbon hydrogen, circular economy and waste management, land stewardship, infrastructure expansion.

The Group is also embedding biodiversity dependencies and risk assessments into its climate resilience planning, ensuring that nature conservation efforts are fully integrated into the broader climate strategy. Group's methodology draws on global frameworks and science-based approaches, including those of the IPCC (Intergovernmental Panel on Climate Change) and the IEA (International Energy Agency), to align biodiversity action with climate mitigation and adaptation goals.

Another central component of the strategy is the Group's Forest Program, which supports biodiversity and climate goals through the following key initiatives:

1. Collection, processing and storage of forest seeds through its ginning plant to support reforestation and ecological restoration.
2. Forestry nurseries for the propagation of native species to be used in reforestation and rehabilitation projects.
3. Afforestation and reforestation initiatives aimed restoring degraded ecosystems in Groups business activities.
4. Forest protection, preservation and conservation aiming at preventing both planned and unplanned deforestation and degradation.
5. Revegetation and soil restoration to support ecosystem recovery and improve biodiversity in impacted landscapes. (Evaluated)
6. Implementation of regenerative agriculture and sustainable land management to enhance biodiversity, soil quality and landscape resilience. (Evaluated)

A further cornerstone of MOTOR OIL Group's transition plan is active participation in EU and national co-funded programs that align with its biodiversity and sustainability objectives. These include projects focused on biodiversity restoration, renewable energy expansion and reforestation, all aimed at improving ecosystem resilience and natural capital.

6.1.2 Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model [SBM-3]

The establishment of refineries, storage facilities and transport infrastructure such as pipelines may lead to, altering critical wildlife habitats and reducing biodiversity by converting natural areas into industrial zones. This underscores the importance of a structured environmental management approach (Ecological Assessment through Environmental Impact Assessment) that integrates biodiversity risk assessments into project planning and operations. Given the potential severity of pollution incidents, comprehensive spill prevention and response planning are critical in mitigating ecological disruptions.

Managing RES infrastructures and other assets located in protected or high biodiversity areas poses a notable risk to biodiversity. During both the setup and operational phases of renewable energy activities, there is a risk of negative impacts on particular species and the area's overall biodiversity richness and/or abundance. Recognizing this, MORE ensures that all renewable energy projects comply with Greek legislation and undergo environmental assessments before construction and operation. While renewable energy developments aim to produce green energy, their placement in protected areas requires careful planning to prevent adverse effects.

Any potential oil spills and other incidents with significant impacts, including damage to marine and terrestrial ecosystems, are generally recognized as risks for the Oil & Gas Industry.

No parts of the refinery operate in natural habitats or protected areas that might be affected by Group's activities. MOTOR OIL Group's operations are conducted within designated industrial zones, with strict environmental controls in place to prevent biodiversity impacts. Nonetheless, given the industry's reliance on marine and terrestrial ecosystems, the Group actively engages in biodiversity protection measures. MOTOR OIL Group's commitment extends beyond refinery operations to renewable energy projects, retail fuel networks and marine transport activities. In this way, the Group integrates biodiversity considerations across its entire operations, ensuring that both mitigation and restoration efforts contribute to long-term environmental sustainability. The Group's subsidiaries operating in fuels retail, including CORAL and AVIN, follow similar environmental management principles. This cross-sectoral approach ensures that MOTOR OIL Group's sustainability initiatives remain consistent, whether in mitigating risks from oil spills or enhancing ecosystem resilience through reforestation efforts.

Forest programs that include nurseries and reforestation efforts, along with ginning plants, positively impact ecosystems by restoring habitats and biodiversity and enhancing carbon sequestration. These initiatives align with Group's broader commitment to biodiversity protection, reinforcing its structured approach to environmental risk management.

Risks

Land degradation caused by industrial infrastructure development presents material financial risks, including costly environmental restoration, regulatory penalties and reputational damage among environmentally conscious stakeholders. The conversion of natural landscapes into industrial zones disrupts ecosystems, leading to biodiversity loss and long-term ecological damage. Companies operating in such environments must implement strict environmental controls and sustainable land-use planning to mitigate these risks.

The potential severity of pollution incidents, particularly in marine and terrestrial ecosystems, necessitates comprehensive spill prevention and response planning. Industrial operations, including refineries and fuel storage facilities, pose inherent risks to biodiversity due to potential spills, emissions and habitat deterioration. To mitigate these risks, the Group has developed structured environmental risk management strategies that include continuous monitoring, emergency response protocols and engagement with specialized spill response organizations.

These measures not only help prevent environmental harm but also reduce financial exposure by ensuring regulatory compliance and limiting the costs associated with pollution-related liabilities.

MORE's Renewable energy projects, while critical to producing green energy, also present biodiversity risks, particularly when developed in protected or ecologically sensitive areas. Wind parks, for example, can disrupt local wildlife habitats, leading to conflicts with conservation efforts. The financial implications of such risks include potential regulatory fines, costly mitigation efforts and reputational challenges among stakeholders who expect renewable energy to align with broader environmental goals.

Biodiversity sites

MOTOR OIL Group's operations interact with biodiversity-sensitive areas primarily through its renewable energy subsidiary, MORE, which operates wind farms within protected areas. While Group's refinery, fuels marketing and infrastructure projects do not directly impact protected ecosystems, its renewable energy assets require structured biodiversity risk management which is integrated in the Group's ERM system and conservation measures to ensure compliance with environmental regulations.

Regarding MORE's operation sites, habitat protection and biodiversity conservation are key considerations. These locations have been developed in compliance with Greek environmental legislation and all projects undergo strict environmental and ecological impact assessments (EIA) before approval. As part of these requirements, biodiversity management plans ensure that any temporary environmental disturbances during the construction and operational phases are properly addressed. During the reporting period, wind production farm of "Paliovoros – Sanida – Listi" of 22.50 MW was under construction.

The following wind farms are located within or near protected sites:

Tsitomi Wind Farm (Delphi, 23.00 MW) – Located 1.6 km inside the boundaries of a Natura 2000 area (GR2450009). The affected forest areas during construction have been restored and native plant species were replanted under the guidance of forestry authorities.

Kato Lakomata Wind Farm (Dorida, 19.20 MW) – Located 1.2 km inside a Natura 2000 area (GR2450004). Forested areas impacted during construction were restored following an environmental restoration study.

Psaromyta Wind Farm (Dorida, 9.60 MW) – Located 3.5 km inside a Natura 2000 area (GR2450004). Reforestation efforts ensured the recovery of affected vegetation.

Toumba – Anthovouni Wind Farm (Florina, 28.90 MW) – In close proximity to Natura 2000 sites GR1340003 and GR1340009. Habitat restoration efforts were conducted for impacted areas.

Kalogerovouni Wind Farm (Lakonia, 17.1 MW) – Located within Natura 2000 sites GR2540001 and GR2540007 SPA, with restored forested areas.

Terpandros Wind Farm (Lesvos Island, 4.80 MW) – Situated within Natura 2000 site GR4110100 SPA, with compliance to Environmental Terms Approval (ETA).

Antissa Wind Farm (Lesvos Island, 4.20 MW) – Located within Natura 2000 area GR4110100 SPA, where impacted forest land was restored under strict conservation measures.

Lyrkeio Wind Farm (Arkadia-Argolida, 39.60 MW) – Located inside a Natura 2000 area (GR2510004), where post-construction restoration was completed following national forestry guidelines.

Agia Dynati & Extension Wind Farm (Kefalonia, 34.50 MW) – Within Natura 2000 site GR2220006 SPA, with reforestation conducted according to a specialized restoration study.

Magoula Kazakou & Extension Wind Farm (Evros, 39.1 MW) – Located near the boundaries of Natura 2000 sites GR111003 SPA and GR1110100 SPA.

6.2 Impact, risk and opportunity management

6.2.1 Policies and Actions related to Biodiversity and Ecosystems [E4-2] [E4-3]

Biodiversity conservation and responsible environmental management are fundamental aspects of MOTOR OIL Group's operations. To strengthen commitment to sustainability, MOTOR OIL Group has established a Biodiversity Policy, approved by the Board of Directors, which applies to all subsidiaries. This policy is approved by the sustainability committee and aligns with the regulatory framework and best international practices. It defines Group's approach to minimizing negative impacts on biodiversity, integrating sustainability principles into Group's business model and contributing to the preservation and restoration of natural ecosystems. Through Group's stakeholder engagement plan, the affected communities and environmental authorities are engaged in the planning process, in order to identify potential social consequences that can be derived from the project development such as minimizing land disturbance and habitat fragmentation.

The Biodiversity Policy provides a framework to integrate biodiversity considerations into strategic and operational decision-making. It defines MOTOR OIL Group's commitment to avoiding and minimizing biodiversity loss through risk management and impact mitigation strategies, incorporating biodiversity management into the Group's Environmental Management System (EMS) to assess and monitor risks effectively, applying the mitigation hierarchy (avoid, minimize, restore, compensate) across all new and existing infrastructure projects, aiming for sustainable land use by avoiding new developments in protected biodiversity-sensitive areas where possible, promoting research, awareness and stakeholder engagement to enhance biodiversity protection and aligning with EU biodiversity standards, including the EU Taxonomy Regulation's "Do No Significant Harm" principles.

The policy applies to all subsidiaries and operational areas of the Group. It governs biodiversity considerations across all projects, stating that actions for sustainable agriculture, oceans, or forestry comply with the requirements set in national legislation. The Sustainability Committee is responsible for overseeing the implementation of the policy, while the Sustainability Division ensures its communication across all business functions. The policy commits to Greek and European biodiversity protection laws, including Law 3937/2011 on the Protection of Nature and Biodiversity, Presidential Decree 67/1981 on Wild Bird Conservation and Environmental Licensing Law 4014/2011, which includes Ministerial Decisions for Biodiversity Impact Assessments.

The Group integrates stakeholder engagement into biodiversity planning, collaborating with government agencies, NGOs, local communities and scientific institutions to ensure inclusive and science-based biodiversity management. For example, this includes partnerships with environmental authorities for permitting and biodiversity impact assessments, joint initiatives on habitat restoration and species protection, as well as engagement with local communities through stakeholder representative discussions to promote transparency, incorporate local knowledge and ensure social acceptance of projects.

Awareness and training programs are designed to address employees and subcontractors to ensure policy adherence. Any stakeholder will be able to access it once will be publicly available and internal dissemination will be conducted through employee training, newsletters and official documentation channels.

By adopting biodiversity offsets, habitat restoration efforts and nature-based solutions, MOTOR OIL Group aims to reduce environmental impacts while promoting sustainable development. Specifically, until know the Group through the operation of the forestry nurseries has managed to develop a capacity to produce 3.5 million plants. Through reforestation activities has already planted trees across 52 hectares of fire affected areas to support habitat regeneration.

Across all operational pillars, MOTOR OIL Group has implemented environmental impact mitigation plans aligned with regulatory requirements. Specific initiatives have been designed based on the nature of each business activity, ensuring that biodiversity considerations are addressed effectively.

Supply, Refining & Trading activities

Although the refinery itself is located within an industrial zone and is not classified as a biodiversity-sensitive area, the associated port facilities present potential biodiversity risks, particularly in relation to coastal and marine ecosystems. These ecosystems are vulnerable to impacts such as oil spills, waste discharge and habitat disturbance. As such, the Group has integrated biodiversity protection measures into both its refining operations and port-related activities.

MOTOR OIL Group refining operations are governed by a certified ISO 14001 Environmental Management System, which ensures best environmental practices are followed. MOTOR OIL Group has developed a comprehensive Facility Contingency Plan that complies with national legislation and international guidelines, focused on spill prevention, emergency preparedness and environmental protection. This includes collaboration with global response partners, regular emergency drills and strict anti-contamination protocols aimed at preventing damage to marine biodiversity.

The port facilities, due to their proximity to sensitive marine habitats, are subject to enhanced environmental risk management. The Group has identified and classified environmental risks at key port sites and implemented site-specific Operations Manuals, along with targeted plans for risk prevention, mitigation and emergency response. This includes a structured waste reception and handling plan for ship-generated waste and cargo residues, ensuring compliance with international marine pollution regulations such as MARPOL.

In addition, the Group integrates Best Available Techniques (BAT) to minimize land degradation and reduce unintended biodiversity impacts in both terrestrial and marine zones.

Fuel Retail activities

In the Group's retail operations, potential biodiversity risks stem primarily from fuel storage, transportation and distribution activities. To address these risks, the Group has implemented preventive environmental measures, including a structured spill response strategy at fuel depots. CORAL and AVIN have established an annual drill program, simulating spill containment and response scenarios, often in collaboration with local authorities. Additionally, an emergency response vehicle is deployed for rapid intervention in case of spills to prevent potential contamination of soil and nearby water bodies.

Subsidiaries involved in fuel distribution and alternative energy production have adopted waste minimization strategies to reduce hazardous material use in service stations and office operations. CORAL GAS has implemented LPG recovery initiatives, ensuring that non-compliant cartridges and cylinders are processed efficiently to prevent environmental contamination.

RES activities

Recognizing biodiversity related challenges, MORE ensures that all renewable energy projects undergo rigorous environmental assessments before construction and operation, balancing clean energy expansion with ecosystem preservation. Through environmental assessments' output, the Group aims to align its renewable energy initiatives with national biodiversity conservation goals while maintaining regulatory compliance and stakeholder confidence. MORE's operations within or nearby protected areas, require strict biodiversity impact assessments and mitigation strategies. To ensure sustainable operation within these sensitive ecosystems, the Group has developed a biodiversity monitoring and habitat restoration program that aligns with Environmental Terms Approval (ETA) requirements.

Monitoring and restoration programs are conducted to track wildlife interactions with wind farm operations, with special attention to bird mortality rates due to turbine activity. For wind energy projects located near sensitive habitats, biodiversity measures considered such as restoring native vegetation around turbine bases and deploying bird detection radar systems to protect endangered species. Where necessary, it has been installed monitoring systems (DtBird) which detect birds and can optionally take two independent actions to mitigate bird collision risk: the activation of warning sounds and/or the stoppage of the WTG.

Additionally, impacted forest areas from wind farm construction undergo reforestation and restoration efforts, where native flora species are replanted following specialized ecological assessments.

As part of the Forest program which support biodiversity, in 2024 the following initiatives took place for Renewable Energy projects:

- Reforestation activities at Kellas wind farm.
- Ongoing maintenance of restored forest areas in Tsamadorachi, Pournari, Korobili and Kassidiaris I & II.
- Compliance with reforestation fee obligations and phytotechnical restoration requirements.
- Nature-based solutions, such as utilizing native plant species for reforestation and promoting agroforestry practices are integrated into reforestation efforts, ensuring long-term ecosystem resilience.

Circular Economy & Alternative Fuels activities

Within MOTOR OIL Group's circular economy and alternative fuels division, including LPC and VERD waste management and alternative fuel production is integrated. It has to be noted that all installations operate in industrial areas and do not directly affect biodiversity sensitive areas.

THALIS Environmental Services ensures compliance with environmental regulations, particularly in infrastructure projects that may affect local ecosystems. THALIS environmental management framework incorporates best practices to minimize ecological disturbance during project execution.

A key initiative in the Group's circular economy strategy is the Forests Program, which supports reforestation, ecosystem restoration and carbon sequestration. This initiative aligns with the EU Biodiversity Strategy for 2030, promoting sustainable forest management and environmental research. The Amygdaleza ginning plant plays a central role in seed conservation, large-scale reforestation and biodiversity enhancement projects.

As the Group advances its biodiversity strategy, it remains committed to enhancing its monitoring frameworks, stakeholder collaborations and impact mitigation measures. The Biodiversity Policy serves as a guiding framework to integrate biodiversity considerations into business operations, ensuring that sustainability remains a core component of decision-making. Through continuous assessment, stakeholder engagement and adherence to international best practices, MOTOR OIL Group is dedicated to maintaining a positive environmental footprint and strengthening ecosystem resilience across its operations.

6.2.2 Targets related to Biodiversity and Ecosystems [E4-4]

At present, MOTOR OIL Group has not adopted measurable or results-oriented targets specifically related to biodiversity and ecosystems. This is primarily due to the complexity associated with biodiversity metrics, the challenge of establishing uniform performance indicators across a broad range of activities and limitations in current international standards and methodologies for biodiversity measurement and reporting.

Nonetheless, at MOTOR OIL Group, it integrates biodiversity protection and promotion into Group-level strategy. The Group continuously tracks and monitors the effectiveness of its actions, initiatives and policies in relation to biodiversity loss and impacts on species. MOTOR OIL Group's overarching aim is to contribute to a nature-positive society, ensuring that the operations of all Group companies support the preservation, development and regeneration of natural heritage and ecosystems.

While formal, measurable targets are not yet in place, the Group remains committed to enhancing its biodiversity strategy and aligning with emerging global frameworks, such as the Taskforce on Nature-related Financial Disclosures (TNFD). As these frameworks mature and provide more robust guidance, the Group will evaluate the feasibility of adopting science-based and results-driven biodiversity targets in the future.

6.3 Metrics

6.3.1 Impact Metrics related to Biodiversity and Ecosystems change [E4-5]

Description	Unit	2024
Number of sites near protected areas (leased)	No.	24
Area of sites leased near protected areas	ha	780.69

Biodiversity metrics reported derive from each operational site's licensing procedure and documentation, such as Environmental Terms Decisions or relevant licensing according to national legislation. Therefore, information regarding the proximity of operational sites to protected areas and consequent covered area in the above-mentioned licensing documentation, is externally validated and issued by competent authorities.

7 Resource Use and Circular Economy [E5]

Strategy	
Impact, risk and opportunity management	
E5-1	Policies related to resource use and circular economy
E5-2	Actions and resources related to resource use and circular economy
E5-3	Targets related to resource use and circular economy
Metrics	
E5-5	Resource outflows

7 RESOURCE USE AND CIRCULAR ECONOMY [E5]

7.1 Waste policies, actions and targets

7.1.1 Policies and actions related to resource use and circular economy [E5-1], [E5-2]

Policies on Waste and Resource Use

MOTOR OIL Group integrates sustainable waste management as a core pillar of its broader circular economy strategy, aiming to reduce environmental impact while enhancing resource efficiency across its value chain. The Group's waste policy reflects a forward-thinking approach grounded in the principles of the Best Available Techniques (BAT) and circular economy and is implemented through a certified Environmental Management System in accordance with ISO 14001.

This policy framework ensures the responsible handling of hazardous and non-hazardous waste, promotes waste prevention and supports recovery and reuse practices wherever possible. The Group's activities include:

- Lubricant regeneration, reducing the need for virgin materials
- Used Cooking Oil (UCO) collection to support biofuel production
- Municipal wastewater treatment, aiding water conservation and reuse
- Waste-to-energy and mechanical-biological treatment (MBT) solutions, aimed at reducing landfill dependency

The Group aligns its policies, supervised by Sustainability Committee, with national and European legislation, such as Law 4042/2012 in compliance with 2008/98/EU, continuously monitoring its compliance through regular EHS audits, performance monitoring and stakeholder collaboration by providing consultation, information and training to employees, contractors and other staff working on its behalf in order to ensure their commitment to safety and awareness.

Actions Taken on Circular Economy activitie

In line with its policy commitments, MOTOR OIL Group has launched a range of strategic initiatives and investments to support sustainable waste and resource management:

Expansion of Waste Infrastructure: The Group is scaling up its waste processing capacity through investments in Energy-from-Waste (EfW) and MBT facilities, allowing greater throughput and reducing landfilling.

UCO Collection Scaling: Through partnerships with the hospitality sector and investments in logistics, the Group is expanding its network for Used Cooking Oil collection to support circular biofuel production.

Lubricant Regeneration Upgrades: Existing facilities are being modernized to handle higher volumes and improve recovery efficiency, transforming waste into high-value secondary materials.

Municipal Wastewater Treatment Expansion: Modular, scalable wastewater treatment technologies are being deployed in collaboration with local authorities, improving cost-efficiency and service coverage.

Integrated Circular Economy Platform: MOTOR OIL Group operates a comprehensive circular economy platform that encompasses solid waste management, lubricant regeneration and municipal wastewater treatment.

These actions reflect MOTOR OIL Group's commitment to a resilient, low-carbon and circular economy, while also addressing key environmental risks associated with industrial waste, such as soil and water contamination, biodiversity loss and long-term remediation costs.

Refinery, Supply and Trading activities

At the heart of MOTOR OIL Group's environmental strategy is an integrated waste management system that is embedded within the refinery's operational framework. Every stage of waste handling - classification, collection, processing and final disposal - is meticulously managed to comply with environmental regulations and uphold MOTOR OIL Group's sustainability commitments. Refinery operations are central to Group's circularity strategy, focusing on reducing waste. Investments in advanced waste treatment infrastructure, including a planned hazardous waste facility, align with cutting-edge techniques like biopiling to manage hydrocarbon-contaminated soils.

Maximizing resource recovery remains a key priority within MOTOR OIL Group operations. Materials such as used catalysts undergo regeneration and metal reclamation through accredited third parties, contributing to the circular economy. Also, the Group assesses the possibility of repurposing oil sludge and petroleum residues for energy uses, instead of being discarded, supporting industrial circularity and minimizing environmental impact. To close material loops, it also contributes to the circular economy by utilizing spent catalyst as fuel in the metal industry. Additionally, sulfur recovery via Claus units reinforces sustainability objectives, ensuring that all processes contribute to greater efficiency and reduced waste generation.

Beyond conventional waste treatment, the Group employs biopiling, a BAT bioremediation technique that restores hydrocarbon-contaminated soils, further demonstrating its commitment to sustainability. During the reporting period, no significant amounts of CapEx and OpEx were dedicated. Waste processing is carried out in collaboration with certified partners who follow a strict framework, ensuring that materials are either recycled, repurposed, or disposed of responsibly and in compliance with regulations. More specifically, these partners are required by MOTOR OIL's procedure to be licensed according to relevant legislation and registered on Electronic Waste Registry for collection, transfer and management of hazardous waste for each type of waste. MOTOR OIL Group commitment to circularity extends across all operations, with a continuous drive for improvement that integrates innovation with environmental stewardship, ensuring that sustainability remains at the forefront of its strategy.

By refurbishing and maintaining refinery equipment, the Group extends equipment lifecycles, minimize waste generation and preserve valuable resources. These initiatives, alongside circular water usage and the integration of co-processed biodiesel into refinery fuel, further advance MOTOR OIL Group's commitment to reducing emissions and promoting renewable energy solutions.

Retail activities

Across Group's retail operations, waste minimization remains a priority. MOTOR OIL Group proactively reduces hazardous materials in production, service stations and offices, embedding sustainability into every aspect of the business. AVIN ensures responsible lubricant and packaging management through licensed companies, while CORAL GAS advances recycling efforts by repurposing tin plate sheet residues and recovering LPG from non-compliant cartridges and cylinders. Beyond individual initiatives, the Group reinforces sustainable practices through participation in national recycling programs, fostering a culture of environmental responsibility among employees and partners.

Recognizing the significance of waste management at all levels, the Group has implemented an Integrated Recycling Management System within the offices at Group's HQ, ensuring that solid waste is sorted at the source and that zero quantity of waste generated is directed to disposal. Staff training plays a key role in this initiative - by empowering its teams with the knowledge and tools to manage waste efficiently, the Group enhances its collective impact on sustainability.

Circular Economy and Alternative Fuels activities

Circular economic principles are integral to Group's approach to resource utilization and waste reduction, ensuring sustainability throughout the Group's operations. Through VERD, the Group contributes to sustainable energy solutions by directing sludge derived from wastewater to third parties' biogas plants, effectively eliminating solid waste. Any remaining effluents undergo a thorough oil separation process before being transferred to local treatment facilities. This focus on resource recovery is part of a broader commitment to waste minimization, ensuring that each step of waste handling - from collection to final disposal - aligns with MOTOR OIL Group's sustainability goals. By reprocessing waste materials and diverting them from landfills, the Group maximizes resource efficiency and reduce environmental impact.

PRASINO LADI strengthens Group's dedication to alternative fuels by collecting used cooking oils, which would otherwise be improperly disposed of and sending it to VERD for biodiesel production processing. This cleaner, renewable fuel contributes to emissions reductions and enhances the sustainability of its operations. This initiative is a key part of Group's circular economy strategy, supporting both the reduction of waste and the promotion of innovative, fuel alternatives. Similarly, LPC's regeneration of re-refined lubricants from waste lube oil (WLO) helps close resource loops, providing high-quality lubricants that are both sold domestically and exported internationally. These efforts further reduce waste while contributing to sustainable industrial practices.

THALIS further strengthens the Group's sustainability commitment through detailed waste management practices across its offices and construction sites. On construction sites, waste management is documented through invoices and waste delivery receipts for materials such as WEEE and lubricating oils. Non-hazardous solid waste, including paper, plastic, metals and wood, is responsibly managed alongside other office-related waste, supporting a comprehensive and transparent waste management system that ensures proper disposal and resource recovery.

Beyond these individual programs, the Group is actively engaged in European initiatives promoting sustainable development and waste recovery. Hazardous waste is managed through licensed companies, ensuring compliance and preventing contamination of municipal waste systems. Throughout its operations, it recovers products from refining processes that deviate from specifications and reprocess them wherever feasible, minimizing waste and enhancing resource efficiency. A comprehensive Recycling Management System is in place across all facilities, focusing on waste sorting at the source and integrating employee training to foster a culture of environmental responsibility.

Innovation is at the forefront of Group's waste management strategy. Participation in research projects in 2024 such as WASTEMILL, MAESTRO and HYDROGAS showcases Group's commitment to developing waste-to-value solutions. These initiatives explore new ways to transform organic municipal waste into valuable raw materials, optimize biofuel production and enhance energy recovery. Additionally, subsidiaries such as THALIS contribute to public engagement by raising awareness about circular economy practices, with initiatives such as the 2024 School Recycling Marathon further reinforcing Group's collaborative approach to sustainability. By continually integrating circular economy principles, the Group redefines sustainability, balancing operational excellence with environmental responsibility and aiming to positively impact future generations.

7.1.2 Targets related to resource use and circular economy [E5-3]

As part of Group's commitment to sustainability and the circular economy, its target by 2026 is to significantly scale up its waste management, renewable feedstock utilization and energy recovery capabilities across its operations. By that time, MOTOR OIL Group aims to manage over 300,000 tonnes of solid waste annually and municipal wastewater treatment capacity over 15 million cubic meters per year.

In the area of renewable feedstock, the Group plans to collect more than 28,000 tonnes of used cooking oil (UCO) annually. MOTOR OIL Group is also committed to increasing lubricant processing and regeneration capacity to over 43,000 tonnes per year. Finally, through strategic expansion of landfill gas and mechanical-biological treatment (MBT) capabilities, Group aims to develop over 35 MW of biogas-based energy recovery capacity, contributing significantly to Group's renewable energy portfolio.

While MOTOR OIL Group does not set specific targets related to waste from own operations, it's dedicated to responsible waste management and minimization practices in line with environmental regulations and circular economy principles. The Group actively implements measures to reduce, reuse and recycle waste, promotes the safe handling and disposal of hazardous materials and continuously seeks opportunities to enhance waste efficiency across its operations.

7.2 Metrics

7.2.1 Resource outflows [E5-5]

From oil and lubricant operations to packaging and industrial processes, waste takes many forms - each requiring careful handling. Sludges from oil/water separators, along with interceptor sludges and aqueous liquid wastes, are part of the broader challenge of liquid waste, demanding specialized treatment methods. At the same time, contaminated absorbents, filter materials and protective equipment reflect the operational realities of handling hazardous substances.

Generally waste streams from Group's facilities consist of: Oily solid waste (sludge), used catalysts from process units, resins, activated carbon, paraffin, waste lubricating oils (WLO), waste electrical and electronic equipment (WEEE), excavation, construction and demolition waste (ECSC), packages containing residues of dangerous substances, metal materials (scrap), absorbent materials and clothing that have been contaminated (oily rags), packaging materials, municipal solid waste (paper, plastics, food waste, etc.), laboratory waste, medical waste.

Across facilities, the Group encounters a diverse mix of materials, from end-of-life tires and vehicle components to lead batteries and spent catalysts. The refining process itself generates catalysts and transition metal-containing residues. Metals such as aluminum, iron and steel emerge from various activities, while plastic waste, cables and construction debris contribute to the complex waste landscape.

MOTOR OIL Group recognizes that packaging - whether paper, cardboard, plastic, or metal - plays a crucial role in logistics and product integrity, yet it also contributes to its waste footprint. Some of them contain hazardous residues, necessitating stricter handling. Similarly, the management of used oils, mineral-based lubricants and other engine fluids demands meticulous oversight, ensuring that what fuels industries do not burden the environment.

Beyond industrial sites, waste from discarded electrical equipment and fluorescent tubes reflects the breadth of MOTOR OIL Group's operations. While some waste streams are expected, others, such as sulphur and bitumen byproducts, highlight the unexpected intersections between sectors. Throughout it all, the Group remains committed to tracking, documenting and diverting waste from disposal wherever possible. Managing waste is not just an obligation, it is integral to how the Group operates, balancing efficiency with environmental responsibility.

Circular Economy and Alternative Fuels activities

VERD, as part of the Group's broader sustainability strategy, focuses on biofuel production by utilizing recycled materials such as used vegetable oils and animal fats. By processing these materials into biofuels, VERD furthers the Group's commitment to the circular economy. This process not only reduces waste but also promotes sustainability by lowering the environmental impact associated with traditional fuel production, reinforcing the Group's role in driving innovation in clean energy solutions.

LPC contributes to the circular economy through its specialization in regeneration of lubricants, offering a variety of products including base oils, blended lubricants (both bulk and packaged), greases and related by-products. The Group places a strong emphasis on resource efficiency and environmental responsibility, aiming that every stage of its lubricant production process aligns with sustainability goals. By processing waste lubricants and repurposing them into high-quality products, LPC supports a circular lifecycle for lubricants, reducing waste and promoting long-term sustainability within the industry. Indicatively, LPC has put into its regeneration process 34,137 MT of WLO in 2024.

Description	Unit	2024
The rates of recyclable content in products (including packaging)	%	n/a
The rates of recyclable content in products packaging	%	n/a
Total waste generated	MT	28,311.02
Total amount of non-recycled waste	MT	3,369.66
Percentage of non-recycled waste	%	11.9
Total hazardous waste generated	MT	7,247.78
Total non-hazardous waste generated	MT	21,063.24
Total radioactive waste generated	MT	0.00

Description	Unit	2024
Hazardous waste headed to incineration	MT	1.06
Hazardous waste headed to landfill	MT	497.27
Hazardous waste disposed using a different method	MT	1,802.43
Total hazardous waste directed to disposal	**MT**	**2,300.76**
Non-hazardous waste headed to incineration	MT	0.06
Non-hazardous waste headed to landfill	MT	1,068.84
Non-hazardous waste disposed using a different method	MT	0.00
Total non-hazardous waste directed to disposal	**MT**	**1,068.90**

Description	Unit	2024
Hazardous waste for preparation for reuse	MT	0.00
Hazardous waste for recycling	MT	3,359.15
Hazardous waste diverted from disposal using other recovery operations	MT	1,587.87
Total hazardous waste diverted from disposal	**MT**	**4,947.02**
Non-hazardous waste for preparation for reuse	MT	7,165.51
Non-hazardous waste for recycling	MT	9,049.91
Non-hazardous waste diverted from disposal using other recovery operations	MT	3,778.93
Total non-hazardous waste diverted from disposal	**MT**	**19,994.35**

Waste generated is classified according to European Waste Catalogue (Decision 2014/955/EE) and the relevant data derive from direct measurements. Disposal or recycling management methods take place exclusively by licensed third parties and outside the Group's facilities.

As far as operational sites are concerned, raw data of waste generated and presented in the above tables are submitted to the National Registry on an annual basis. During the submission process, entities that manage waste are required to submit quantities of hazardous and non-hazardous waste generated, collected, transferred and disposed/recycled. Therefore, all waste is tracked. Also, the quantities for Motor Oil refinery and LPC are validated under Eco Management and Audit Scheme (EMAS) annually. Finally, as far as Motor Oil's HQ and retail companies' offices integrated management system is concerned, waste collection, treatment and reporting are conducted by a certified third party. The KPI's presented are subjected to potential changes until final submission.

8 OWN WORKFORCE [S1]

8.1 Strategy

8.1.1 Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model [S1.SBM-3]

MOTOR OIL's Group strategy and business model, underscore its commitment to safeguarding its workforce by proactively addressing both existing and potential Impacts, Risks and Opportunities (IROs) as presented in Chapter: Material impacts, risks and opportunities [SBM-3]. The material risks and opportunities arising from impacts and dependencies are closely related to the strategy and business model of MOTOR OIL Group. Group's business model and strategy are guided by the principles and values of responsibility towards its employees in the realm of equal opportunities as well as occupational health and safety at work. Further information on Group's principles and values can be found in the Code of Ethics and Corporate Responsibility.

The Group has assessed a negative material impact on Health & Safety that stems from the inherent nature of oil and gas industry, including explosions, fires, chemical leaks which pose significant environmental and human health impacts. Nevertheless, in high-risk operations such as refining, rigorous safety protocols not only support the protection of employees but also foster trust among shareholders and unions. Additionally, extended working hours in sectors such as refining, retail, circular economy & alternative fuels and RES necessitate robust support systems to mitigate fatigue.

These challenges are met with policies, from equal opportunity initiatives ensuring fair hiring and career advancement to worker rights associations advocating for better conditions, particularly in refining and fuels sector. Professional development is supported by continuous training programs enhancing employability across sectors, complementing efforts to foster an inclusive workforce. At the same time, workplace harassment policies contribute to fostering a respectful environment, while comprehensive medical programs are also provided. These initiatives reinforce a culture in which safety and well-being are prioritized both within and beyond the workplace.

MOTOR OIL Group recognizes that its own workforce is a key group of affected stakeholders (further analysis regarding the stakeholders can be found in sub-Chapter: Interests and views of stakeholders [SBM-2]) and their interests, views and rights, including the respect for human rights, are integral to shaping the Group's strategy and business model. MOTOR OIL Group engages its employees through structured dialogues, feedback mechanisms and regular consultations. The Group actively integrates workforce-related insights into its strategic planning, fostering an inclusive work environment and reinforcing its commitment to fair labor practices and protection of human rights. This approach not only supports employee well-being but also strengthens the Group's long-term resilience and sustainable growth strategy.

Operating in an Oil & Gas sector, employees within MOTOR OIL Group face inherent challenges tied to the complexity of refining processes, the management of volatile substances and the potential for severe incidents such as explosions, fires, chemical leaks and falls. These risks, embedded in the sector, require constant vigilance, as safety must coexist with the operational demands of companies within the refining, retail, circular economy and alternative fuels and Renewables sectors. The unpredictability of hazardous environments underscores the need for a structured and proactive approach, ensuring that risk mitigation is not just a regulatory obligation but an integral part of daily operations.

The Group remains committed to safety protocols aligned with international standards, prioritizing measures that protect employees and maintain operational integrity. At the same time, the Group actively explores additional safeguards, including the integration of advanced safety technologies and the establishment of a competent health and safety committee, a body that serves as a focal point for identifying emerging hazards, reinforcing best practices and make efforts towards compliance with evolving regulations.

Beyond immediate operational safety, MOTOR OIL Group through its Code of Ethics and Corporate Responsibility takes a broader view of workforce well-being, to mitigate certain labor risks across operations and supply chains. While no material risks of forced or child labor have been identified, the adherence to the code allows the Group to proactively address geographic and operational vulnerabilities. Contractors and outsourced providers are encouraged to adhere to labor compliance practices aligned with international standards, reinforcing ethical employment practices and ensuring fair working conditions. The Group also recognizes that employee well-being extends beyond the workplace. Parental leave policies are designed to provide stability during key life transitions, with maternity leave fully covered by the employer before transitioning to state-subsidized extensions, while paternity leave ensures fathers can balance professional and family responsibilities.

By embedding proactive safety and workforce initiatives, MOTOR OIL Group strengthens both employee security and operational resilience. At the same time, the Group ensures that its strategic approach aligns with broader sustainability objectives, reinforcing stakeholder confidence and long-term performance.

Risks and Opportunities

Beyond operational challenges, MOTOR OIL Group navigates a complex landscape of organizational risks that directly influence long-term financial stability and growth. The capital-intensive nature of oil and gas operations demands constant oversight of potential liabilities, ranging from regulatory compliance costs to operational incidents that could lead to financial penalties, insurance cost increases and investor uncertainty. The Group mitigates these exposures through safety frameworks designed to prevent costly disruptions and safeguard operational continuity. By reinforcing risk management mechanisms, the Group maintains financial predictability, ensuring that profitability remains resilient even in a volatile regulatory and market environment.

Market expectations surrounding corporate responsibility and workplace policies also introduce financial considerations. The Group recognizes that an inclusive and diverse workforce is not just a social commitment but a financial safeguard against inefficiencies. A failure to address diversity-related risks could lead to higher turnover costs, recruitment difficulties and reputational damage, all of which carry financial consequences. Workplace safety and well-being are not only fundamental operational concerns but also key financial levers. Establishing a competent health and safety committee strengthens the Group's ability to identify and address risks early, reducing incident-related downtimes, regulatory fines and insurance liabilities. A safer work environment contributes to fewer operational disruptions, improved cost control and a lower risk profile - factors that directly support valuation strength and investor confidence. As the Group evaluates long-term growth strategies, the shift toward greener and climate-neutral operations presents both risks and financial opportunities. Transitioning to sustainable practices requires significant investment, but failing to adapt could expose the Group to regulatory penalties, carbon pricing mechanisms and shifting consumer preferences, all of which could undermine market positioning and ultimately impact its own workforce.

The broader workforce benefits (such as long-term incentive plans and special recognition awards, health check-ups, company-funded post graduate scholarships, family perks (eg. Childcare support) and case-based benefits including food cards/coupons/tickets restaurant) also serve as financial stabilizers, ensuring long-term employee retention and reducing the hidden costs of turnover, such as recruitment, onboarding and lost productivity.

Another avenue for financial resilience lies in worker representation through the Unions. Supporting a dedicated worker rights association and respecting the right to freely join trade unions and professional associations, mitigates risks associated with labor disputes, which can lead to costly work stoppages, legal proceedings and reputational harm. By fostering structured engagement channels such discussions, surveys and feedback mechanisms, the Group enhances internal stability, preserving business continuity and protecting revenue streams from disruption.

Investment in training and development further strengthens financial positioning by supporting the workforce remains equipped to meet evolving industry demands. Technical upskilling programs not only improve operational efficiency but also bridge knowledge gaps, increase productivity and quality, that could otherwise slow the Group's adaptation to emerging market trends. As sustainability imperatives reshape the industry, proactively aligning workforce capabilities with future operational needs safeguards long-term financial viability.

Types of own workforce

MOTOR OIL Group's workforce consists of both employees and non-employees who are subject to material impact due to the nature of their work. Employees include permanent staff and temporary employees, primarily engaged in office-based roles at the headquarters and operational positions across various sites (field-based). Non-employees, recorded at the end of the reporting period, mainly consist of contractors and individuals provided by Temporary Employment Agencies. These workers are predominantly engineers and their teams, as well as personnel employed at retail stations. Their work is primarily manual and field-based, involving operations within the refinery and retail locations. Given the demanding nature of these roles, workplace safety, fair employment conditions and adequate protections remain key priorities for the Group. All individuals within MOTOR OIL Group's workforce may be affected by the material impacts and opportunities previously outlined, unless otherwise indicated. The Group is dedicated to fostering an inclusive workplace where all employees have equal opportunities for professional growth and advancement.

8.2 Impact, risk and opportunity management

8.2.1 Policies and Actions related to Equal Treatment and Opportunities for All [S1-1] [S1-4]

Diversity

MOTOR OIL Group, unwavering its commitment to fostering a fair and inclusive workplace, ensuring equal opportunities for all employees and job applicants. Group's policies such as on Rewards & Recognition, Internal Career Opportunities, Training & Development, Talent Acquisition & Recruitment, are guided by principles of equality, non-discrimination and respect for employee dignity.

The Code of Ethics and Corporate Responsibility serves as a key resource, offering guidance on professional behavior in daily operations. No type of racial discrimination or discrimination related to gender, religion, age, nationality, social or national origin, disability, beliefs, sexual orientation, or trade unionism is tolerated. These principles apply and are implemented starting with the recruitment of new employees, as well as throughout the cooperation and professional development of MOTOR OIL Group's people. A gender-neutral work environment ensures that hiring decisions are based on merit, with zero tolerance for sexual harassment or discrimination. While equal opportunity practices, as outlined in Group's "Code of Ethics and Corporate Responsibility", apply across all operations, the specialized nature and skill requirements of refinery work have historically led to a lower percentage of female applicants. To address this, the Group is actively implementing targeted initiatives - such as partnerships with technical university programs. Additionally, the Group engages with NGOs and campaigns that promote women's empowerment in local communities, such as "Women On Top" (womenontop.gr), to encourage greater female participation in engineering roles.

MOTOR OIL Group has implemented several policies (e.g. Internal Career Opportunities policy, DEI Policy, Talent Acquisition & Recruitment Policy) to promote equal opportunities and mitigate gender and racial disparities in hiring and promotions. The "Internal Career Opportunities Policy" ensures that all group employees have equal access to internal career opportunities across all subsidiaries and general divisions of the Group, offering opportunities for lateral moves, career advancement and career change. This policy reflects its commitment to social causes by emphasizing diversity, equity and inclusion throughout the entire internal hiring process.

The "Talent Acquisition & Recruitment Policy" establishes objective and merit-based recruitment practices, in line with MOTOR OIL Group's commitment to fairness and equal opportunities for all candidates. Candidate assessment is conducted through a structured process, including CV screening, phone interviews, online assessments and competency-based interviews. This ensures that hiring decisions are based on merit and competency rather than bias.

The "Learning & Development Policy" applies to all employees excluding those with definite contracts, interns, external partners and contractors, except where mandatory training is required. Refinery employees operate under a separate Learning & Development Policy that follows the same guiding principles.

Additionally, there is a "Diversity, Equity and Inclusion Policy (DEI Policy) " which reinforces the Group's commitment to fairness, transparency and respect in the workplace by setting clear guidelines for inclusive talent management and professional development. The Group has developed a framework for DEI initiatives and programs, which are detailed within the policy. The Learning & Development Policy reinforces inclusivity by ensuring equal access to learning development opportunities, fully aligning with the company's core values.

MOTOR OIL Group remains committed to fostering a workplace culture that prioritizes equity and inclusion while promoting psychological safety and upholding fundamental human rights. In support of this commitment, mechanisms have been established under the Whistleblowing Policy, providing employees with a secure and confidential process for reporting concerns. The company encourages the submission of anonymous or identifiable reports regarding any illegal conduct through its designated reporting channels, fostering a transparent and accountable work environment.

To ensure compliance with its DEI agenda, the Group has established framework aligned with the EU Corporate Sustainability Reporting Directive (CSRD). Moreover, adherence to internationally recognized frameworks, as incorporated into Greek legislation, such as the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work and the OECD Guidelines for Multinational Enterprises which respectfully further strengthens the company's commitment to a transparent, fair and inclusive work environment. The Whistleblowing Policy also supports compliance with relevant Greek legislation, specifically Law No. 4990/2022 and Law No. 4808/2021, by covering specific types of misconduct.

In developing these policies, key stakeholders, including the Compliance Department, Legal Department and Sustainability division, have conducted thorough reviews and approvals. Their formulation has incorporated input from employees, HR professionals, senior executives and DEI specialists, ensuring alignment with best practices and organizational objectives. Regular employee surveys and feedback mechanisms contribute to refining these policies, addressing concerns related to equal opportunities, career advancement and professional development. Engagement with external partners, such as educational institutions and professional organizations, further strengthens the company's dedication to fostering an inclusive workplace.

The Group ensures that these policies are accessible to all relevant stakeholders. Employees can access them through internal communication channels, including the company's intranet (SharePoint) and dedicated training sessions, while external stakeholders can refer to them via the company's official website. During the onboarding process, new hires receive detailed briefings on relevant policies as

part of their induction program. Additionally, training sessions on the Code of Ethics and Corporate Responsibility and the Whistleblowing Policy are assigned to employees to reinforce compliance and awareness. Representatives from Human Resources department remain available to provide further guidance and ongoing training initiatives continue to promote understanding and adherence to these policies throughout the organization.

In addition, MOTOR OIL Group is committed to offering internal programs focused on strengthening the Group's culture and enhancing employees' understanding of Diversity, Equity and Inclusion (DEI). These initiatives aim to create a more inclusive and equitable work environment. Indicative programs and actions include continuous monitoring of diversity related metrics. Part of these metrics are pay equity, the share of women in the total workforce, the share of women in management positions (i.e. top management) and employees per gender within MOTOR OIL Group.

Lastly, MOTOR OIL Group integrates its dedication to DEI into the core of its Leadership Development Programs. These programs and initiatives are meticulously designed to instill DEI values in emerging leaders, ensuring that the principles of inclusivity, fairness and diversity are championed by future organizational leaders. This approach ensures that the Group's practices do not cause or contribute to material negative impacts on its workforce.

Human Rights

MOTOR OIL Group upholds high standards of integrity, fully adhering to applicable laws and regulations while respecting fundamental human rights. Group's commitment extends beyond compliance, embedding ethical labor practices, health and safety, security and environmental protection into the fabric of its operations. MOTOR OIL Group takes pride in being a signatory to the UN Global Compact, embracing its ten principles with respecting and abiding to the United Nations Declaration of Human Rights.

Promoting a workplace free from discrimination, the Group fosters an inclusive environment where factors such as gender, age, religion, marital status, racial or ethnic origin and sexual orientation have no bearing on compensation or career progression. MOTOR OIL Group's structured Rewards & Recognition Policy creates a fair and meritocratic approach to remuneration, reinforcing salary equity through a grade-based structure that aligns roles with their market value and impact.

Across all geographies where the Group operates, national legislation on child and forced labor is strictly observed. Such practices have never been condoned within Group's operations or those of its subsidiaries. Prevention is paramount and the Group actively oversees the evolving directive on corporate sustainability due diligence, equipping the Group with tools to identify, mitigate and address potential human rights and environmental impacts across MOTOR OIL Group's value chain. Among the responsibilities of the Sustainabitliy Division, is to ensure Group-wide compliance with ESG regulations, policies and frameworks, including climate-related obligations. It oversees the implementation of relevant ESG standards and stays informed on emerging legislation and industry best practices to maintain regulatory readiness.

A safe and respectful workplace is foundational to who the Group is. MOTOR OIL Group's Policy Against Violence and Harassment reflects this, addressing material risks and ensuring dignity at work. In alignment with local legislation (Law 4808/2021 and P.D. 80/2022), the Group takes decisive measures to prevent and respond to workplace violence, including gender-based and sexual harassment. Risk assessments, preventive measures and incident investigations, contribute to accountability at all levels.

MOTOR OIL Group's policy applies to all employees, regardless of contractual status and extends to trainees, apprentices, volunteers and third-party collaborators. The Group's Human Resources Manager, as the designated Reference Person, holds high accountability in guiding employees on prevention and response mechanisms. Transparency is key - policy details are accessible through its intranet, informational materials and direct communication channels, ensuring that all stakeholders remain informed and protected.

Employees who report concerns through internal channels are safeguarded against retaliation. This protection extends not only to them but also to their colleagues, relatives and external contractors, reinforcing a culture, where speaking up is encouraged and met with support.

MOTOR OIL Group recognizes its responsibility to create an environment where fairness, equity and respect are non-negotiable. By integrating human rights principles into Group's daily operations, it continues to shape a workplace that values dignity and ensures a future built on ethical business practices.

Training & Development

MOTOR OIL Group recognizes that continuous learning and development are critical to maintaining a competitive and skilled workforce. The Learning & Development Policy is designed to enhance employees' knowledge, skills and career progression opportunities through educational initiatives. It ensures that employees at all levels have access to training programs tailored to business needs and individual career aspirations. The policy is applicable to all employees across the Group, except for temporary workers, interns, external contractors and refinery employees, who are covered under a separate Refinery-Specific Training Policy.

To facilitate professional growth, the Group follows the 70-20-10 learning model, which balances experiential learning (70%), social learning (20%) and formal training (10%). This model ensures that employees gain practical experience on the job while also benefiting from learning opportunities and mentorship. Talent Management & Acquisition Division is responsible for overseeing the implementation and effectiveness of these policies, ensuring alignment with the Group's strategic priorities.

Comprehensive training programs at MOTOR OIL Group are designed to support both business needs and employee career progression. Regulatory compliance remains a priority, with mandatory training covering GDPR, cybersecurity, health and safety and corporate ethics, ensuring alignment with national and international labor standards. At the same time, job-specific expertise is strengthened through technical and functional training, particularly in operational roles such as refinery work, engineering and energy management. Recognizing that professional growth extends beyond technical knowledge, the Group places strong emphasis on soft skills, incorporating leadership, communication, teamwork and emotional intelligence development. Employees also benefit from access to professional qualification programs and industry-recognized certifications.

MOTOR OIL Group's training initiatives are delivered through a variety of learning formats, including in-person sessions, e-Learning and blended learning approaches. Employees engage in global learning platforms, industry conferences and postgraduate scholarship programs designed to foster long-term professional development. Structured mentorship and leadership development initiatives play a critical role in career advancement, particularly for underrepresented groups, reinforcing its commitment to workforce diversity and inclusion.

Training is scheduled based on workforce planning needs, closely monitored through SAP SuccessFactors and adaptable to individual requests. Employees can submit ad-hoc training requests, which are reviewed in collaboration with direct managers and HR, ensuring strategic alignment and resource efficiency. Engineers and white-collar staff follow an open and transparent training request procedure, while a structured funding process supports master's degree programs. In 2025, MOTOR OIL Group will introduce an Individual Development Plan pilot for engineers, focusing on personalized career growth and targeted upskilling.

A Workforce Skills Continuity framework tracks employee competencies per job code, aligning training schedules with shift programs to minimize disruption while accommodating additional learning opportunities. Internship programs further support early-career development, providing young professionals with valuable industry exposure.

International Assignments expand cultural awareness and professional exposure, allowing employees to engage in cross-location exchanges. At MOTOR OIL Group, its people are supported throughout their professional journey by offering a wide range of upskilling, reskilling programs. To further support continuous learning, the Group have introduced the "My Learning Path" initiative, leveraging SAP SuccessFactors as its core Learning Management System (LMS). This system provides access to over 9,000 courses from leading global training institutions, created to enhance employee development through a robust approach. The rollout includes: (1) building awareness through continuous learning reminders, (2) contextualizing learning based on business needs such as Finance, Sales and Performance Management, (3) creating a learner-driven culture where employees take ownership of their personal development within MOTOR OIL Group's strategic framework. Through Group's Leadership Development programs, its aim to cultivate, visionary leaders by equipping them with essential skills and an engaging leadership mindset. This empowers them to inspire their teams and drive long-term success. Group have established development centers designed to cultivate skills and support employee growth and career progression.

To ensure sustainable leadership pipelines, the Group has established the MOTOR OIL Mentoring Program, a development initiative aimed at enhancing learning agility and supporting employee growth. Additionally, the Talent Assessment and Selection Workshop equips leaders with talent selection competencies, ensuring fair and competency-based hiring decisions.

Training effectiveness is closely tracked through participation rates, skill development metrics and post-training assessments. SAP SuccessFactors documents individual development plans, ensuring alignment between training efforts, employee career trajectories and organizational needs. Employees complete designated training modules within specified timeframes, while feedback mechanisms, satisfaction surveys and post-training evaluations help refine programs to maintain alignment with both business objectives and employee aspirations.

Refinery activities

Employees follow a specialized Refinery Training Policy designed to uphold high operational and safety standards. Process safety, hazardous material management, emergency response and regulatory compliance are integral to refinery training modules. Certification programs include Permit-to-Work authorization, fire safety procedures and advanced engineering skills. Periodic retraining ensures employees maintain up-to-date knowledge, covering startup/shutdown procedures, environmental compliance and risk management protocols. Compliance with ISO-18788, ISO-27001 and emergency response plans is reinforced through recertification programs developed in coordination with regulatory bodies and industry experts.

Training activities within the refinery are managed collaboratively by the Training and Development Department and refinery departments. Each department appoints an "Area Training Leader" responsible for overseeing training initiatives, as detailed in their job description. A "Skills Map" is developed for each job position, specifying mandatory training subjects, reference materials, course descriptions, trainer lists, delivery methods (classroom, e-learning, field demonstration, simulator exercises, off-site training) and assessment criteria.

Scheduled retraining is required at a minimum in key areas, including:

- Fire safety and startup/shutdown emergency procedures for production units.
- Work Permit Certification: every three years for issuers, recipients and inspectors; every five years or approvers.
- Alkylation unit entry certification every three years.
- Fire safety training as per DEP HSM-36.
- ISO-18788 and ISO-27001 requirements for all refinery personnel and security teams.
- Emergency response planning for the Duty Engineer.
- Facility Contingency Plan for the jetty.
- ISO 17025 requirements for laboratory operations.
- First aid training for rescuers and nurses every three years.
- IRATA rescuer certifications per industry requirements.
- Inspection certifications.
- Professional certifications (Welder, Boiler Technician, Heavy Equipment Operator) as per their expiration.

Through these structured and evolving training programs, MOTOR OIL Group supports its employees to remain at the forefront of industry developments while fostering a culture of continuous learning, operational excellence and workplace safety.

Talent and Performance Management

The Talent Management & Acquisition Policy supports a meritocratic and transparent recruitment process, emphasizing equal opportunity hiring. Hiring decisions are based solely on qualifications, skills and experience, eliminating bias and fostering an inclusive workforce. This policy ensures that candidates are assessed fairly, with recruitment teams trained on non-discriminatory hiring practices. The General Manager of Human Resources oversees its implementation, ensuring compliance with national labor laws and internal workforce planning strategies.

The Performance Management and Employee Development Policy establishes a career progression framework, ensuring that employees receive clear performance evaluations, feedback and opportunities for professional growth. Additionally, one of Performance Management and Employee Development Policy is to strengthen the Group's commitment to the principles and values that govern ESG (Environment, Society, Governance) through key performance indicators, as well as to promote personal responsibility regarding its impact on society and the environment. Through SAP SuccessFactors, Group tracks performance metrics, aligning individual career development with organizational goals. Employees are provided with structured career pathways and have access to internal mobility programs through the Internal Career Opportunities Policy, ensuring career advancement and reskilling opportunities across different business units.

8.2.2 Policies and Actions related to Working Conditions [S1-1] [S1-4]

MOTOR OIL Group is committed to promote an inclusive, fair and equitable working environment that upholds internationally recognized labor standards and human rights. Group's policies and actions support diversity, non-discrimination, fair compensation, health and safety and professional development, aligned to internationally recognized frameworks, as incorporated into Greek legislation, such as ILO Declaration on Fundamental Principles and Rights at Work.

To effectively manage material impacts, risks and opportunities related to its workforce, the Group has implemented policies that promote occupational health and safety, fair treatment, social dialogue and continuous development. The General Manager of Human Resources oversees these policies, ensuring regular assessments and compliance with international labor standards.

The Group ensures that workforce policies are developed with input from HR professionals, senior executives, DEI specialists and employees. Regular employee feedback surveys contribute to refining policies related to equal opportunities, fairness in career progression and professional development. Additionally, external engagement with professional organizations and educational institutions supports its commitment to fostering an inclusive workplace.

To promote transparency, all policies are accessible through the Group's intranet, ensuring employees are aware of their rights and responsibilities. Employees also receive policy training during onboarding, including modules on ethics, corporate responsibility and whistleblowing.

Health & Safety

To navigate workforce-related risks, opportunities and material impacts, policies foster occupational health and safety, fair treatment, social dialogue and continuous development. Oversight by the General Manager of Human Resources ensures compliance with international labor standards, with regular assessments refining Group's approach.

Developing workforce policies involves collaboration with HR professionals, senior executives, DEI specialists and employees. Continuous feedback through surveys sharpens policies on equal opportunities, career progression and professional growth. Engaging externally with professional organizations and educational institutions further strengthens Group's inclusive workplace commitment.

Transparency remains fundamental. Employees receive training on ethics, corporate responsibility and whistleblowing as part of their onboarding.

To fulfil MOTOR OIL Group's commitment for a safe working environment, MOTOR OIL Group has developed and implemented an Integrated Management System covering areas such as Quality, Health, Safety, Security and Environment (QHSSE Management System) applied to all employees and workers who are not employees such as contractors, security personnels, interns across every operation. The QHSSE Management System is a line management accountability system and an integral part of how the Group conducts business. Its aim is to continuously improve processes and performance by assessing risks and controlling those as well as builds up from potential incidents identification and control (not just on actual incidents or near misses).

MOTOR OIL Group's Health and Safety Policy based on the "Goal Zero" philosophy, prioritizes accident prevention, occupational hazard elimination and operational integrity. Seeking zero harm, zero fatalities and zero significant incidents, the policy is embedded in an Integrated Management System (QHSSE), covering Quality, Health, Safety, Security and Environment. Compliance with ISO 45001:2018 ensures adherence to global occupational health and safety standards, while proactive risk assessments and hazard prevention strategies safeguard employees, contractors and operations.

MOTOR OIL Group's commitment extends beyond its workforce, to contractors, interns, security personnel and refinery visitors. Safety instructions upon entry reinforce expectations. Senior and line management bear accountability for policy implementation, ensuring continuous improvements.

Certified under ISO 45001:2018, the major operational sites' safety framework aligns with the European Directive 2012/18/EU (SEVESO III) and national legislation regarding hazardous circumstances. Protecting employees, contractors, local communities and business partners, the MOTOR OIL Group fosters open communication, promotes active safety participation and provides targeted training. The integration of environmental protection strategies ensures resilience in operations, benefiting both internal and external stakeholders.

Emergency preparedness remains a priority, with identified scenarios forming the basis of regularly tested response plans. All incidents, from near misses to significant events, undergo thorough investigation and documentation. Senior management continuously reviews and updates policies to maintain alignment with industry standards and best practices.

Retail activities

The Group extends its commitment to safety, social responsibility and labor standards into the retail sector, according to the following policies.

Safety & Security Policy

Safeguarding people, assets, information and corporate reputation, systematically addresses security matters. National laws, international standards and the Group's General Business Principles guide security management, with supervisors and specialized security firms overseeing implementation. Annual risk assessments inform proactive security measures, ensuring compliance while reinforcing a culture of vigilance.

Driving Policy

Recognizing driving as a high-risk activity, Retail Companies enforce strict road safety measures. Road Safety Studies guide hazard identification, regulatory compliance underpins operational standards and performance monitoring supports accident prevention. Comprehensive training for employees and contractors ensures alignment with the highest safety standards.

Drugs and Alcohol Policy

Maintaining a workplace free from substance-related impairment is a fundamental responsibility. Retail strictly prohibits the use, possession, or distribution of drugs and alcohol within its operations. Employees in high-risk roles, particularly in fuel, lubricant and chemical handling, undergo routine and specialized testing. Medical examinations post-incident further upholds workplace safety while respecting confidentiality.

Product Stewardship Policy

An approach to product management, ensuring compliance with regulatory standards while mitigating risks to employees, contractors, customers and the environment. Safety Data Sheets (MSDS) facilitate informed handling, storage and transport and emergency response plans safeguard against hazardous material incidents. Collaboration with experts and regulatory bodies drives continuous improvements in safety and environmental responsibility.

Non-Smoking Policy

Retail Companies reinforce health-focused workplace policies by regulating smoking in designated outdoor areas. Employees and visitors share responsibility for compliance, ensuring a work environment that prioritizes well-being.

Major Accident Prevention Policy

Managing risks inherent in petroleum and chemical product storage, handling and transport, retail companies adhere to SEVESO III regulations and national laws. The Major Accident Prevention Policy upholds stakeholder safety, extending protection to employees, contractors, visitors and local communities.

Refinery activities

All necessary measures are implemented to prevent accidents and injuries occurring in the workplace, aiming to minimize, the risks associated with the work environment. This includes a thorough consideration of the specific risks inherent in Group's activities. In the refinery, it is ensured that all staff receive effective environmental, safety and hygiene instructions on a regular basis. Health and safety and environmental training is repeated for new and relocated staff as well as learning from Incidents is a process which employees and the organization as a whole seek to understand any negative safety events that have taken place to prevent similar future events. In addition, it provides the personnel with the necessary and appropriate personal protective equipment, certified for protecting the employee for the specific job. In the event of a work-related accident, the company has adequate facilities (first aid rooms) to provide first aid and ensures that the employee receives further medical attention.

As part of its interest in employee welfare, Group's personnel and their families are provided a private life insurance and medical care program covering all hospital treatment expenses that may arise. The company also has a multi-membered safety section and specialized safety officers who are assigned the responsibility to identify the hazards, to recommend the specific preventive measures for each activity, to supervise and secure health and safety conditions at workplace as well as to reinforce the safety culture through safety walkthrough and meetings. As an aid to workplace accident prevention, the Company owns fire extinction vehicles and a multitude of stable and portable fire & smoke detection systems and extinguishers.

The accident prevention policy is implemented through the following methods,

- Strict adherence to legislation and internationally accepted codes, protocols and safety operation rules
- Continuous improvement of all safety and health control systems
- Record keeping of all incidents and near misses, investigations and adopting appropriate corrective action
- Continuous upgrade of all resources relating to individual safety and fire prevention, combined with personnel training on the use of these resources

The operational framework is considered, both internal and external factors, legislative requirements and stakeholder expectations, identifying the threats and opportunities that must be addressed including health & safety requirements and possible emergencies.

The Group addresses risks and opportunities in order, to ensure that the Integrated Management System can achieve the desired results, to enhance the desired effects, to eliminate or reduce unwanted effects, including the possibility of company's affecting from external environmental conditions and to achieve performance improvement.

Identifying risks and opportunities, as well as analysing, assessing and addressing risks, is an integral process within the company, carried out by upper management and executives in accordance with the Risk Management Procedure. This process is supported by daily meetings focused on business planning and operational procedures. The Integrated Management System Section is responsible for documentation, while risk management actions are embedded within the Integrated Management System processes.

The company takes actions to deal with threats and seize opportunities, address legal and other requirements and prepare and respond to emergencies. These actions are integrated into the processes of the Integrated Management System and the other business processes of the company and their effectiveness is evaluated.

In planning actions, the company takes into consideration,

- the hierarchy of controls and the results of the Integrated Management System
- best practical technological choices and
- financial, operational and company requirements.

The H&S objectives and targets - as they result from the applied risk analysis methods - can be achieved either, by their incorporation in the Occupational Risk Assessment or through specific H&S management programs. Occupational Risk Assessment methodology, as well as an H&S program, include and describe the necessary actions for achieving objectives and targets, means and time frame by which they are to be achieved and the relevant authorities and responsibilities for the above actions.

MOTOR OIL Group has established, implements and maintains processes for the communication and participation of employees of all levels and functions and, where appropriate, of employee representatives in the development, planning, implementation, performance evaluation and actions, improving the Occupational Health and Safety (OHS) management system. Participation allows employees to be included in the decision-making processes regarding Occupational Health and Safety (OHS) performance measures and proposed changes.

MOTOR OIL Group ensures that employees at all levels are encouraged to report hazardous situations so that preventive measures can be taken and corrective actions be implemented.

Specifically, the company has the mechanisms, time, training and resources necessary for consultation and participation. In these mechanisms is included the possibility of representing employees through the Committee on Occupational Health and Safety (EYAE - joint meetings of EYAE with the management of the Refinery to promote hygiene and safety issues in the workplace). It also provides timely access to clear, comprehensible and relevant information on the Health and Safety Management System which is developed in accordance with the requirements of the ISO 45001:2018 standard. Additionally, the company proactively identifies and eliminates barriers that may hinder employee participation, such as failure to address employee input or suggestions, language and literacy challenges, retaliation or the threat of retaliation and policies or practices that discourage or suppress employee engagement. Lastly, it emphasizes the consultation and active participation of all staff, including employees who do not hold managerial positions.

Circular economy & alternative fuels

Advancing sustainability initiatives, THALIS prioritizes safety and regulatory compliance, fostering a culture of continuous improvement through audits, risk assessments and training. Industry-specific strategies align with best practices, ensuring resilience in an evolving regulatory landscape.

In addition, VERD & PRASINO LADI integrate a structured and proactive approach to health and safety, ensuring compliance with legal frameworks while fostering a culture of preparedness and risk awareness. The adherence to national and industry-specific regulations, including P.D. 17/1996 and Law 3850/10, establishes a foundation where employee protection, operational security and environmental responsibility are prioritized. By implementing a comprehensive Internal Emergency Plan, the company ensures that all potential risks, from fire incidents to chemical leaks, extreme weather conditions, seismic events and security threats, are systematically assessed and addressed through pre-established protocols.

Emergency preparedness is reinforced through clearly defined response mechanisms, minimizing reaction time and human error during critical situations. The development of action plans for various scenarios, such as chemical leaks in storage or production areas, ensures that containment measures are effectively implemented, mitigating potential hazards to both employees and the surrounding environment. Preventative measures are further strengthened through the identification of evacuation routes, prioritization of areas requiring immediate action and coordination among designated response teams, aiming for a seamless and efficient reaction in times of crisis.

A strong emphasis is placed on training and continuous education, equipping employees with the necessary knowledge to act decisively and systematically. By fostering a workplace culture centered on safety, employees are empowered to recognize potential threats, respond appropriately and contribute to a collective effort in maintaining a secure environment. The integration of communication systems across all levels of operation enhances coordination, allowing for swift decision-making and immediate notification of authorities or neighboring facilities when necessary.

Beyond immediate emergency response, VERD & PRASINO LADI ensures the long-term protection of its workforce, infrastructure and surrounding community by continuously refining safety procedures and adapting to evolving risks. A structured approach to risk management translates into a safer workplace, reduced operational disruptions and strengthened trust among employees, partners and regulatory bodies.

Secure employment

MOTOR OIL Group fosters a work environment where opportunities, work-life balance and social protection are fundamental to employee well-being. A framework of policies (e.g. Rewards & Recognition Policy, Talent Acquisition & Recruitment) ensures transparency in hiring, equitable compensation and career development, reinforcing both national regulations and international labor standards. Fairness is embedded in every aspect of employment, from structured salary frameworks to recognition programs that celebrate contributions aligned with corporate values (Rewards & Recognition Policy).

The Group believes in meritocracy, where compensation reflects job responsibilities, experience and industry benchmarks. A grade-based salary structure eliminates disparities, ensuring remuneration remains competitive while maintaining internal equity. Performance-based incentives, allocated transparently through MOTOR OIL Group's Rewards & Recognition Policy, strengthen fairness across all business units. Beyond financial rewards, acknowledgment of employee contributions nurtures a workplace culture driven by motivation and excellence.

The Group has adopted an equal pay across without discrimination and regardless of gender, race, or any other factors, reflecting its continuous dedication to fairness and respect. By upholding this principle, not only the Group promotes equity and commitment to fostering a fair workplace but also its employees feel valued and appreciated for their contributions. Regular salary audits and equity reviews maintain alignment with market standards and internal principles, reinforcing a system where recognition is earned and fairness is given.

Work-life balance

At MOTOR OIL Group the importance of family and personal well-being is recognized. Along with the regulatory respective family-related leave options (e.g. paternity leave, parental leave, carer's leave, force majeure leaves and flexible working arrangements for parents and carers) the Group additionally provides a wide range of benefits (eg. Childcare support), in order, to support its team members during significant life events.

MOTOR OIL Group 'Rewards and Recognition Policy' has been conducted to celebrate the achievements and contributions of its employees, ensuring that their hard work and dedication are acknowledged.

By placing equal emphasis on both professional achievement and personal well-being, Group is dedicated to cultivating a supportive and balanced environment where its employees can excel in both their careers and personal lives. The Group offers a comprehensive range of employee benefits, including insurance policies that provide pension and medical treatment coverage, educational assistance schemes, Christmas parties for employees' families, long service awards, support for employees involved in sporting activities and discounts. These benefits are available to all employees based on their position and level within the organization, rather than the nature of their employment contract.

The Group remains committed to fostering a culture where productivity thrives alongside personal goals and development. Programs that safeguard physical and mental well-being complement these practices, ensuring employees feel supported at every stage of their professional and personal journeys.

Social Protection and Income Security

MOTOR OIL Group prioritizes efforts to safeguard its employees' financial security against challenges such as retirement, long-term illness, disability, or unemployment. To achieve this, the Group adheres to national labor laws and corporate agreements, providing severance payments and retirement benefits as required. Also, the Group offers a competitive compensation that reflects its employees' skills, experience and dedication. This approach underscores its commitment to attracting and retaining top talent, while fostering a positive and rewarding work environment for everyone within the organization and ensuring compliance with the minimum wage standards mandated by Greek law.

MOTOR OIL Group's commitment extends to comprehensive healthcare coverage for all employees, with public healthcare provided as part of the statutory benefits. For those with indefinite-term contracts, private health insurance through Generali enhances their coverage, offering protection against income loss due to illness or accident. This forms part of a broader strategy to secure its employees' well-being, which includes income protection from the start of their employment. In addition, for employees who voluntarily left are covered by social protection through Greek Law, provided that they must have completed 80 days of work in each of the two previous years before receiving benefits.

In the event of long-term illness or disability, both EFKA (National Social Security Fund) and private insurance schemes play a critical role in offering continued financial support, ensuring income security for affected employees. As part of its ongoing commitment to inclusion, the Group works diligently to foster an environment that supports employees with disabilities. By promoting workplace accessibility, Group ensures that everyone, regardless of their circumstances, has equal opportunities for growth and advancement within the company.

Tracking the effectiveness of its policies and actions related to material sustainability impacts, risks and opportunities, the Group is committed to adhering strictly to relevant targets and the scope of its policies. The Group monitors and evaluates relevant metrics on a case-by-case basis. Key metrics include those related to Diversity, Training and Skills Development and Health & Safety (can be found, under the Metrics segment). Additional metrics may also cover turnover ratios, the proportion of women in the total workforce and the percentage of women in management positions.

With regards to the achieved positive outcomes of its actions, in 2024, the Group's personnel completed 123,363 training hours on various topics, including 'Health & Safety' and 'Whistleblowing wrongdoings[6]' at work. The effectiveness of these actions is reflected in metrics such as Health and Safety incidents, complaints and severe human rights impacts.

[6] The Whistleblowing Wrongdoings are the following: The violations of EU law within the meaning of Article 4 of Law no. 4990/2022, as currently in force, as well as the legislation on combating violence and harassment at work, within the meaning of Articles 3 and 4 of Law no. 4808/2021. In addition, violations of the provisions of the Anti-Bribery and Corruption Policy and of the Group's Code of Conduct and Corporate Responsibility also fall within the scope of Wrongdoings.

Additionally, the outcomes are assessed through a biennial Employee Survey, with the most recent survey conducted in 2023. Survey results showed that,

- 76% of employees agree the Group strictly adheres to Health & Safety measures.
- 59% agree the Group provides sufficient job training.
- 59% agree the Group has adequate performance management processes.

The next survey is scheduled for 2025.

8.2.3 Processes for Engaging with Own Workforce and Workers' Representatives about Impacts [S1-2]

MOTOR OIL Group prioritizes employee engagement and continuous improvement of workforce policies through feedback mechanisms. Employees participate in satisfaction surveys, engagement forums and direct reporting channels, ensuring that workplace policies remain aligned with employee needs and evolving labor market trends.

To reinforce transparency, all workforce policies are accessible through digital platforms, ensuring employees are fully informed of their rights, benefits and professional development opportunities. Additionally, onboarding training includes mandatory policy briefings, ensuring that employees are well-versed in workplace rights and corporate governance policies.

Through satisfaction surveys, employee sentiment is monitored, allowing us to make data-driven improvements to workforce policies. Dedicated communication channels, ensuring open, two-way communication through focus groups, leadership feedback sessions and structured reporting mechanisms. Employees are encouraged to provide constructive feedback on career progression, diversity and work-life balance, ensuring continuous refinement of employment practices. The engagement through satisfaction surveys is conducted bi-annually. Ther is no pre-defined frequency on the leadership feedback on the results of the survey. By analyzing the results, the Group is committed to work on optimized processes, organization and decision-making methods.

The Group engages both directly with its workforce and with workers' representatives. Engagement occurs regularly through various mechanisms, including performance evaluations, feedback meetings, union meetings, regular joint meetings between Health & Safety Committee and management. Also, continuous monitoring and control of maintenance work with meetings held with contractors, weekly safety reports and monthly reports with critical safety indicators. Additionally, Safety Day events and weekly fire safety drills and Time Out for Safety (TOS) meetings are taking into place in order, to address safety observations and conditions. Refinery employees are represented through their trade union and the Health and Safety Committee. Specifically for the Health and Safety issues, corrective actions are considered a very important function of the Integrated Management System. In the refinery, working teams of relevant personnel are formed to analyze the Health & Safety issues and identify the required corrective action, which is approved by the management prior to its implementation. Records of corrective actions taken are maintained by the relevant Departments.

The Whistleblower Investigation Officer (W.I.O.) is responsible for receiving whistleblower disclosures and overseeing the investigation process. The W.I.O. operates independently and objectively and reports to the Board of Directors. The Reports Management Committee (R.M.C.) supports the W.I.O. and also reports to the Board of Directors. Additionally, the Compliance Officer or the Officer Responsible for Risk Management and Reporting (ORRMR) ensures engagement mechanisms are in place. Specifically, the OMRR, is responsible for designing and coordinating training activities on ethics and integrity while it participates in the development of internal policies to enhance integrity and transparency in the Group. Ultimately, the Board of Directors, having been informed on the progress of results of the investigations by the RMC and particularly the ORRMR, takes decisions on taking any corrective actions.

MOTOR OIL Group complies with Law 4990/2022, which transposed EU Directive 2019/1937 into Greek law, protecting persons who report breaches of EU law. The Collective Bargaining Agreement with the Hellenic Federation of Enterprises describes the terms of employment and pay levels at the refinery, aiming to achieve continuous improvements in working conditions and develop mutually beneficial relations. Furthermore, within the code of ethics and corporate responsibility, which applies to all employees of the group, is specifically mentioned the respect and the support for human rights.

The Group, through its sphere of influence, supports and respects the protection of human rights and ensures that any type of violation or infringement thereof is avoided. Inter alia, the avoidance of child and forced labor and the respect for the principles of non-discrimination in the workplace.

MOTOR OIL Group assesses the effectiveness of engagement through continuous monitoring and control of maintenance work, monthly and weekly reports with critical safety indicators, safety management assessment programs, training programs and feedback mechanisms, employee performance management systems including annual performance evaluations and employee engagement surveys such as the updated survey launched in 2023.

The outcomes of the engagement of own workforce, is communicated internally. For example, the results the employee survey was communicated through intranet to all the employees. The resources allocated to engagement, are among others, the HR General Division and the Group's Health and Safety departments along with other departments within the organization that they might be involved in the impacts.

MOTOR OL Group has adopted a Whistleblowing Policy that protects employees against retaliation and ensures the protection of personal data for all parties involved. The Local Safety Committee represents all workers and contractors and discusses health and safety hazards, ensuring strong participation from various roles such as QHSSE Advisors, Technical Inspectors, Occupational Hygienists and a Safety Technician.

Lastly, MOTOR OIL Group has adopted a comprehensive and extent Stakeholder Engagement Plan (SEP), which aims to enhance transparency, strengthen two-way communication and align MOTOR OIL with social, environmental and regulatory expectations. It includes analyzing the connection between each stakeholder group and the company to identify critical interaction points, understand impacts and interdependencies and recognize potential conflicts. Additionally, the plan ensures compliance with ESG standards while identifying risks and opportunities that arise from stakeholder relationships, fostering stable and effective long-term partnerships.

8.2.4 Processes to Remediate Negative Impacts and Channels for Own Workforce to Raise Concerns [S1-3]

The Group has recognised a negative impact on Health and Safety. In response to that, it has Upholding ethical labor standards that require more than policies; it demands a culture where integrity is protected and concerns are addressed. MOTOR OIL Group recognizes that ensuring accountability strengthens trust and corporate governance. A key component of this commitment is the Whistleblowing Policy, a framework that guarantees employees and stakeholders access to confidential and anonymous reporting channels, reinforcing transparency at every level. This policy is designed to align with Greek legal frameworks, notably Law no. 4990/2022 and Law no. 4808/2021, ensuring that all reports are handled with diligence and fairness. The Group's Reports Management Committee (R.M.C.) systematically reviews cases, applying corrective measures where necessary. Employees benefit from multiple reporting options, including an electronic platform, written submissions and direct meetings with the Whistleblower Investigation Officer (W.I.O.) or Compliance Officer, each ensuring confidentiality.

The Group has established multiple reporting channels. Any employee, external partner or other person falling within the scope of the Whistleblowing Policy as well as the Policy against Violence and Harassment at Work suspecting that a wrongdoing (as mentioned at the above Policies) is occurring may contact the Whistleblower Investigation Officer (W.I.O.) or the Compliance Officer (for the Group companies that have not designated an W.I.O.) and in any case to communicate by name or anonymously through the following communication channels:

Whistleblowing Platform: whistleblowing.moh.gr

Written report - Letter marked «attention of the W.I.O. or of the Compliance Officer (for Group companies that have not appointed an W.I.O.) » or «Reference of Law 4808/2021 or Law 4990/2022» to the address: Irodou Attikou 12A, 151 24, Marousi, Greece

Personal meeting with the W.I.O. or with the Compliance Officer (for Group companies that have not appointed a W.I.O.), upon submission of a request in writing or orally or via email to the W.I.O. or the Compliance Officer respectively. Furthermore, in the event that a whistleblowing report is received by an unauthorized person, they are obliged to forward it to the W.I.O. immediately, without any modification of its content or disclosure of information that may lead to the identification of the whistleblower, or any third party named in the report, in compliance with the provisions of Law 4990/2022.

Whistleblowing is not confined to internal misconduct; it extends to external risks that may compromise business ethics. A grievance mechanism is in place to address fraud, corruption, discrimination, workplace violence and other regulatory breaches. This applies not only to employees but also to external partners and individuals connected to the Group, ensuring that ethical expectations are upheld across all stakeholder interactions.

MOTOR OIL Group prioritizes an environment where reporting misconduct does not result in retaliation. Exclusion from professional development programs, negative performance evaluations, or workplace ostracization are actively prevented. Awareness campaigns, internal communications and training programs reinforce this protection, ensuring that employees understand their rights and the mechanisms available to them. Beyond traditional reporting avenues, the Group has embedded additional safeguards within its broader governance framework. The Committee on Occupational Health and Safety (EYAE) functions as a collaborative forum where employees and management jointly address workplace hygiene and safety concerns. These discussions further enhance transparency while identifying risks before they escalate into critical issues. In the context of the Integrated Management System, corrective actions are considered a very important. In the refinery, a working team of relevant personnel is formed in order to analyze the Health & Safety issue and identify the required corrective action, which is approved by the management prior to its implementation. Records of corrective actions taken are maintained by the relevant Departments.

Ensuring these channels are trusted requires more than policy enforcement - it demands continuous engagement. MOTOR OIL Group integrates whistleblowing awareness into broader corporate communications, leveraging company's intranet (SharePoint), newsletters and email updates to keep employees informed. Training sessions provide practical guidance, reinforcing the message that raising concerns is not just permitted but encouraged. The Group employs structured monitoring through control mechanisms such as safety management assessments, maintenance work reviews and key safety indicator reports. Monthly and weekly updates track trends, allowing for targeted improvements in response protocols and risk mitigation strategies.

Transparency is also reinforced through MOTOR OIL Group's commitment to structured dialogue. The Local Safety Committee, which includes QHSSE Advisors, Technical Inspectors, Occupational Hygienists and Safety Technicians, convenes regularly to evaluate emerging concerns.

At the core of these efforts is a firm stance against retaliation. The Whistleblowing Policy explicitly safeguards individuals who use reporting channels, from any form of adverse action. Protection measures extend beyond formal policies, embedding anti-retaliation principles into the organization's ethical framework to uphold fairness and trust. Ultimately, integrity and accountability are not static objectives but ongoing commitments. By maintaining rigorous oversight and continuously refining whistleblowing mechanisms, the Group ensures that its governance structures remain robust. MOTOR OIL Group believes that ethical operations do not merely protect employees - they enhance long-term resilience, investor confidence and corporate sustainability.

8.2.5 Targets related to Health & Safety [S1-5]

MOTOR OIL Group prioritizes a safe work environment, integrating rigorous Health & Safety measures designed for accident prevention and risk mitigation. These initiatives are supported by strict adherence to industry regulations, ongoing monitoring and structured programs aimed at reinforcing employee well-being and operational resilience. Central to these efforts is the Group's ongoing "Goal Zero" target, a firm commitment to achieving zero fatalities, preventing major industrial accidents and reducing workplace incidents across all operations, including refining, marketing and distribution.

With absolute targets for zero fatalities and major industrial accidents, the Group also strives to position its Lost Workday Incident Frequency (LWIF) and Process Safety Event Rate (PSER) within the second quartile of European industry benchmarks.

The Group aligns its safety measures with global standards such as ISO 45001 certification and European Directive 2012/18/EU on major accident prevention. Scientific principles and risk assessments guide target-setting, while industry benchmarking and feedback from stakeholders - including management, safety committees, workforce representatives and external auditors - ensure that these goals are both ambitious and achievable. Stakeholder engagement plays a critical role in maintaining alignment with evolving safety priorities and regulatory requirements.

Performance is monitored through monthly tracking of incident rates and safety compliance, ensuring that progress is continuously assessed. Employee feedback on safety training helps refine and enhance the programs, supporting the Group's commitment to a resilient and responsive safety culture. Targets are regularly updated, incorporating changes in regulatory frameworks, industry benchmarks and incident analysis to maintain the highest standards.

At present, MOTOR OIL Group has not established specific targets related to violence and harassment. However, the effectiveness of its active policy is demonstrated by the absence of any related incidents within the Group.

8.2.6 Targets related to Equal Treatment and Opportunities for All [S1-5]]

At MOTOR OIL Group, while there is not specific setting targets related to equal treatment and opportunity, its commitment to these principles is deeply ingrained in the organizational culture. The Group continuously track and assess the effectiveness of its policies and actions, as previously mentioned in section 'Equal treatment and opportunities for all | Policies and actions [S1-1] [S1-4]' through regular evaluations and feedback mechanisms, ensuring that its practices promote equality and diversity. By focusing on measurable outcomes and maintaining an open dialogue with its employees, the Group strive to create a work environment where every individual has the opportunity, to succeed and thrive. In future reporting periods, Group intends to examine establishing specific targets related to the topic.

8.3 Metrics

8.3.1 Characteristics of the undertaking's employees [S1-6]

The following table discloses the total number of employees for 2024 in MOTOR OIL Group (incl. Associate companies) by headcount and breakdown by gender and type of employment contract. The following data concerns the number of employees at the end of the reporting period as 31.12.2024.

Description[7]	2024
Number of employees (head count)	3,332[8]
Number of male employees	2,692
Number of female employees	640

Description[9]	2024
Number of employees (Greece)	3,246
Permanent employees (male)	2,478
Permanent employees (female)	608
Temporary employees (male)	214
Temporary employees (female)	32
Non-guaranteed hours employees (male)	0
Non-guaranteed hours employees (female)	0

MOTOR OIL Group has significant employment with at least 50 employees representing at least 10% of total number of employees, which is 3,246 in Greece.

Description[10]	2024
Number of employees who have left the undertaking	267
Percentage of employee turnover (%)	8%

The total number of employees who have left the Group's workforce due to dismissal, resignation and retirement during the reporting period is 267 with the employee turnover being 8%. From turnover data, the contract expirations for fixed-term employees, have been excluded, since they do not count as a turnover-related exit.

The total number of employees for 2024 reported in the Sustainability Statement also includes employees from Associate companies (63 employees). The total number of employees, excluding those from Associate companies, is 3,269, as stated in 'Note 1: General Information' of the Financial Statement.

[7] All metrics have been measured at the end of the reporting year. The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]
[8] The total number of employees reported in the Sustainability Statement also includes employees from Associate companies (63 employees). The total number of employees, excluding those from Associate companies, is 3,269, as stated in 'Note 1: General Information' of the Financial Statement.
[9] All metrics have been measured at the end of the reporting year. The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]
[10] All metrics have been measured at the end of the reporting year. The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]

8.3.2 Characteristics of non-employee workers in the undertaking's own workforce [S1-7]

Description[11]	2024
Number of non-employees in own workforce	8,460

The above-mentioned number of Non – employees (headcount, at the end of the reporting period) include mainly contractors and employees provided by Temporary Employment Agencies.

The type of workers that were occupied were mostly engineers and their teams, along with workers that are occupied in Group's retail stations. The type of work that is performed is mainly manual (field-based work in the refinery and retail stations).

8.3.3 Collective bargaining coverage and social dialogue [S1-8]

Description[12]	2024
Percentage **(%)** of total employees covered by collective bargaining agreements **(Group)**[13]	100%
Percentage **(%)** of own employees covered by collective bargaining agreements **(Greece)**	100%
Percentage **(%)** of employees covered by workers' representatives **(Greece)**	54%

The percentage of employees covered by workers' representatives is calculated as the proportion of employees in the Group's companies with a union in Greece relative to the total workforce across all the Group's companies operating in Greece.

8.3.4 Diversity metrics [S1-9]

Description[14]	2024
Male employees at top management level	124
Percentage (%) of male employees at top management level	91.18%
Female employees at top management level	12
Percentage (%) of female employees at top management level	8.82%
Employees under 30 years old	391
Percentage (%) of <30 aged employees	11.73%
Employees between 30 and 50 years old	2,064
Percentage (%) of 30-50 aged employees	61.94%
Employees over 50 years old	877
Percentage (%) of >50 aged employees	26.32%

[11]The number of non-employees is reported in headcount, counting everyone regardless of full-time or part-time status. At the end of the reporting period, non-employees mainly include contractors and employees from Temporary Employment Agencies. The workforce primarily consists of engineers and their teams, as well as workers in retail stations, performing mostly manual, field-based work in refineries and retail locations. The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]
[12]MOTOR OIL Group does not have any representation agreements in accordance with the European Works Council (EWC), Societas Europaea (SE) Works Council, or Societas Cooperativa Europaea (SCE) Works Council. [S1-8 63 b] [S1-8 AR 70] The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]
[13]All EU-based geographies are covered 100% by law. For some geographies outside the EU collective bargaining agreement is not applicable.
[14]All metrics have been measured at the end of the reporting year. The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]

All metrics have been measured as of the end of the reporting year 2024 and extracted from the HR Department's software. The top management metrics include employees at a specified grade and above - defined by the group at the company level - and commonly referred to in the market as senior management.

8.3.5 Adequate wages [S1-10]

Description[15]	2024
Percentage (%) of employees that earn below the applicable adequate wage benchmark	0.00%

The topic of 'adequate wages' has not been classified as material based on the DMA outcomes. However, in keeping with MOTOR OIL Group's commitment to transparency and responsible reporting, it continues to disclose relevant metrics on this matter. All employees within the Group receive fair and adequate compensation, with their wages exceeding the stipulated minimum wage by law.

8.3.6 Social protection [S1-11]

The topic of 'social protection' has not been classified as material based on the DMA outcomes. However, in keeping with MOTOR OIL Group commitment to transparency and responsible reporting, it continues to disclose relevant metrics on this matter. MOTOR OIL Group ensures compliance with EU regulations and national social protection frameworks, with its primary operations in Greece. Firstly, sickness benefits are fully covered under Greek legislation and EU regulations. Employees in Greece are protected by the EFKA (National Social Security Fund), which provides medical expenses, hospitalization and sick leave benefits. Additionally, Regulation (EC) No 883/2004 ensures continuity of healthcare coverage for employees working across EU member states, while Directive 2011/24/EU guarantees access to medical treatment in other EU countries under comparable conditions. In addition, unemployment benefits are partially covered, with EU regulations coordinating benefits while Greek law determines eligibility and amounts. Employees in Greece are entitled to unemployment support through OAED (Greek Employment Organization), which administers benefits according to national legislation.

Moreover, employment injury and acquired disability coverage are fully provided under both Greek law and EU regulations. Workers in Greece are insured through EFKA (National Social Security Fund), ensuring compensation for workplace injuries and acquired disabilities. Regulation (EC) No 883/2004 facilitates the coordination of such benefits for employees moving between EU states. At the same time, Directive 89/391/EEC mandates occupational safety and health measures to prevent workplace risks.

Equally important, parental leave rights are fully secured through Directive 2019/1158/EU, which has been transposed into Greek labor law. In Greece, mothers receive paid maternity leave for 17 weeks, while fathers are entitled to 14 days of paid paternity leave. Furthermore, employees can extend their leave through unpaid parental leave or special childcare leave, partially compensated through social security schemes. Also, the Group provides severance payments and retirement benefits as required, by EU regulations ensuring the portability of pension rights while Greek law defines the benefit structure. Employees contribute to EFKA (National Social Security Fund), which administers both national and supplementary pension schemes.

[15] The Group ensures that all employees receive an adequate wage, consistent with applicable benchmarks, standards and legislation.

8.3.7 Persons with disabilities [S1-12]

Description	2024
Number of male employees with disabilities	4
Number of female employees with disabilities	4
Total number of employees with disabilities	8
Percentage **(%)** of persons with disabilities amongst employees, subject to legal restrictions on collection of data	0.24%

Group employees with disabilities are in accordance with the legal definitions of disability in the countries where it operates, ensuring compliance with regional labor regulations. There are no reported employees with disabilities across the countries in which the Group operates, except Greece.

8.3.8 Training and skills development metrics [S1-13]

Description	2024
Male employees **(%)** that participated in regular performance and career development reviews	99.84%
Female employees **(%)** that participated in regular performance and career development reviews	100%
Percentage **(%)** of employees that participated in regular performance and career development reviews	99.87%
Percentage **(%)** of Senior management that participated in regular performance and career development reviews	100%
Percentage **(%)** of Office based employees that participated in regular performance and career development reviews	99.78%
Percentage **(%)** of Field based employees that participated in regular performance and career development reviews	100%
Average number of training hours **(male)**	44.25
Average number of training hours **(female)**	6.60
Average number of training hours **(total)**	37.02

The Group provides equal training opportunities to all employees, tailored to their respective roles. However, in industrial facilities, such as the Refinery, due to the specific demands and the associated requirements, the workforce is primarily male, with the average training hours of men being higher.

8.3.9 Health and safety metrics [S1-14]

Health and safety[16]	2024
Percentage **(%)** of people who are covered by health and safety management system	100%
Number of fatalities in own workforce as result of work-related injuries and work-related ill health	0
Number of fatalities as result of work-related injuries and work-related ill health of other workers working on undertaking's sites	0
Number of recordable work-related accidents for own workforce	7
Rate of recordable work-related accidents for own workforce	1.98
Number of cases of recordable work-related ill health of employees	0
Number of days lost to work-related injuries and fatalities from work-related accidents, work-related ill health and fatalities from ill health related to employees	614

8.3.10 Work-life balance metrics [S1-15]

Work-life balance[17]	2024
Percentage **(%)** of employees entitled to take family-related leave	100%
Percentage **(%)** of entitled employees that took family-related leave	7.53%
Percentage **(%)** of entitled employees that took family-related leave (male)	6.32%
Percentage **(%)** of entitled employees that took family-related leave (female)	12.66%

In accordance with labor law, all employees in a dependent employment relationship are entitled to family-related leave. Specifically, Articles 24 to 45 of Law 4808/2021 encompass the majority of leave provisions within this category.

8.3.11 Remuneration Metrics (pay gap and total remuneration) [S1-16]

Gender equality and equal pay for work of equal value[18]	2024
Gender pay gap (%)	31.54%
Annual total remuneration ratio	60.83

All relevant numbers have been calculated based on the average gross hourly pay level. In the pay, components such as the Annual Gross Salary (actual payroll data for employees with a full year of employment, as well as full-year projections for new hires and those who were not employed for the entire year for any reason), Bonuses paid through payroll and Stock Options & RSUs were included.

[16] The Group's Health & Safety activities across its business segments (Refinery, Retail, Circular Economy & Alternative Fuels, RES) are validated by ISO 45001:2018. [ESRS2 MDR-M b]

[17] All metrics have been measured at the end of the reporting year. The related leaves are formally reported to the competent authorities and are subject to applicable regulatory oversight and control procedures other than the assurance provider. [ESRS2 MDR-M b]

[18] All metrics have been measured at the end of the reporting year. The related metrics have not been validated by an external body other than the assurance provider. [ESRS2 MDR-M b]

The exact same components were included in last year's data. The only addition this year is that all numbers are now expressed in hourly pay rather than monthly pay. Last year, the same assumption regarding full-year employment was applied. Regarding Stock Options, the amount added to the Total Compensation for the respective employees is not the stock's full value but rather the difference between the stock's value and the agreed stock option price.

8.3.12 Incidents, complaints and severe human rights impacts [S1-17]

Measures against violence and harassment in the workplace	2024
Number of incidents of discrimination	0
Number of complaints filed through channels for people in own workforce to raise concerns	0
Number of complaints filed to National Contact Points for OECD Multinational Enterprises	0
Amount (€) of fines, penalties and compensation for damages as result of incidents of discrimination, including harassment and complaints filed	0.00

Human right violations	2024
Number of severe human rights issues and incidents connected to own workforce	0
Number of severe human rights issues and incidents connected to own workforce that are cases of non-respect of UN Guiding Principles and OECD Guidelines for Multinational Enterprises	0
Amount (€) of fines, penalties and compensation for severe human rights issues and incidents connected to own workforce	0.00

Additionally, to the information reported in the above table, no incidents of discrimination, including harassment, were reported within the Group's companies during the reporting year. Furthermore, no cases of severe human rights violations were identified within the Group's companies. No penalties, fines, or compensation for damages were imposed as a result, of any incidents or complaints related to discrimination, harassment, or severe human rights violations.

9 Affected Communities [S3]

Strategy	
SBM-3	Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model
Impact, risk and opportunity management

S3-5	Targets related to Managing Material Negative Impacts, Advancing Positive Impacts, and Managing Material Risks and Opportunities

9 AFFECTED COMMUNITIES [S3]

9.1 Strategy

9.1.1 Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model [S3.SBM-3]

The primary beneficiaries of the Group's initiatives are local communities - meaning communities that are either directly engaged with or located around the facilities, as well as the broader national context in which the core operations of the organization are conducted - which experience significant improvements in infrastructure, access to essential services and overall quality of life. Through the Group's investments, residents benefit from enhanced economic opportunities, better healthcare facilities, improved transportation networks and the creation of job opportunities, leading to increased employment prospects and community well-being. These benefits are particularly impactful for vulnerable groups within local communities, such as low-income families, youth and the elderly, who stand to gain from improved social services and economic opportunities.

Although MOTOR OIL Group has not identified any significant impacts on affected communities, the Group remains committed to supporting these communities, particularly those located near its areas of operation.

These communities are often at the heart of the Group's engagement efforts, as the development and operational activities surrounding the refinery play an important role in shaping their daily lives. By improving essential infrastructure and promoting social development, the Group's investments help uplift these communities, making them more resilient and better equipped for long-term prosperity.

Risks and opportunities

The operation of refineries, renewable energy installations and petroleum facilities introduces significant risks and opportunities for MOTOR OIL Group, with direct financial implications tied to the impacts on local communities and stakeholders. Noise, visual disturbances and landscape changes can affect the quality of life for nearby residents, potentially leading to dissatisfaction, reduced property values and increased regulatory scrutiny. These risks can result in increased costs related to environmental protection, community engagement and potential legal liabilities. For the Group, such disruptions may also harm the public perception of its operations, influencing brand reputation and, ultimately, customer loyalty, which could have financial consequences in the form of decreased demand or increased operational costs.

However, these same challenges present opportunities for the Group to mitigate risks and create value through proactive engagement with affected communities. By addressing community concerns and implementing measures to reduce noise, enhance aesthetics and preserve landscapes, the Group can build stronger relationships with residents and stakeholders. This not only reduces the risk of reputational damage but can also enhance Group's position as a responsible, sustainable operator. The trust Group builds through these actions can be translated into financial value, including long-term operational efficiency, stronger community support and potential incentives from local governments. Moreover, investing in sustainability initiatives can lead to cost savings in energy efficiency and waste management, further improving MOTOR OIL Group's financial performance while aligning with evolving regulatory and market demands.

The Group's ongoing commitment to providing affordable energy and ensuring energy security for communities with donations or own operations plays a vital role in promoting social stability, supporting economic growth and enhancing societal well-being - ultimately translating into tangible financial benefits.

Through both its operations and donations, the MOTOR OIL Group contributes to the energy supply that powers vital sectors such as healthcare, education and transportation - critical pillars of local economies. For instance, by providing electricity to hospitals, the Group enhances healthcare delivery and potentially reduce long-term healthcare costs. Supporting educational institutions with technology facilitates a more skilled workforce, contributing to economic growth. In the transportation sector, energy fuels improved efficiency and safety, directly benefiting industries reliant on logistics and infrastructure. These practices foster long-term economic growth and contribute to the creation of jobs, enhancing the Group's financial stability and strengthening its position in the marketplace.

9.2 Impact, risk and opportunity management

9.2.1 Policies related to Affected Communities [S3-1]

Community Contribution Policy

MOTOR OIL Group is committed to supporting the well-being and development of the communities in which it operates. To this end, the Group has established a Community Contribution Policy, ensuring that donations, sponsorships and community programs align with its corporate values and the United Nations Sustainable Development Goals (SDGs). The policy serves as a framework for assessing and implementing voluntary contributions that have a meaningful and lasting impact on society.

The policy ensures that all community contributions align with the Group's strategic priorities, sustainability goals and ethical principles. Contributions may include financial support, in-kind donations, or services to promote specific societal goals, always in accordance with the Group's Code of Ethics and Corporate Responsibility and Sustainable Development Strategy. CEO and Chairman of the BoD is responsible for the implementation of the policy.

In 2024, MOTOR OIL Group contributed nearly 6.3 million euros in donations and sponsorships, benefiting local communities. The Group's contributions are guided by its four Community Contribution Pillars, which focus on areas of significant social importance. These pillars are (1) Arts, Culture, Sports, (2) Environment, (3) Education and Innovation and (4) Local communities and Society and ensure that each initiative supported is strategically selected based on its potential to create positive change and address the needs of society effectively.

To ensure fairness and transparency in the allocation of resources, all requests for contributions must undergo a formal evaluation process. Interested organizations or individuals are required to complete a specific application form, which is then reviewed based on the criteria outlined in the Community Contribution Policy.

The policy should be read in conjunction with the Code of Ethics and Corporate Responsibility that specifically addresses human rights and working practices as well as the sustainability policy that includes MOTOR OIL Group's commitment to ongoing, transparent and meaningful dialogue with stakeholders (including local communities), ensuring that their concerns, expectations and insights are integrated into the company's sustainability strategy and decision-making processes.

Furthermore, the Whistleblowing mechanism of the Group may provide a remedy through a structured process if any human rights wrongdoing is reported.

Group's policies are rooted in internationally recognized standards, ensuring that its business practices align with globally accepted ethical and sustainability principles. The Group upholds the United Nations Universal Declaration of Human Rights, which serves as the foundation for its commitment to human dignity, equality and fair treatment across its workforce and operations. Additionally, as a signatory to the UN Global Compact, the Group integrates its ten principles into corporate governance, covering key areas such as human rights, labor rights, environmental responsibility and anti-corruption measures.

In addition, no cases have been reported on non-respect of the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises that involve affected communities in Group's own operations. Finally, there are no indigenous people as defined by the ESRS in any part of MOTOR OIL Group's operations.

9.2.2 Processes for Engaging with Affected Communities about Impacts [S3-2]

Affected communities' engagement

MOTOR OIL Group maintains open and accessible communication channels with affected communities, even though no material positive or negative impacts have been identified. This proactive approach reflects the Group's commitment to transparency, trust-building and ongoing dialogue with local stakeholders. By keeping these channels active, the Group ensures it remains responsive to community concerns and anticipates potential issues. In that sense MOTOR OIL Group have established multiple processes to engage with them.

Engagement with affected communities may occur directly through the general inquires section on MOTOR OIL's website (moh.gr/general-inquires) where anyone (either a legitimate representative or a credible proxy) has access and may initiate a communication process.

Within the context of Double Materiality Assessment (as described in ESRS-2 IRO-1), the Group has appointed a Third Party to collect insights, analyze stakeholder feedback and ensure a comprehensive and objective representation of stakeholder engagement in the double materiality scoring process.

As part of the community contribution policy, engagement may also occur through the Community Contribution Form where anyone can make a request for support and state the expected results from the contribution. In that sense an active engagement may start with the requestee, as part of the completion process, where specific insights can be gained and in certain circumstances understand how the Group can contribute to mitigate impacts. After evaluation by the Community Contributions Committee, the proposed contributions are submitted to the Chairman and CEO for final approval, ensuring alignment with the Group's values and strategic priorities.

The functions responsible for ensuring engagement with affected communities may fall under the Communication and Public Relations Division, Sustainability Division, Commercial Subsidiaries General Division and Refinery General Division.

Furthermore, the Group has developed a Stakeholder Engagement Plan (SEP) designed to enhance transparency, foster two-way communication and align MOTOR OIL Group with social, environmental and regulatory expectations. The plan involves analyzing the relationship between each stakeholder group and the company, identifying key interaction points, understanding the impacts and interdependencies and recognizing potential conflicts.

Particularly the refinery, has established a procedure for engaging with stakeholders from affected communities. This procedure outlines how MOTOR OIL Group handles communication, promotes information and facilitates feedback and suggestions. The stakeholders are divided into categories, including local government, state bodies, residents, customers, certification bodies, ecological associations, workers' institutions and suppliers.

The relevant department Head evaluates the communication with stakeholders. If the issue is important or requires further investigation, a summary form is filled, and a response letter is prepared in consultation with top management. For less significant matters, the relevant departments provide a response.

For corrective actions, regarding environmental concerns, MOTOR OIL Group outlines the following steps:

1. If the communication relates to a recorded impact, the possibility of non-compliance with environmental management requirements is assessed.
2. If the impact is unrecorded, the issue is reviewed in the Environmental Impact Register.
3. Preventive and corrective actions are then activated.
4. Any identified deviation is integrated into an Environmental Management Program for improvement.

9.2.3 Processes to Remediate Negative Impacts and Channels for Affected Communities to Raise Concerns [S3-3]

During the double materiality assessment process, no negative material impacts have been emerged. The Group supports the availability of channels for stakeholders to raise concerns through several processes. The general approach for providing any kind of remedy is described in the several processes that the Group utilizes for raising concerns or complaints.

For example, in the retail sector a Request and Complaint Management Code has been in place where it describes the:

Methods for submitting customer requests or complaints.

Categorization of requests and complaints based on their subject.

A report recording system with proof of entry (unique reference number).

The process for handling and investigating customer requests and complaints (responsible department, response deadlines, review stages, etc.).

The option for customers to appeal to recognized alternative dispute resolution bodies.

In the Refinery there is a specific process for Handling Complaints that includes the following:

Complaint Submission: Complaints are activated when the customer notifies the refinery and they must provide documentation (e.g., certificates from customs or independent inspectors).

Investigation: The complaint is investigated by the relevant departments and a standardized form is filled out to track the process.

Customer Communication: The customer is updated based on the findings and if technical issues are involved, corrective actions are proposed.

Negotiation: The relevant General Directorate negotiates with the customer for a resolution, which may include compensation or agreement withdrawal if the company is not at fault.

Record Keeping: Complaints are documented for up to five years.

Through the whistleblowing mechanism the Group encourages the submission of confidential or anonymous reports through the existing reporting channels about illegal activities that may take place in the organization. The management and investigation of these reports is conducted objectively, independently and with respect to all implicated parties. The Group assures that those who report through whistleblowing policy channels shall be protected against retaliation, which is expressly stated to be prohibited against the affected persons and that the personal data of all parties involved are protected.

9.2.4 Taking Action on Material Impacts on Affected Communities, and Approaches to Managing Material Risks and Pursuing Material Opportunities related to Affected Communities, and Effectiveness of those Actions [S3-4]

MOTOR OIL Group hence strives to build constructive relationships with the local communities in which it operates, by fostering a relationship based on trust and mutual respect. More specifically, local communities are supported by the Group through programs that enhance economic, social and cultural life and overall help society thrive. The Group makes direct or indirect financial contributions to many businesses and families, while supporting local initiatives and encouraging entrepreneurship, in a general effort to improve the well-being of the communities in which it operates.

The Group's Sustainability Strategy on social welfare addresses both individual needs and societal goals in alignment with the 17 Sustainable Development Goals (SDGs), thereby affirming its commitment to addressing key societal challenges. This commitment is reflected in various initiatives and projects that the Group undertakes, ranging from educational programs, healthcare support, environmental conservation efforts, to cultural and sports sponsorships. The MOTOR OIL Group, through "Frontizo" program, a high-responsibility initiative with actions and projects that impact its world, aims for a better future.

In the realm of education, MOTOR OIL Group, fosters future growth through quality education and STEM training programs. In addition, healthcare is another critical area where MOTOR OIL Group makes significant contributions. The Group supports local public hospitals with donations and organizes health awareness campaigns to promote well-being among community members.

The Group undertakes various environmental conservation projects, such as reforestation, waste management and water preservation of coastal and ocean initiatives. By promoting sustainable practices and raising awareness about environmental issues, the Group aims to protect natural resources and ensure a sustainable future for generations to come.

Cultural and sports sponsorships are integral to the Group's community engagement. MOTOR OIL Group supports local cultural events, festivals and sports activities, which not only enrich the cultural fabric of the community but also promote social cohesion and a sense of belonging among residents. These sponsorships provide opportunities for local talent to be supported and foster a vibrant community spirit.

Moreover, MOTOR OIL Group's efforts to encourage entrepreneurship and digital skills are evident in its support for local startups and small businesses. The Group provides financial assistance, mentorship and networking opportunities to budding entrepreneurs, helping them turn their innovative ideas into successful ventures. This not only stimulates economic growth but also creates job opportunities and drives innovation within the community.

Refinery activities

MOTOR OIL HELLAS S.A. has invested in local communities, supporting organizations through donations, service projects and volunteer efforts for affected communities to maximize positive contributions. Through these investments, the Group enhances community well-being, promotes long-term sustainability and upholds human rights in its operational areas. It should be noted that in 2023, Motor Oil donated the amount of 50 million Euros to the Vardinoyannis Foundation. The Foundation is responsible for the financial management of this amount. Within this context, key initiatives include the donation of modern medical equipment to Corinth Hospital, thereby enhancing local healthcare infrastructure and the provision of a 1,600 m³ desalination unit to Agioi Theodoroi and a 200 m³ unit to Loutraki-Pera Chora to contribute to addressing the issue of water scarcity for local residents. The company has also made fuel donations to schools, fire protection associations and social organizations in municipalities such as Loutraki-Perachora-Agioi Theodoroi and Corinth, supporting critical services for education, emergency response and vulnerable groups.

In addition, MOTOR OIL HELLAS has partnered with the NGO W.I.N. HELLAS to contribute to the protection of women from gender-based violence and promote equal rights within affected communities. The company has fully reconstructed the sole residence on the remote island of Kinaros, ensuring dignified living conditions for the only resident, who faces extreme isolation and limited access to resources. Further initiatives include the donation of more than 24 automated external defibrillators (AEDs) to schools, sports clubs and public spaces to enhance emergency response capabilities and community safety.

The company has also supported bone marrow donor registration campaigns in collaboration with ORAMA ELPIDAS, encouraged community involvement in reforestation efforts in Agioi Theodoroi and constructed fire lookout stations in Sofiko and Chiliomodi in partnership with local fire protection groups to bolster community safety and wildfire prevention. MOTOR OIL HELLAS has made contributions to the national reforestation plan in 2024 (as well as in 2022 & 2023), including investments in forestry seed production facilities to support long-term ecological restoration efforts and the conservation of rare Mediterranean species.

Additionally, the company has advanced social cohesion and inclusivity through the "Painting School Buildings" program in collaboration with UrbanAct, transforming 10 schools in affected areas and the "Ready for Work @ Engineering" program, which provided professional development and mentorship to young women engineers across Greece. MOTOR OIL HELLAS has also strengthened community identity through cultural sponsorships, including support for the Athens Jazz Festival, Megaron Garden Summer Events and the Biennale of Contemporary Ceramics. In the realm of sports, the company has sponsored young athletes, including Olympians, to promote social mobility, youth engagement and equal access to professional development in sports.

Through these diverse initiatives, MOTOR OIL HELLAS continues to engage with local communities in a structured, collaborative manner, assessing needs and co-designing solutions with key stakeholders.

Circular Economy & Alternative Fuels Sector

THALIS ENVIRONMENTAL SERVICES SINGLE MEMBER S.A. has demonstrated a strong commitment to cultural enrichment, education and social welfare through a series of impactful initiatives that support local communities and vulnerable groups. The company has actively contributed to cultural preservation by sponsoring significant events, including the Malevizi Festival, Naoussa Summer Festival and Christmas celebrations in Sitia, all of which enhance local heritage and tourism. Additionally, THALIS has provided financial assistance to vulnerable residents through its support for "Drasi Paggaio Ypostirizo" and extended its aid to children with cancer through a donation to the "ELPIDA" foundation.

In the field of education and awareness, THALIS has played a pivotal role in fostering sustainability-focused programs. The company has actively participated in the 2024 School Recycling Marathon in Heraklion, encouraging young generations to adopt environmentally responsible practices. Furthermore, its engagement in road safety education and contribution to industry discussions on sustainability and the circular economy reflect its broader commitment to knowledge dissemination and environmental stewardship.

PRASINO LADI S.A. has placed a strong emphasis on educating future generations about sustainability and responsible waste management. Through its educational initiative on sustainability and the circular economy, the company has partnered with the Municipality of Athens to reach 200 primary school students and 15 educators. The program has provided participants with a hands-on understanding of the principles of Reduce, Reuse, Recover and Recycle, equipping them with practical skills for environmental conservation.

L.P.C. S.A. has concentrated its efforts on community development in Aspropyrgos by supporting cultural and sports sponsorships, as well as social programs. Through its sponsorship of the Thriasian Cultural Events, the company has reinforced its connection with the local community. Additionally, L.P.C. has contributed to social welfare by donating essential goods to the Social Grocery Store of Aspropyrgos. Recognizing the importance of youth development, LPC has also invested in sports infrastructure by renovating the auxiliary field at Aspropyrgos Stadium, benefiting over 200 young athletes from local sports academies.

Retail activities

AVIN OIL M.A.E. has played a crucial role in supporting vulnerable communities while also promoting sports and sustainability awareness. The company has implemented seasonal initiatives such as "Christmas for All", "Easter for All" and "Smiles for All", through which employees and volunteers have distributed essential supplies, festive gifts and school materials to families in need. These initiatives have provided meaningful assistance to marginalized populations while reinforcing a culture of corporate social responsibility.

Coral has made substantial contributions to education, culture and social welfare through a diverse range of programs and sponsorships. The company has launched "The Love Van Goes to School" initiative, a nationwide volunteer-driven program that has provided meal donations and community engagement in 30 municipalities. Additionally, Coral has acted as a major sponsor of the Cycladic Kids Festival at the Museum of Cycladic Art, an event that attracted thousands of participants and provided cultural and artistic experiences to children and families.

NRG has been an active proponent of arts, culture and sports while maintaining a strong commitment to social welfare. Through its sponsorship of the Fly Athens Pole Vault event, the company has supported an international sporting competition that brings together top athletes. NRG has also extended its support to disabled athletes by funding the EY ZIN Sports Club, facilitating inclusive sporting opportunities. In alignment with its commitment to environmental consciousness, NRG has funded climate awareness initiatives, including a swimming challenge undertaken by Spyros Chrysikopoulos, aimed at drawing attention to climate change and pollution.

Renewable Energy Sources activities

MORE has prioritized renewable energy education to foster awareness and innovation among young students. The company has launched an interactive STEM-based educational initiative on renewable energy sources, which has been implemented in 40 primary and secondary schools across Evia, Kozani and Monemvasia. Engaging approximately 2,400 students, the program has provided hands-on learning experiences designed to enhance understanding of sustainability and clean energy solutions. Through activities that encourage the exploration of renewable energy applications, students have gained valuable insights into how clean energy technologies contribute to environmental preservation and economic sustainability. By integrating STEM-based learning, MORE enhanced students' understanding of renewable energy, inspiring the next generation to embrace sustainable practices and contribute to the global energy transition.

Mitigation actions

The Group has implemented mitigation measures to address the environmental and social impacts of its industrial operations. Noise mitigation measures include the installation of sound barriers and noise-dampening equipment, as well as scheduled maintenance programs to minimize disturbances. Additionally, operational protocols limit high-noise activities to designated timeframes, ensuring compliance with noise control regulations.

To reduce the visual impact of industrial infrastructure, the Group integrates environmental and aesthetic design principles into its projects. This includes green buffers, landscaping initiatives and architectural modifications that blend industrial sites into the surrounding environment. Measures such as vegetation barriers and color harmonization are incorporated to minimize the visual footprint of facilities.

A key aspect of the Group's mitigation actions is sustainable land management, ensuring that industrial developments minimize ecosystem disruption. Environmental Impact Assessments (EIAs) are conducted prior to new projects, incorporating biodiversity preservation measures and cultural heritage protection. Engaging with stakeholders is fundamental to the Group's approach.

Structured consultations, community dialogue sessions and engagement mechanisms (as described above) ensure that local concerns are addressed proactively. Additionally, the Group invests in corporate responsibility initiatives, including infrastructure improvements that enhance community resilience and well-being.

Furthermore, the Group is collaborating with a third-party organization to develop a comprehensive Social Return on Investment (SROI) methodology. This initiative aims to enhance the accuracy and effectiveness of assessing the impact of its programs. By implementing this methodology, the Group will be able to measure and understand the social, environmental and economic value created through its initiatives, ensuring a more transparent and informed approach to its community engagement efforts.

Lastly, no severe human rights issues or incidents related to affected communities have been reported through the Whistleblowing communication channels.

Refinery activities

At the refinery level, mitigation efforts focus on site-specific impacts, particularly related to noise, visual disturbances and community concerns. MOTOR OIL HELLAS S.A. has established a formal complaints management procedure to handle environmental grievances from residents, ensuring a structured and transparent resolution process. Complaints related to noise and other disturbances can be received through telephone through the call center of from Refinery's Central Portal and recorded by designated gatekeepers and escalated to an environmental engineer, who assesses the issue and, when necessary, conducts on-site inspections to evaluate the situation firsthand. This hands-on approach enables MOTOR OIL HELLAS S.A. to identify patterns, assess risks and implement appropriate corrective actions. The Head of the Environmental Section is then informed and provides recommendations to senior management, ensuring that necessary measures are taken to mitigate the impact on the community.

Once an issue has been assessed, senior management oversees the implementation of corrective actions, allocating the necessary resources to ensure effective resolution. Additionally, the continuous monitoring and refinement of mitigation measures ensure compliance with regulatory requirements and sustainability commitments, strengthening the company's long-term environmental and social performance.

Circular Economy & Alternative Fuels activities

THALIS has proposed three environmental research projects in partnership with research organizations and universities. These include the WASTEMILL project, which focuses on developing a system to process and utilize organic waste fractions, the MAESTRO project, which aims to design a biorefinery for advanced biofuel production and improve upgrading units for sustainable energy solutions and the "YDRAERIO" project, which focuses on co-gasifying upgraded waste materials with pruning residues to enhance energy recovery and support circular economy initiatives. A pilot plant for this project will be established at the Waste Treatment Unit of Amari.

To support communities impacted by environmental degradation, THALIS has sponsored coastal cleanup efforts at Analouka Beach, contributing to the restoration of marine ecosystems that may be affected by industrial pollution. Additionally, the company has provided fuel donations to the Municipality of Amari, Crete, to support emergency response efforts following wildfires, which can be exacerbated by climate change linked to fossil fuel emissions.

L.P.C. has been engaged in marine conservation efforts that indirectly address the consequences of oil and gas sector activities on coastal communities. By providing in-kind sponsorships of lubricants to marine ecology organizations and local fishermen's associations, L.P.C. has supported sustainable marine practices. These efforts help mitigate the impact of industrial pollution on marine biodiversity and coastal livelihoods, ensuring that affected communities maintain access to clean water and healthy fisheries.

PRASINO LADI has actively promoted alternative fuels as a means of reducing the environmental footprint of the oil and gas sector. The company has prioritized the collection and recycling of used cooking oil, converting it into biodiesel as part of its broader strategy to advance cleaner fuel alternatives. By doing so, PRASINO LADI contributes to reducing air pollution and carbon emissions that negatively impact communities living near refineries and transportation corridors.

Retail activities

AVIN OIL has implemented initiatives that contribute to environmental restoration and community well-being, specifically addressing some of the adverse effects of the oil and gas industry. Through Project PARALIES, the company has taken responsibility for a section of Schinias Beach, working to mitigate pollution and marine debris accumulation. By actively collecting and recycling waste into upcycled products, AVIN has contributed to reducing environmental degradation, which can be exacerbated by industrial activities and oil-related waste.

NRG has undertaken a long-term environmental rehabilitation effort to restore natural ecosystems affected by industrial pollution and climate change. The "YMoto Energy for the Care of Hymettus" initiative has involved the planting of 500 trees, with future commitments to mountain cleanups and the watering of 5,000 trees in collaboration with Let's Do It Greece. This initiative serves as a means of counteracting land degradation, which can be intensified by fossil fuel-related emissions and deforestation linked to industrial expansion.

Coral has integrated sustainable mobility and energy efficiency as part of its broader strategy. By sponsoring the Shell Eco-Marathon, the company has supported the research and development of energy-efficient vehicles, which contribute to lower fuel consumption and emissions. Additionally, its ongoing Safe Driving School initiative has helped raise awareness about responsible driving behaviors that reduce fuel use, thereby lessening the overall environmental footprint of transportation-related emissions in affected communities.

Renewable Energy Sources activities

MORE has taken an active role in mitigating the long-term effects of fossil fuel dependency through renewable energy education. By implementing a hands-on learning initiative, the company has provided students with the opportunity to construct solar-powered vehicles and wind generators, fostering practical knowledge of clean energy technologies. This program equips young individuals with the skills and awareness necessary to support the transition toward renewable energy, ultimately reducing reliance on traditional fossil fuels.

9.2.5 Targets related to Managing Material Negative Impacts, Advancing Positive Impacts, and Managing Material Risks and Opportunities [S3-5]

MOTOR OIL Group is committed to establishing clear, measurable targets aimed at improving the well-being and resilience of communities affected by its operations. While the Group has not set specific targets directly related to affected communities the effectiveness of these actions is monitored and reviewed annually through the Community Contribution Policy, which defines a quantitative indicator - specifying the percentage of EBITDA each company must allocate for community initiatives.

Although, the commitment of the Group to improving the well-being of the communities is evident, Group has not yet set specific targets due to being in the process of refining the Community Contribution framework. The Community Contribution Committee reports to the Sustainability Committee on the amount of the contribution made by the Group in the previous year together with the number of requests.

10 CONSUMERS AND END USERS [S4]

10.1 Strategy

10.1.1 Material Impacts, Risks and Opportunities and their interaction with Strategy and Business Model [S4.SBM-3]

MOTOR OIL Group operates across a diverse range of business activities, serving both businesses and end consumers through its extensive value chain (please refer to 1.4.2 Group Structure paragraph "Value Chain").

The Group's operations include refining, storage, distribution and marketing of petrochemical products - such as fuels and lubricants - while also offering electricity and natural gas sales, electromobility solutions, circular economy & alternative fuels and renewable energy. Within its Retail segment, the Group serves a broad spectrum of consumers, offering products - such as fuels, lubricants and LPG - as well as energy-related services such as electricity and gas supply. These activities position the Group as a key player in meeting the energy needs of individuals, businesses and industries, ensuring that its products and services are accessible, safe and aligned with evolving consumer expectations and respective regulations.

MOTOR OIL Group recognizes that consumers and end-users are key groups of affected stakeholders (further analysis regarding the stakeholders can be found in sub-Chapter: Interests and views of stakeholders [SBM-2]) and their interests, views and rights, including the respect for human rights (please refer to the Code of Ethics and Corporate Responsibility on the respect for human rights) are integral to shaping the company's strategy and business model. MOTOR OIL Group engages with them through structured dialogues, loyalty programs and feedback mechanisms (Questionnaires).

In the retail segment, the following types of consumers and end-users fall within the scope of the Group's quality process of products and services:

1. **Fuel Station Owners:** One key group is fuel station owners, who rely on the consistent quality of fuels and services to operate their stations and serve their customers effectively
2. **Industrial Clients:** Companies and organizations that procure fuels and other products for their industrial production, being affected by the quality processes applied at all stages of production and delivery.
3. **End Customers/Consumers:** Individuals or households who purchase fuels, non-fuel offerings, which include coffee products, mini-markets, car accessories, lubricants and services from fuel stations.
4. **Customers Purchasing Heating Oil:** Consumers who buy heating oil, relying on the quality and reliability of the products for their heating needs.
5. **Electricity Consumers:** Households and businesses supplied with electricity, depending on the reliability and efficiency of the energy services provided.

Recognizing the importance of consumer protection, product safety and regulatory compliance, MOTOR OIL Group adheres to European legislation on product labeling (CLP Regulation (EC) No 1272/2008). Retail companies ensure that all necessary classifications and product information are clearly communicated to consumers. These efforts support informed decision-making and strengthen public confidence in the Group's products.

To maintain high-quality standards and prevent the distribution of substandard products, the refinery and retail companies implement appropriate quality control measures. These controls are essential in ensuring safer product use, reducing potential health risks and reinforcing consumer trust. Beyond direct costumers, quality assurance processes reinforce transparency and credibility, upholding high standards that enhance trust and reliability for business partners and suppliers across the Group's value chain. By embedding these controls into its operations, the Group reinforces its reputation as a responsible and consumer-focused organization, committed to delivering safe, high-quality and sustainable energy solutions.

Based on the outcomes of the Double Materiality Assessment (DMA) (Chapter from ESRS 2: Impact, risk and opportunity management), the analysis indicates that there are no material impacts (or risks) on consumers or end-users.

Opportunities

MOTOR OIL Group recognizes that maintaining high product quality and safety standards presents a material opportunity to enhance consumer trust and strengthen its market position. This opportunity relates to all consumers and end users of the Group. By implementing appropriate quality control measures (e.g. provision of material safety data sheets, compliance with all mandatory regulations, appropriate packaging and labeling of products that provides advice on their safe storage, use and disposal) the Group can proactively prevent financial losses associated with product recalls, legal liabilities and potential reputational damage. These efforts contribute to a more resilient business model, reducing operational risks while maintaining trusted relationships with consumers, business partners and regulatory authorities. Given the immediate impact of quality assurance measures, this opportunity is classified within a short-term time frame, allowing for quick adaptation and measurable improvements in operational performance.

Beyond risk mitigation, a quality assurance framework (e.g. ISO 9001:2015, ISO 17025:2017) serves as a competitive advantage, driving consumer preference and brand loyalty. Since there is a clear dependency on consumers, enhanced product safety and reliability can lead to higher customer satisfaction, increased sales growth and expanded market share by consistently delivering high-quality, safe and compliant products. In the short term, these initiatives enable the Group to respond swiftly to market demands and regulatory requirements, ensuring immediate value creation while laying the groundwork for sustained consumer trust.

10.2 Personal safety of consumers and/or end-users | Policies, actions and targets

10.2.1 Policies and Actions related to Consumers and End-Users [S4-1] [S4-4]

MOTOR OIL Group integrates consumer safety, product quality and regulatory compliance across all aspects of its operations, ensuring high safety standards throughout its value chain. These principles are embedded in its Policies & Commitments with regards to Quality, which establishes a structured framework applied to production, distribution and customer interactions. Examples of these policies are the Quality Policy of MOTOR OIL and the Product Stewardship Policy of Coral. These are available upon request by the customer/end user. It should be noted though, that the ISO related to quality are available through the websites of Group's companies.

A key element in maintaining these high standards is the ISO 9001:2015-certified Quality Management System (QMS). Senior management oversees its implementation, setting measurable objectives and conducting regular performance reviews to drive continuous improvement. The report will be centrally managed, with support from the Customer Service Center (CSC) Manager.

By aligning with international safety standards (e.g. 14001:2015, 45001:2018, 50001:2018, 9001:2015) and best industry practices, the Group reinforces its commitment to consumer well-being and product integrity. Beyond product quality, MOTOR OIL Group prioritizes transparent customer feedback management through its various Customer Complaints Policies and processes (e.g. Customer Complaints Policy & Procedures, Customer complaints processes in the Refinery, code for the management of requests and complaints for electricity customers). These policies ensure a structured, proactive approach to addressing customer concerns, driving service enhancements and implementing corrective actions based on consumer insights. The complaint policy is organized into two main cycles: the complaint logging and resolution cycle and the complaint analysis and learning cycle. In the complaint logging and resolution cycle, when a customer expresses dissatisfaction with the product or service received (from email, call center or social media) the complaint is captured, preferably through an automated system. The issue is then resolved within 5 calendar days and the resolution is communicated back to the customer.

In the complaint analysis and learning cycle, complaints are reported on, a monthly basis. An in-depth analysis is conducted to determine the root causes of the complaints received. Based on this analysis, corrective actions are implemented to prevent the issue from recurring and the insights gained are captured. These learnings are then shared within the organization to drive continuous improvement.

Systematic monitoring and analysis of feedback allow the Group to continuously refine its services and maintain high levels of customer satisfaction. One of the commitments of the Quality Policy of MOTOR OIL, is to understand the needs and expectations of its customers and of any interested party and respond promptly to the requirements of its customers as well as to meet the commitments and obligations of the Group, as identified by the relevant contractual agreements. Furthermore, MOTOR OIL, through constant communication with its customers and end users (Chapter (ESRS 2): Interests and views of stakeholders [SBM-2]) and the relevant to customers concerns, takes into consideration their views in drafting the relevant policies. With regards to the Customers Complaints policies and procedures, these available upon request or provided directly through the websites of the relevant companies.

Health & Safety Regulations are applied. Retail companies, through ISO 45001:2018 certifications, systematically assess health and safety (H&S) risks, impacts and controls, continuously updating its H&S Risk and Controls Assessment. Staff and contractors are encouraged to report actual and potential incidents through dedicated web-based platform, with all safety committee reports, peer reviews, internal audits and customer service findings recorded for ongoing monitoring and reassessment.

To reinforce responsible business conduct, MOTOR OIL Group upholds a Regulatory Framework Violation Reporting Policy ("Whistleblowing Policy"), allowing employees, customers and business partners to report regulatory violations confidentially and without fear of retaliation. This aligns with the Group's Code of Ethics and Corporate Responsibility, ensuring adherence to ethical business practices and respect for internationally recognized human rights (for detailed analysis of these policies, refer to chapter Working conditions | Policies and actions [S1-1] [S1-4]).

Ensuring consumer trust through quality control, the Group utilizes specialized laboratories and mobile quality control units for product inspections. These labs support refinery, port and tanker loading operations by conducting extensive tests on incoming crude oil, chemicals and additives, as well as final products before distribution. Monthly lab tests ensure both product excellence and safe distribution, minimizing potential risks to human health and the environment. This process is taking place in the whole value chain (upstream, own operations and downstream) and across all geographies where the group operates. Stakeholders that are affected include consumer and end users, as well as Business partners. The resources that are used by the Group include mainly personnel from quality departments.

Retail activities

AVIN OIL aims to foster trust and assurance for the customer in each of its service stations throughout Greece. The company has created a Quality & Quantitative Control Department as well as the program «AVIN Quality Assurance» to ensure the quality of AVIN OIL fuel. In summary, the program includes:

1. **Fuel Pump Quality Control:** Samples are taken from all pump nozzles of each service station and quality control is performed on each product. The characteristics that are checked are: specific gravity, appearance, color and clarity, control for moisture or particles or foreign impurities / substances, state tracers and control of gasoline with a portable «Octanemeter» Mid-IR, which shows the number of Octane (RON) as well as for the detection of other chemicals in gasoline.
2. **Quantitative Control of Fuel Pumps:** The quantity received by the consumer is important to be correct in each supply. AVIN OIL technicians test the pumps with accredited 20-liter measuring containers and confirm that the pumps deliver the right amount, at each refueling. In parallel with the control of pumps, the good operation of the liter meters of the gas stations is checked daily, so that the staff can correctly measure the pumps of the service station.
3. **Proper Sealing of Fuel Pumps:** Fuel pumps are adjusted and sealed appropriately. AVIN OIL technicians confirm that the sealing of the pumps is appropriate in accordance with the national legislative framework and that no pump has been tampered with.
4. **Technical Inspection of Wells, Tanks and Quality Inspection of Products in Fuel Tanks:** The condition of gas station equipment (tanks, wells) is inspected monthly, including product quality control (e.g. detection of water, particles and foreign substances). This ensures that the correct storage and handling practices at AVIN OIL stations are always followed. and certified by BUREAU VERITAS, an independent, internationally, recognized, quality certification body.

Coral has implemented quality management processes across all its activities in compliance with the ISO 9001:2015 standard. It also ensures quality control for the products and services offered, as well as operational safety at its network of owned fuel stations, particularly at highway stations (SEAs), through a certified Quality Management System by TUV Austria. Additionally, the company maintains a certified Quality Management System by Bureau Veritas Certification (BV Cert.) for the entire supply chain, including receiving, storage, mixing, loading of transport vehicles and the delivery of petroleum, lubricants and chemicals to customers. Furthermore, it monitors and evaluates the effectiveness of its actions through a comprehensive system for the quantitative and qualitative control of fuels throughout transportation and storage. Customer satisfaction is tracked through regular surveys and feedback, which help identify areas for improvement. The company also monitors sales and usage data to assess product and service success, while evaluating the quality of service provided at fuel stations and other points of sale. Adhering to strict quality, health, safety and environmental standards, Coral maintains relevant ISO certifications (e.g.14001:2015, 45001:2018, 50001:2018, 9001:2015). Furthermore, it continuously invests in upgrading operations and equipment to enhance service delivery and minimize environmental impact.

LPC abides with the relevant European legislation (CLP Regulation (EC) No 1272/2008) placing the necessary information and classifications on all product labels as well as publishing online all Market Safety Data Sheets of products. Furthermore, with the ''Lab Project'' LPC successfully monitors the sampling of packaged products, printing barcode labels for samples, recording chemistry analysis results and implementing corrective actions. A mobile application is utilized to support field usage decisions, with the added functionality of photo capture for documentation purposes.

No severe human rights issues or incidents connected to consumers and end-users have been identified within the reporting period through the whistleblowing communication channels. Through the Code of Ethics and Corporate Responsibility which applies in both own workforce and third parties, is stated that Group respects and supports internationally recognised human rights. The Group, within its sphere of influence, supports and respects the protection of human rights and ensures that any type of violation or infringement thereof is avoided.

10.2.2 Processes for Engaging with Consumers and End-Users about Impacts [S4-2]

Engagement with consumers and end users may occur directly through the general inquires section of MOTOR OIL Group's website, where anyone (either a legitimate representative or a credible proxy) has access and may initiate a communication process. General inquiries sections are also available on the websites of its retail companies. Through this channel, the communication can be directed towards several internal functions. Accordingly, the Relevant department, is responsible for overseeing this process.

Furthermore, the Group has developed a Stakeholder Engagement Plan (SEP) designed to enhance transparency, foster two-way communication and align MOTOR OIL with social, environmental and regulatory expectations. The plan involves analyzing the relationship between each stakeholder group and the Group, identifying key interaction points, understanding the impacts and interdependencies and recognizing potential conflicts. The sustainability Committee is responsible for overseeing the process.

In MOTOR OIL Group, customer's needs are priority, providing them with a notable customer service experience. MOTOR OIL's refinery has established an assessment process of the customer service provided, in order, to promptly identify any wrong acts and consequently, improve its performance and ensure clients' satisfaction.

Under this framework, the Group:

Conducts quantitative & qualitative customer satisfaction surveys

Identifies and evaluates its strengths and weaknesses

Manages the identified flaws

Improves its tactics and performance

This whole process aims to the minimization of complaints relevant to MOTOR OIL Group's products. The General Directorate of Supply & Trading is responsible for overseeing the process. An indicative example with regards to the customer service approach comes from Group's subsidiary NRG:

NRG Customer Experience (CXP) consists of Customer Support, Digital Channels (e.g. chat, email handling) and Complaints Management (e.g. written complaints).

NRG CXP aims at:

1. Mapping customer journeys, analyzing information concerning customer insights and expectations to identify opportunities to proactively amend and enhance current processes.
2. Ensuring that each touchpoint across the customer journey is engaging, efficient, effective and provides consistent cxp.
3. Ensigning actions, customer moments, targeting to increase customer satisfaction rates, customer loyalty and retention and to reduce churn. Systematically monitors process enhancements.
4. Cascading the agreed customer experience strategy across all company touchpoints.
5. Monitoring KPIs progress and productively utilizes all available resources.
6. Analyzing quantitative and qualitative results, drive conclusions, design roadmap of actions to meet customers' expectations.
7. Defining and driving adoption of best practices around customer engagement in energy industry.

Some extra landmarks:

Loyalty scheme for customers via NRG all smart since 2019 and other loyalty schemes (health card, gift card).

Quality Assurance Specialist since 2020 in order, to evaluate Agents' calls.

Member of Hellenic Institute of Customer Service since 2019.

IVR customer survey since 2021 via 18101.

"MYnrg" application to easily access and manage data and information regarding meters, payments and invoices.

Various payment methods to facilitate customers' payments.

Furthermore, the companies in the retail sector engage with customers through market surveys. Indicatively, AVIN OIL for 2024 conducted the following surveys:

Markets surveys for AVIN OIL during 2024

Type of Survey	Purpose	**Responders** (n)
2024, Brand Tracker, Focus Bari, Quantitative (2 waves)	Monitor Brand Health KPIs	1,000
2024, Mystery Motorist Program (3 waves)	To evaluate and grade network sites	270 sites

10.2.3 Processes to Remediate Negative Impacts and Channels for Consumers and End-Users to Raise Concerns [S4-3]

MOTOR OIL Group is committed to maintaining transparent, efficient and accessible communication channels for consumers and end-users, ensuring that they can voice concerns, submit complaints and receive timely resolutions. The Group has established a structured and systematic complaint management framework, designed to align with international best practices and regulatory requirements, reinforcing its customer-centric approach.

Consumers and end-users of MOTOR OIL Group's retail companies can submit complaints through multiple communication channels, including:

Telephone support, offering direct and immediate assistance.

Email submissions, ensuring documented and trackable communication.

Social media platforms (e.g., Facebook, CoralNet), enhancing accessibility and responsiveness.

Voice of the Customer (VOC) platforms, providing structured feedback mechanisms.

All complaints are logged into the Salesforce system, ensuring centralized documentation and efficient tracking. They are then directed to the appropriate department for assessment and resolution. Quality and quantity-related complaints undergo additional review by specialized teams, including quality control officers, inspectors and operations managers, ensuring accurate evaluation and fair resolution.

To enhance transparency and accountability, a structured monthly reporting process is followed, which includes:

1. Analysis of complaints received, allowing trend identification and continuous improvement.
2. Monitoring unresolved complaints, ensuring that no issue remains unaddressed.
3. Year-to-date statistical reports, providing insights into consumer concerns and operational enhancements.

Additionally, as part of its Consumer Complaints Policy, the Group implements measures to proactively engage with consumers throughout the resolution process. Customers receive timely updates regarding the status of their complaint, the investigation process and expected resolution timelines.

Furthermore, the Group has established procedures for handling complaints related to product quality, delivery and service performance. Special attention is given to customer complaints concerning the Chemistry Department, which adheres to ISO/IEC 17025:2017 standards to ensure the reliability and accuracy of laboratory analyses. This approach underscores the Group's commitment to continuous improvement, regulatory compliance and consumer protection across all its business segments.

MOTOR OIL Group also assesses whether consumers and end-users are aware of and trust these reporting structures. This is achieved through surveys, feedback mechanisms and direct stakeholder engagement sessions. The insights gathered help refine Group's approach, ensuring that individuals feel confident using these channels to communicate their concerns.

Furthermore, the Group has policies in place to protect individuals from any form of retaliation when utilizing these channels (please refer to the Chapter, "Processes to remediate negative impacts and channels for affected communities to raise concerns [S3-3]" for additional information regarding for additional information on the channels to raise concerns).

MOTOR OIL Group's non-retaliation approach guarantees that all reports are handled impartially and that those who raise concerns are safeguarded against any adverse actions. This commitment fosters an environment of trust, encouraging proactive communication and ethical business conduct. By maintaining multiple, well-defined complaint resolution channels and continuously refining its processes, MOTOR OIL Group reinforces its commitment to consumer protection, transparency and service excellence across all its business segments.

Below there is an example of a structured complaint resolution framework in the retail sector:

NRG applies a structured complaint resolution framework aligned with the regulatory requirements of the Electricity Supply Code (ΦΕΚ Β' 832/9.4.2013), which outlines:

Various complaint submission methods, including online forms, telephone support and written correspondence.

Complaint categorization and tracking, ensuring efficient issue resolution.

Defined response timelines and escalation procedures, ensuring prompt handling and regulatory compliance.

Alternative dispute resolution mechanisms, including referral to independent authorities such as the Regulatory Authority for Energy (RAE) and the Consumer Ombudsman.

10.2.4 Targets related to Managing Material Negative Impacts, Advancing Positive Impacts, and Managing Material Risks and Opportunities [S4-5]

MOTOR OIL Group is committed to supporting the transition to sustainable mobility by significantly expanding its electromobility infrastructure, aiming to install over 4,000 charging points by 2030 (from ~1,550 in the H1 2024) aligning with Group's Strategy outlook. The methodologies used for setting the targets included scenarios and data sources such as EV adoption trends, charging demand (market growth), national targets under the National Energy and Climate Plan (NECP) and geographic factors, with assumptions about government incentives and regulation, advancements in EV technology and infrastructure availability. Various stakeholders, including industry experts, local authorities, consumer groups and retail networks were consulted to ensure the target is aligned with the demand. Progress is tracked through metrics like the number of charging points installed annually (1,629 charging points in 2024).

Consumer engagement was carried out through feedback surveys. This initiative is designed to meet the growing demand for electric vehicle (EV) charging solutions, ensuring greater accessibility and convenience for consumers and end-users. Through its subsidiaries, including NRG, AVIN OIL and CORAL, the Group is developing a reliable and efficient charging network, catering to both private consumers and commercial fleets. In future reporting periods, the Group intends to examine establishing more specific targets related to the topic.

11 BUSINESS CONDUCT [G1]

11.1 Governance

11.1.1 The Role of the Administrative, Management and Supervisory Bodies [ESRS 2 GOV-1]

MOTOR OIL Group's governance structure is designed to uphold integrity, transparency and accountability in all aspects of business conduct. The Board of Directors plays a pivotal role in defining the Group's values and strategic direction while ensuring compliance with legal, regulatory and corporate governance standards. As part of this commitment, the Group adheres to the Hellenic Corporate Governance Code, implementing its principles through a "comply or explain" approach and providing explanations when deviations occur.

The Board operates under a well-defined Charter and oversees key areas such as shareholder rights, decision-making transparency, risk management and personnel policies. Additionally, the Sustainability Committee, functioning under the highest governance body, is responsible for shaping and monitoring the Group's Sustainability Policy and Strategy. With regular training on sustainability and corporate governance matters, the Committee ensures that the Board remains informed and equipped to address emerging risks and opportunities. Through these governance mechanisms, MOTOR OIL Group fosters responsible business conduct, reinforcing its commitment to ethical leadership and long-term sustainable growth.

The supervisory, management and administrative bodies involved with business conduct matters are the following:

Supervisory bodies: Board of Directors (BoD) and Sustainability Committee

Management Bodies: Chief Executive Officer (CEO) and Deputy CEOs

Administrative Bodies: Reports Management Committee (R.M.C), HR General Division – HR Dept, Head of Legal Dept, Compliance Unit, Internal Audit Unit

Their roles are described in the following sections: Chapter "Business conduct policies and corporate culture [G1-1]" and Chapter "Prevention and detection of corruption and bribery [G1-3]".

This chapter should be read in conjunction with ESRS 2 GOV-1 and Chapter "Prevention and detection of corruption and bribery [G1-3]". For additional information regarding the Committees and the expertise of the management and supervisory bodies on business conduct matters, please refer to Chapter "Corporate Governance Statement (L.4548/2018), The Charter of the Company's Board of Directors, Director's Suitability Policy and the Operating Regulations. Furthermore, reference should be made to the Remuneration & Nomination Committee where among its main responsibilities is to identify suitable candidates to become Directors, as well as to propose candidates to fill vacancies on the Board or its committees and to evaluate periodically the membership headcount and composition of the Board and its committees.

11.2 Strategy

11.2.1 Material Impacts, Risks and Opportunities

MOTOR OIL Group places anti-corruption and ethical business practices at the core of its operations, recognizing the immediate financial and reputational consequences of bribery and fraud. Legal penalties, loss of business contracts and diminished stakeholder confidence can directly impact profitability, making compliance a strategic necessity. Thus, beyond regulatory compliance, supplier governance plays a crucial role in maintaining financial and operational stability.

By ensuring structured oversight and transparency across its supply chain, MOTOR OIL Group reduces exposure to regulatory fines, legal liabilities and reputational damage. This approach not only ensures seamless business continuity but also fosters trust among stakeholders, reinforcing the company's resilience in an evolving market.

Furthermore, the Group's Whistleblowing Policy enhances corporate resilience, acting as a proactive measure to prevent fraud and reinforce ethical responsibility. Providing employees and stakeholders with a structured mechanism to report concerns minimizes the likelihood of costly legal actions while strengthening internal accountability. Over the mid-term, such initiatives contribute to a corporate culture of transparency, attracting investors who prioritize governance excellence and employees who seek a workplace built on integrity.

However, ethical business conduct is not just about mitigating risks - it is also a source of strategic advantage. MOTOR OIL Group's integrated compliance frameworks, which include stringent anti-corruption measures, supplier governance and whistleblower protections, do more than ensure adherence to legal requirements. They create a foundation for long-term resilience, enhancing the company's reputation as a trusted industry leader while reinforcing its commitment to responsible business practices.

11.3 Impact, risk and opportunity management

11.3.1 Business Conduct Policies and Corporate Culture [G1-1]

Upholding the highest ethical standards is essential to maintaining trust with MOTOR OIL Group's stakeholders and ensuring sustainable business growth. To this end, the Group has established a comprehensive framework of policies and procedures that reinforce responsible business conduct and regulatory compliance. These include among others,

Code of Ethics and Corporate Responsibility

Anti-Bribery and Anti-Corruption Policy

Policy against violence and Harassment at work

Whistleblowing Policy

Corporate Governance Code

The Code of Ethics and Corporate Responsibility aims to contribute to the further promotion of moral integrity, honesty, transparency, as well as proper professional behavior at all levels of the Group's hierarchy, so on the one hand, it orderly operation is preserved and on the other hand, the proper management of MOTOR OIL Group's business activities in the best interests of its employees, customers and shareholders is ensured. The Code is addressed to all employees and teams of the Group Companies as well as to any third parties or business partners who represent any Group or work on their behalf. It is applied in conjunction with legal and regulatory requirements as well as other approved policies and procedures of the Group. In absolute compliance with the Code of Ethics and Corporate Responsibility, the Group operates a corporate governance code which involves a set of relationships among a Group's management, its shareholders, employees and other stakeholders; and aims to create, sustain and develop strong and competitive companies.

Furthermore, the Group's parent company and its significant subsidiaries, according to Greek Law 4706/2020, as in force, have established their own Operating Regulations, which describe the organizational structure of the relevant Company as well as the scope of its divisions and include the policies and procedures, which are mandatory content under the current regulatory framework. Among others, the Operating Regulations include Compliance and Training Policies. According to these the Group organizes compliance training programs/awareness sessions which are monitored,

planned and executed by the Human Resources General Division, while the Compliance Unit provides, if requested, support and guidance. Furthermore, the Compliance Unit carries out trainings/updates to the members of the Board of Directors and its Committees as well as to the persons discharging managerial responsibilities regarding their duties and responsibilities mainly regarding regulatory compliance and corporate governance issues.

Regarding compliance, the Group has established an independent Compliance Unit since 2022. During the reporting period, the Compliance Unit strengthened its operation and efficiency and guided the ongoing effort of the assurance of the Group compliance and the promotion of business conduct and corporate culture.

In compliance with EU Directive 2019/1937 and Greek Law 4990/2022, as in force, each Group company, that is obliged, appointed an Officer Responsible for the Receipt and Monitoring of Reports (ORRMR) in 2023 to independently manage investigations and report directly to the Board of Directors. The Group encourages employees and stakeholders to submit confidential or anonymous reports, ensuring protection from retaliation and data privacy in line with ethical governance.

More specifically the mechanism for identifying, reporting and investigating concerns about unlawful behavior is described in both the Whistleblowing policy and the code of ethics and corporate responsibility of the group which interact. In the event of indications of policy violations, employees must promptly inform the Investigation Team, following the guidelines outlined in the Whistleblowing Policy. All reports will be thoroughly reviewed, and corrective and remedial actions will be taken as needed. Reports can be made anonymously and individuals who report violations are protected from any potential retaliation.

The Group encourages the submission of confidential or anonymous reports through the existing reporting channels about illegal activities that may take place in the organization. The management and investigation of these reports is conducted objectively, independently and with respect to all implicated parties. The Group is committed that employees who have made a report will not suffer retaliation, harassment or marginalization, intimidation or threats and unfair treatment because of their report, (e.g. exclusion from training courses, non-approval of expenses, denial of leave, unfounded negative evaluation, etc.). Also, unjustified changes in the employment relationship because of the report are not allowed. In the case of a malicious report, the above protection does not apply. The same level of protection also applies to third persons connected to the Reporting Persons who could be retaliated against in a work context, such as colleagues or relatives of the Reporting Persons. Where the Reporting Persons is an external contractor, early termination, or cancellation of a contract for goods or services because of the report is not permitted.

The Group has established multiple reporting channels. Any employee, external partner or other person falling within the scope of the Whistleblowing Policy as well as the Policy against Violence and Harassment at Work suspecting that a wrongdoing (as mentioned at the above Policies) is occurring may contact the Officer Responsible for the Receipt and Monitoring of Reports (ORRMR) or the Compliance Officer (for the Group companies that have not designated an ORRMR) and in any case to communicate by name or anonymously through the following communication channels:

Whistleblowing Platform: whistleblowing.moh.gr

Written report - Letter marked "attention of the ORRMR or of the Compliance Officer (for Group companies that have not appointed an ORRMR)" or "Reference of Law 4808/2021 or Law 4990/2022" to the address: Irodou Attikou 12^{A}, 151 24, Marousi, Greece

Personal meeting with the ORRMR or with the Compliance Officer (for Group companies that have not appointed an ORRMR) upon submission of a request in writing or orally or via email to the ORRMR or the Compliance Officer respectively.

Furthermore, if a whistleblowing report is received by an unauthorized person, they are obliged to forward it to the ORRMR immediately, without any modification of its content or disclosure of information that may lead to the identification of the whistleblower, or any third party named in the report, in compliance with the provisions of Law 4990/2022. In 2024, no whistleblowing reports have been submitted.

In NRG, for customer concerns, specific grievance processes have been implemented, such as the "Requests & Complaints Management Code," which outlines submission methods, classification of complaints, response timelines and escalation options to out-of-court dispute resolution bodies. This comprehensive framework ensures a safe, transparent environment for raising concerns without fear of retaliation.

The HR Department, in collaboration with the Human Resources General Division, is responsible for ensuring that Group employees are informed and trained on its contents. This is achieved through various communication channels, including information materials, emails, newsletters and other suitable methods based on employee categories. The Policy is also prominently displayed on the Group's intranet and online reporting platform. Furthermore, awareness initiatives may be shared with relevant stakeholders - including investors, financial institutions, society and business partners - to reinforce the Group's commitment to integrity, honesty and transparency.

The Group's training policy on business conduct is designed to educate members of the Board of Directors, management and other executives. These training programs cover key areas such as competition law, anti-corruption measures and ethical business practices. A strong emphasis is placed on ensuring that all employees - particularly those handling high-risk transactions - can identify potential fraud, bribery, or other forms of corruption and understand the appropriate course of action in such situations. Training sessions on these topics are conducted annually, with the Human Resources General Division overseeing their development and implementation. Additionally, the Compliance Unit provides support when needed, ensuring that employees are well-prepared to uphold the highest standards of integrity and ethical conduct.

The Sustainability Committee undergoes regular training on various Sustainable Development topics to remain informed about the latest advancements. The Group's Board ensures that both the initial onboarding and ongoing training of its members align with the procedures recommended by the Remuneration & Nomination Committee. This continuous development enhances each Committee member's ability to assess and address the impacts, risks and opportunities within the ESG framework. The Board of Directors (BoD) stays well-informed on these matters and following discussions with the Sustainability Committee, approves necessary actions. Additionally, the Committee remains actively engaged in monitoring the outcomes of materiality assessments and performance evaluations in specific ESG areas.

The compliance training sessions for 2024 included, among others, important topics related to corporate ethics and responsibility. In Q1/2024, training focused on the Code of Conduct & Corporate Responsibility, addressing issues such as corruption and bribery. In Q2/2024, employees underwent training on Whistleblowing, which includes the procedures for reporting misconduct, as well as instances of violations of the Code of Conduct. Finally, in Q4/2024, there was a training session for the members of the Board of Directors and its Committees as well as to the persons discharging managerial responsibilities on Conflict-of-Interest issues, aimed at ensuring decisions are made based on the company's interests, not personal ones. These sessions reflected a strong commitment to promoting ethical practices and maintaining a healthy work environment. For 2024, all functions within the Group are considered to have similar level of risk concerning corruption and bribery.

11.3.2 Management of Relationships with Suppliers [G1-2]

MOTOR OIL Group embraces a collaborative approach that fosters mutually beneficial relationships with its partners and suppliers, built on a foundation of trust, integrity and transparency. Recognizing the critical role of its supply chain in driving sustainable development, the Group is committed to minimizing social and environmental risks while setting a positive example for the industry and broader community.

As part of its supplier evaluation process, MOTOR OIL Group assesses candidates not only based on conventional factors such as cost, quality and delivery but also on QHSSE (Quality, Health, Safety, Security and Environment) and ESG (Environmental, Social and Governance) criteria. With a diverse supplier base - including raw material providers, contractors, service providers, equipment manufacturers and infrastructure partners - the Group prioritizes working with suppliers who share its commitment to sustainability and ethical business practices.

Currently, the Group is developing a Suppliers & Business Partners Code of Conduct alongside a Responsible Supply Chain Policy to reinforce ethical and sustainable practices throughout its supply chain. The Code of Conduct, designed for third parties such as business partners and suppliers, defines key contractual obligations and requires compliance with its principles. It also encourages partners to ensure that their suppliers, contractors and subcontractors adhere to the same standards. Meanwhile, the Responsible Supply Chain Policy highlights the Group's commitment to working with partners who uphold the values of sustainability, integrity, transparency and human rights protection, further strengthening the Group's responsible business practices.

The upcoming policy highlights the Group's approach to creating a sustainable value chain that not only addresses social and environmental risks but also aims to set a standard for ethical practices within the industry. By communicating the Supplier and Business Partners Code of Conduct and promoting sustainability, the Group emphasizes its commitment to responsible practices across its supply chain. The emphasis on human rights, legal compliance and the avoidance of illegal materials highlights a strong stance on integrity. Moreover, the Group actively integrates Environmental, Social and Governance (ESG) criteria into its supplier selection and evaluation processes, ensuring that partners align with these standards. The training and educational efforts for both employees and suppliers reflect an ongoing commitment to upholding ethical values, while the systematic collection of data and use of whistleblowing mechanisms serve as tools for accountability. Ultimately, the Group's policy of terminating partnerships that violate legal, ethical, or ESG guidelines underscores a zero-tolerance approach to non-compliance, reinforcing the importance of adhering to both local and international standards in sustaining a responsible and ethical value chain.

MOTOR OIL Group has established a comprehensive supplier and contractor evaluation process, ensuring strict compliance with quality, safety and sustainability standards. This multi-stage assessment begins with an initial review of submitted documentation, followed by on-site evaluations when further scrutiny is required or recommended by evaluation participants. These measures guarantee that all suppliers meet the Group's operational and ESG (Environmental, Social and Governance) requirements.

Through the structured Purchasing Organization, retail companies have successfully maintained long-term partnerships with zero rejections while securing high-quality suppliers. Similarly, companies within the Circular Eco & Alt. Fuels evaluates suppliers based on their ability to deliver products and services that meet defined quality specifications. In some cases, on-site inspections are conducted at raw material suppliers' facilities to identify potential gaps in production, warehousing, or distribution processes.

Companies in the RES sector also emphasize supporting local communities by collaborating with local contractors for most of its projects, while simultaneously engaging with large international suppliers to ensure the implementation of ISO 14001, 50001 and 9001 certifications, wherever applicable. MOTOR OIL Group evaluates its RES Key Suppliers (Critical) through a three-stage process: prequalification, assessment during the tender process and post-performance evaluation.

Vendors providing critical materials or services must complete a prequalification questionnaire covering management standards such as ISO certifications, child labor policies and sanctions, though no formal assessment is conducted at this stage. Major vendors are post-evaluated based on their field performance, with a particular focus on QHSSE criteria, especially health and safety

Specific entities within the Group have additional supplier requirements,

receiving assurances from suppliers that contractors have fulfilled employee contribution payments and adhere to environmental regulations for projects within company facilities.

following a structured pre-cooperation assessment, including an HSSE (Health, Safety, Security and Environment) questionnaire and on-site verification by an external partner. Additionally, Retail mandates:

- Compliance with ISO 14001 and other relevant ISO certifications.
- Annual contractor meetings for HSSE updates.
- Inclusion of contractor safety regulations in all tender documents.

By implementing these supplier assessment and compliance procedures, MOTOR OIL Group strives for operational excellence, environmental responsibility and sustainable partnerships across its supply chain.

11.3.3 Prevention and Detection of Corruption and Bribery [G1-3]

The Group is, committed to conducting business in accordance with the highest ethical standards and shows zero-tolerance in all forms of bribery and corruption. For that reason, the Group has set in force an Anti-Bribery and Anti-Corruption Policy and with great responsibility and business integrity, is committed to endeavor the utmost efforts for securing transparency and legitimacy.

Greece has ratified the UN Convention against Corruption with the Law 3666/2008, amending the Greek Penal Code. According to MOTOR OIL's Anti-bribery and Anti-Corruption Policy "The Policy abides by the applicable principles and provisions of the Greek Law and especially of the Greek penal code, which is consistent with the provisions of United States Foreign Corrupt Practices Act (FCPA) and the United Kingdom Bribery Act (UKBA)." The requirements of the UN Convention against Corruption are reflected in the enacting legislation which has been issued by its signatory states (including Greece). As a result, given that MOTOR OIL Group's Policy provisions are consistent with the Greek Penal Code which has incorporated the provisions of the UN Convention against corruption, MOTOR OIL Group's Policy is, in compliance with the Convention.

MOTOR OIL Group does not adhere to a specific animal welfare policy, as it is not applicable to its operations. The Group remains committed to following all relevant legal and ethical standards in its industry. Business Conduct Policies apply to all employees and management teams of the Group's companies, as well as to any parties representing any company of the Group or working on their behalf.

Additionally, the Group Code of Ethics and Corporate Responsibility ("the Code") establishes a robust framework for ethical conduct, transparency and integrity. The Group recognizes that corruption and bribery pose serious risks to business sustainability, regulatory compliance and stakeholder trust. Therefore, the Code sets out strict policies and actions aimed at preventing, detecting and addressing corruption and bribery across all levels of operation.

The Group Whistleblowing Policy also serves as a mechanism to prevent and detect any wrongdoings including corruption and bribery. In the anti-bribery and anti-corruption process, there are specific steps that should be followed for investigating potential breaches or concerns.

Upon receiving information or allegations of an incident, the Compliance Unit promptly records it, conducts an initial risk assessment and acknowledges written reports within three business days. Each case is evaluated for credibility, scale and severity to determine the appropriate response.

High-risk incidents are escalated to Top Management and the Head of Legal to assess potential exposure under bribery laws. With management's approval, the Compliance Unit collaborates with Internal Audit to investigate whether company controls failed, policies were violated, or disciplinary actions are required. Investigations may involve interviews, document reviews and external experts when necessary.

Findings are documented, corrective actions implemented, and the register updated. If appropriate, the original reporter is informed of the outcome. To maintain objectivity and independence, the investigation of corruption or bribery allegations is conducted by a dedicated internal investigative committee or external experts who are separate from the management teams responsible for implementing anti-corruption measures.

Upon conclusion, investigative results are formally reported to the relevant governing bodies, detailing findings, corrective measures and recommendations to enhance anti-corruption controls. The Compliance Unit ensures proper follow-up, including disciplinary actions, policy updates and training enhancements.

Within the process of the whistleblowing, the Reporting Management Committee (RMC) is responsible for managing and investigating reports within the organization, consisting of three key members: the Officer Responsible for the Receipt and Monitoring of Reports (ORRMR) or, if no ORRMR is appointed, the Group Compliance Officer, the Chief Human Resources Officer and the Director of Internal Audit. Depending on the results of the investigation, the ORRMR shall submit the investigation report to the Board of Directors and after consultation with the other members of the RMC, propose corrective actions to be taken. The final decision on the recommendations of the ORRMR shall be taken by the Board of Directors.

To strengthen internal controls, the Group has implemented monitoring mechanisms to detect and mitigate corruption risks. These mechanisms include regular audits, risk assessments and due diligence processes for third parties. Employees and business partners are required to disclose any potential conflicts of interest that may lead to unethical practices or improper advantages.

Training and awareness programs form a critical part of the Group's anti-corruption framework including the BoD. Employees receive ongoing education on recognizing and addressing bribery and corruption risks. The Group promotes a culture of ethical decision-making, ensuring that all personnel understand the severe consequences of engaging in corrupt activities, both legally and reputationally. The Compliance Unit, after the BoD approval, informs the Communications & Public Relations Division to upload at the Company's website the Policies, as foreseen by the legislative framework.

Moreover, the Compliance Unit uploads these corporate documents (including the relevant policy) at the Company's SharePoint. The training is conducted across the organization without taking into consideration the functions at risk. A key aspect of the training focuses on roles and responsibilities at different levels of the organization. Senior executives and the BoD receive specialized sessions emphasizing leadership in ethical decision-making and their duty to foster a corporate culture of compliance. Operational and functional teams receive targeted training tailored to their specific roles, ensuring that those involved in high-risk functions such as procurement, sales and finance understand the unique risks they may encounter.

Furthermore, the Group actively engages with regulatory authorities, industry associations and stakeholders to enhance anti-bribery measures and promote a corruption-free business environment. Cooperation with external entities strengthens compliance and reinforces the Group's commitment to ethical business conduct. The Code of Ethics and Corporate Responsibility is a dynamic document that evolves with regulatory changes and industry developments. The Board of Directors reserves the right to amend or update the Code upon recommendation from the Compliance Unit. Any modifications are communicated effectively to ensure continued adherence by all stakeholders.

During the reporting period, MOTOR OIL Group recorded zero convictions, fines, or confirmed incidents related to anti-corruption and anti-bribery laws. Additionally, there were no cases in which employees were dismissed or disciplined, nor were any contracts with business partners terminated due to corruption or bribery violations. Furthermore, there were no public legal cases filed against the Group or its employees in this regard.

11.4 Metrics

11.4.1 Incidents of Corruption or bribery [G1-4]

Description	2024
Number of convictions for violation of anti-corruption and anti- bribery laws	0
Amount **(€)** of fines for violation of anti-corruption and anti- bribery laws	0.00

11.4.2 Political Influence and Lobbying Activities [G1-5] (non-material)

Description	2024
Monetary political contributions **(€)**	0.00
In-kind political contributions **(€)**	0.00

11.4.3 Payment Practices [G1-6]

MOTOR OIL Group maintains structured and transparent payment practices across its business segments, ensuring clarity and consistency in supplier transactions. The Group's standard payment terms vary based on the nature of procurement and supplier category, with specific terms communicated to vendors through formal procurement documents. Furthermore, in specific cases, payment terms are established on a contractual basis, in addition to the standard payment practices.

In the Retail segment, the standard payment term is 90 days. Suppliers are informed of the payment conditions and processes through the RFQs sent to them, ensuring transparency and alignment with contractual agreements.

In the Circular Economy and Alternative Fuels segment, payments are typically processed under 25 days. The Group's approach in this segment is based on long-term relationships and market knowledge rather than a predefined methodology. Additionally, the company THALIS Environmental Services Single Member S.A., a technical firm within this segment, executes public works under contracts signed with the relevant public authorities. As a result, payments to subcontractors and suppliers are contingent on disbursements made by the respective public authority. Nevertheless, the company prioritizes payments to small and medium-sized enterprises, striving to fulfill its obligations to suppliers promptly and minimize delays. Supplier evaluation and selection are conducted based on technical specifications, which are received along with the tender documents accompanying each public procurement process.

Within the Renewable Energy Sources segment, the standard payment term is 30 days, with all RFx (Requests for Offer/Quotation/ Proposal) documents and contracts clearly communicating invoicing and payment milestones to vendors. For SMEs (Small – Medium enterprises) prepayment could be made upon request.

For Refining, Supply & Trading, payment terms are structured according to contractual terms. Based on the payment data from the group companies regarding payments to suppliers, the estimated average invoice settlement period is 29 days, with 53% of payments being made on time. It is important to note that, due to the diverse operations of several group companies, late payments do not constitute a breach of the agreed payment terms but rather reflect mutually agreed arrangements between the relevant parties. Consequently, the aforementioned results should be considered as indicative. The number of outstanding legal proceedings for late payments for 2024 is four (4).

Innovation and Digital Transformation | Policies, Actions and Targets

Emergency Preparedness | Policies, Actions and Targets

12 ENTITY SPECIFIC [ES]

12.1 Strategy

12.1.1 Material Impacts, Risks and Opportunities

MOTOR OIL Group actively drives innovation and digital transformation as key enablers of efficiency, performance improvement and long-term value creation. These initiatives aim to minimize negative impacts while amplifying positive contributions across economic, environmental and social dimensions. By integrating cutting-edge technologies and IT-enabled capabilities, the Group enhances operational effectiveness, streamlines processes and strengthens its competitive position in the evolving energy landscape. Additionally, the introduction of innovative products and services supports market growth and aligns with global sustainability trends.

A core material impact for MOTOR OIL Group is technological advancement and digitalization, which reinforce business agility and resilience. The IT Division, closely aligned with the Group's overall strategy, leads the implementation of state-of-the-art systems that optimize decision-making, enhance customer value propositions and facilitate the transition to a new energy era. These efforts contribute not only to operational efficiency but also to sustainability by enabling data-driven energy management, emissions reduction and improved resource utilization.

Further to that, security and emergency preparedness remain paramount for the Group, given the potential risks inherent in the oil and gas industry. Large-scale incidents could have severe consequences for human safety, the environment and business continuity. To mitigate these risks, the Group maintains rigorous security protocols, implements proactive risk management measures and ensures compliance with all relevant national and European regulations, including the Seveso-III-Directive (2012/18/EU). These efforts safeguard employees, local communities and corporate assets while maintaining the integrity of operations (more information provided in next paragraphs).

12.2 Impact, risk and opportunity management

12.2.1 Innovation and Digital Transformation | Policies, Actions and Targets

MOTOR OIL Group continues to drive technological advancement by strategically investing in cutting-edge IT systems that align with the Group's broader vision. The IT Division plays a pivotal role in this transformation, enabling business-driven technology initiatives that support the transition to a new energy era while enhancing the customer value proposition.

A testament to this commitment, MOTOR OIL's IT General Division – IT Success Stories showcases key projects, benchmarks and strategic initiatives, underscoring the Group's focus on continuous improvement and operational excellence. In 2024, the IT budget was allocated to a range of initiatives, with a significant percentage dedicated to innovation-driven projects that contribute to long-term sustainability and efficiency.

Reflecting the Group's emphasis on Environmental, Social and Governance (ESG) priorities, several projects undertaken in 2024 highlight the role of digital transformation in optimizing processes, strengthening governance and reinforcing sustainability-driven business strategies.

Lab - Samples management for packaging products

With this project it is successfully monitored the sampling of packaged products, printing barcode labels for samples, recording chemistry analysis results and implementing corrective actions. A mobile application is utilized to support field usage decisions, with the added functionality of photo capture for documentation purposes.

Hydrogen Modelling & Green certification

Green hydrogen comprises a strategic domain for MOTOR OIL Group. Strategy department of MOTOR OIL and HELLENIC HYDROGEN have worked together to contribute to techno-economical modelling, define automated tools required for enhanced evaluations and well as contribute to the certification requirements anticipated for green hydrogen production.

CRACOWI Project

CRACoWi is a European project that seeks to meet the escalating cybersecurity challenges in the European digital market. Cyber Resilience Act - Compliance – Wizard" is being developed by the CRACoWi consortium to support SME manufacturers, distributors and importers in meeting the cybersecurity prerequisites throughout the product supply chain. Wizard emphasizes cybersecurity from a product's inception through its lifecycle, offering automated CRA compliance assessments, documentation generation and enhanced product security. MOTOR OIL Group's IT Division created a real-world use case for the project by leveraging MORE's assets, providing access to its own substation for a pilot trial.

SPARCS Project

It successfully completed a 5-year European funded project named "Sustainable energy Positive & zero cARbon Communities". The overall goal of SPARCS was to demonstrate and validate innovative solutions for planning, deploying and rolling out smart and integrated energy systems that transform cities into sustainable, citizen-centered, zero carbon ecosystems that offer a high quality of life for urban residents.

RISE Project

Project RISE, initiated by the Energy Solutions and Strategic Projects division of MOTOR OIL in collaboration with CORAL, AVIN, CI and BFS, aims to assess the profitability of a hybrid PV, battery storage and EV charging solution at refueling stations. The project explores large-scale roll-out potential, focusing on energy production, storage and flexibility. Its goal is to optimize consumption, reduce energy costs, minimize environmental impact and improve facility efficiency using PV-generated energy. Additionally, new revenue streams have been identified through innovative energy solutions like dynamic tariffs and demand response services.

Establishing the AI Center of Excellence - AI Center Of Excellence

Group is focused on building a dedicated internal AI team to explore and harness the potential of artificial intelligence across various areas within NRG. The team will identify and implement AI opportunities to drive innovation and enhance operational efficiency. Key initiatives include:

- Preventive Maintenance
- Autonomous Stores
- Dynamic Pricing
- Stores Network Planning
- People Count / In-Store Journeys

- AI in Salesforce Marketing
- Energy Generation Forecasting
- HR SPOT

This AI-driven approach will ensure that NRG stays at the forefront of innovation, continuously improving its processes and customer offerings.

Energy Low Voltage Consumption Forecasting

By enhancing NRG's competitive edge with a robust tool, it reduces forecasting errors in consumption and optimize resource planning. This AI-driven forecasting system enables us to achieve a level of precision in predicting energy demand. It is a powerful solution with the potential to strengthen its market position and elevate its decision-making capabilities in an increasingly competitive landscape.

AVIN Voice of Customer

It collects real-time customer feedback through a variety of channels, including QR codes, SMS, in-app surveys and station-specific surveys tailored to meet the unique needs of each location. Feedback is captured from both Loyalty and non-Loyalty members, providing a comprehensive view of customer sentiments. Utilizing advanced analytics and live reporting, it helps, to monitor and analyze this feedback in real time, enabling informed decision-making and continuous improvement in the customer experience.

Food Waste Management

To address food waste across CORAL, AVIN and CORE INNOVATIONS retail sites, Group is implementing a multi-faceted approach aimed at reducing waste and enhancing sustainability efforts. A key strategy involves offering expiring products at discounted prices to encourage consumption before expiration. Additionally, it will leverage geolocation technologies to target customers effectively, ensuring they are informed of nearby discount offers. Through loyalty app, customers will receive timely notifications regarding discounted products, further incentivizing purchases. This initiative also aims to gather valuable sustainability insights, enabling the entity to continuously improve its waste reduction practices and drive more sustainable business operations.

12.2.2 Emergency Preparedness | Policies, Actions and Targets

Security and emergency preparedness are fundamental priorities for MOTOR OIL Hellas, given the inherent risks associated with the oil and gas sector. Large-scale incidents can have significant consequences for people, the environment and operations, while effective emergency response presents an opportunity to mitigate risks, ensure business continuity and safeguard employees, local communities and financial stability.

MOTOR OIL Group maintains a state of readiness across all functions, integrating stringent security measures and response protocols that align with national and European regulations. Compliance with the Seveso-III-Directive (2012/18/EU) underscores the company's commitment to accident prevention and impact mitigation, ensuring that even in the event of an incident, consequences on human health and the environment are minimized.

A clear demonstration of MOTOR OIL Group preparedness was evident in 2024 when a fire erupted in the southern section of MOTOR OIL (HELLAS) CORINTH REFINERIES S.A. in Agioi Theodoroi. Thanks to the prompt and coordinated efforts of both the Fire Department and refinery personnel, the fire was swiftly contained, preventing any threat to the surrounding area. During the fire incident three (3) members of the staff of a subcontracting company sustained minor injuries.

While the incident resulted in property damage, the Company was fully insured both with regards to property damages and the loss of operational profits due to the interruption of its operations. No danger exists for the Refinery area or the area surrounding it because of the fire incident.

MOTOR OIL Group continuously strengthens its security and emergency response framework, recognizing that preparedness is not just a regulatory requirement but a strategic imperative in protecting its workforce, communities and corporate reputation.

The requirements include:

- Notification of all concerned establishments
- Deploying a major accident prevention policy
- Producing a safety report for upper tier establishments
- Producing internal emergency plans for upper tier establishments
- Providing information in case of accidents

Emergency response plans

All MOTOR OIL Group's facilities have made emergency response arrangements based on the Emergency Response Plan (ERP). The ERP is regularly reviewed and updated to consider any changing legal requirements and revised "best practices", resulting from technical advancements, gained experience or from peers in dealing with minor or major accidents.

Moreover, the Group prepares and submits appropriate studies to the relevant authorities, in accordance with the EU Seveso III Directive, covering the most likely accident scenarios, as well as relative prevention and response measures.

The Emergency Response Plans outline public health protection measures, including warnings and relevant advice for neighboring communities, to be implemented if the plans are activated due to a major technological accident. These plans are drafted by the competent authorities and determine how the State might intervene in emergency situations. MOTOR OIL Group maintains an emergency response system at its facilities, which includes studies, procedures and different response plans depending on the situation (fire, earthquake, terrorist act, flood, etc.). It has also organized emergency teams (fire brigades, evacuation teams, etc.), training programs and preparedness exercises. Finally, it has a set of plans and processes (e.g., internal emergency plans, fuel shortage plan, Group emergency corporate plan, BCP, etc.) for all possible emergency situations.

MOTOR OIL has been strategically prepared to address the scenarios outlined in its emergency plans. Emphasizing the importance of continuous proactivity and preparedness, the Group has also implemented a Corporate Contingency Plan. The Corporate Contingency Plan is designed to assess the capabilities of each company within the group, encompassing both human resources and infrastructure. It further aims to identify the most effective ways to align these capabilities, ensuring that, in the shortest possible time, they can seamlessly integrate and contribute to addressing emergency situations that may threaten the operations of any company within the group.

For further protection of the interests, assets and functions of the Group, contracts include three types of insurance risks: cessation of activity, accident & gradual pollution, against third parties.

CORAL GAS carries out a thorough risk management assessment, which is performed on an annual basis at management team level and has as its scope the identification of potential risks, the evaluation of responses and the provision of detailed control actions.

To assess the risks associated with OFC's operations, in order, to better manage them, several preparedness exercises are performed, such as the large-scale exercise that takes place annually, in which OFC participates jointly with the Athens International Airport (AIA) and a periodic study on the Emergency Response Plan (ERP).

Security Operations management

To demonstrate and improve security in operations, MOTOR OIL designed a framework (certified in accordance with ISO 18788) for establishing, implementing, operating, monitoring, reviewing, maintaining and improving a Security Operations Management System. The framework aims to safeguard the respect for human rights, the national and international laws and the fundamental freedoms by meeting the Guiding Principles on Business and Human Rights of the United Nations "Protect, Respect and Remedy" framework policy 2011.

Privacy Protection

MOTOR OIL Group follows GDPR standards and thus, has the duty to safeguard the data of its staff and customers. The Group understands that data privacy is essential on building the confidence of its customers and expanding its business. Therefore, the Group has made privacy protection a key strategic goal for us, and it has implemented a thorough data protection management program, robust governance processes to safeguard the privacy and security of customer information and to adhere to privacy laws. Through Group's data protection management program, it has designated a Data Protection Officer and has created corporate policies and procedures governing the collection, use, retention and protection of data.

Data protection and Group's prioritized data privacy, achieved by involving experts in the design phase of projects involving personal data, developing and implementing safeguards against data breaches. The Group maintains comprehensive records of data processing activities. Has procedures for monitoring, identifying and responding to any event that can lead to a data breach. Have procedures in place for notifying authorities and affected individuals if needed.

Further, the Group conducts Data Protection Impact Assessments for high-risk processing activities. Furthermore, signs Data Privacy Agreements with all its data processors and defines data retention periods. It ensures compliance with Data Privacy Agreements, minimize data processed for analytics, define retention periods and prepare systems to delete personal data once the retention period ends.

MOTOR OIL Group provides GDPR training to its employees. A mandatory Group-wide GDPR training and awareness workshops, previously provided to its employees, covered all GDPR requirements, including, notably, the reporting and management of personal data breaches.

Cybersecurity

With the increase of connected devices, systems, platforms and services MOTOR OIL Group understands the need for a strong emphasis on cybersecurity to safeguard the opportunities created by this interlinked, data-driven energy model and comply with NIS2 Regulation and other EU Cybersecurity Directives and Regulations. Based on the above the Group has designated a Chief Information Security Officer who is referred to the Deputy CEO.

MOTOR OIL Group has a 3-year planned, approved and deliberate strategy to deal with cybersecurity risk. The safeguarding of the Group information and operation assets' confidentiality, integrity and availability as well as making dedicated investments to incorporate cybersecurity into every element of Group's business model to ensure resiliency is vital to the business.

MOTOR OIL Group has set up a comprehensive and consistent Information Security Management System (ISMS) to identify and apply a complete range of information and operation security controls within the overall structure of a coherent management system. Group's comprehensive approach to cybersecurity includes the establishment of specific procedures and the application of organizational and technical measures that are continuously checked, monitored, enhanced and operates within the scope of the Group's activities. To achieve specific security and business objectives, MOTOR OIL Group determines, implements, monitors, evaluates and improves these controls where necessary. As a result, MOTOR OIL's headquarters and refinery has achieved ISO/IEC 27001:2023 Certification.

To ensure that the Information Security Management System works effectively and improves over time, the Group developed a consistent method for measuring and evaluating its performance. This method applies to the Information Security Management System of MOTOR OIL Group. Every year, the Group evaluates and updates its security performance standards and compliance level and uses clear metrics to measure them, such as Key Performance Indicators (KPIs), Key Risk Indicators (KRIs) and Key Goals Indicators (KGIs).

MOTOR OIL Group employees are a key component in its first line of defense. So, the Group always ensure that all relevant personnel are aware of the criticality and importance of their information security responsibilities and how they can contribute to the achievement of the ISMS' objectives. To do this, the Group has a mature security awareness and education program, in which all employees are required to complete privacy and information security training on an ongoing basis, including privacy compliance, information lifecycle governance, managing information and data, creating a safe cyber environment and business continuity. MOTOR OIL Group's awareness and education program includes, Information security training modules (videos, newsletters), targeted security awareness training for high-risk audiences, monthly simulated phishing exercises and security awareness communications.

Business Continuity

MOTOR OIL Group has designed the Business Continuity Management System (BCMS) that develops business continuity appropriate to the amount and type of impact that the Group may or may not accept following a disruption.

The purpose of a BCMS is to prepare for, provide and maintain controls and capabilities for managing the Group's overall ability to continue to operate during disruptions. The Business Continuity Management System (BCMS) enhances the overall efficiency of Group's organization by enabling it to allocate the appropriate financial and human resources, ensuring the continued operation of the Group. Business Continuity Plan (BCP) is a system of prevention and recovery from potential threats and risks including cyber-attacks, pandemics, natural disasters, human errors. BCP ensures that personnel and assets are protected and are able to function quickly in the event of an emergency. The BCMS Group's has developed, meets the requirements set forth by ISO 22301 for its implementation, maintenance and continuous improvement. It also ensures alignment with the established business continuity policy, enabling the continued delivery of products and services at an acceptable predefined capacity during disruptions, while enhancing organizational resilience through the effective application of the BCMS.

During the development of BCMS, MOTOR OIL Group has,

identified critical business services and units of MOTOR OIL's HQ and Refinery, critical records, service providers per business unit, as well as the dependencies per business unit.

executed a Business Impact Analysis for all businesses processes.

established and documented a Business Continuity Policy as well as a set of policies, which are aligned to the business's strategic direction and reflect that the BCMS is supported and adequately resourced.

documented emergency plans to effectively address all emergencies identified. Emergency plans are accessible and clearly communicated to all personnel.

assigned the responsibility for emergency preparedness to different teams. Teams are responsible for planning, implementation and development of the Business Continuity Plan (BCP), for monitoring the established alert levels.

In conclusion, a robust Business Continuity framework is essential for ensuring the resilience and sustained operations of the MOTOR OIL Group, even in the face of unforeseen disruptions.
